ISSN 0333-6204

PREFACE

This publication summarizes data on tourism in Israel in 2011, which were processed at the Central Bureau of Statistics and outside it. Some of the data were previously published in periodicals of the Bureau, and some are presented here for the first time.

This publication also appears on the CBS website.

The publication is the result of a joint effort by the Central Bureau of Statistics and the Ministry of Tourism, which finances the surveys on accommodation services as well as this publication. Ms. Esther Sultan, Director of the Database and Statistics Division at the Ministry of Tourism, assisted in preparing the publication.

The Bureau wishes to thank all those who assisted in providing a supply of data, making it possible to collect and process the data presented here: The Israel Police, for providing information which served as a basis for data concerning the movements of Israelis and tourists at the borders; the Israel Hotel Association and all hotels and places of accommodation, which supplied data on accommodation services; the Society for the Protection of Nature, which supplied data on field schools; the Youth Hostels Association and the Israel Nature and Parks Authority. Special thanks are extended to rural tourism operators.

Simcha Bar-Eliezer
Senior Department Director
Economic-Business Statistics

Jerusalem, 2012

Staff of the Central Bureau of Statistics who participated in preparing the publication:

Directorate of the Bureau: Simcha Bar-Eliezer – Senior Department Director

Tourism Sector: Tilda Khait – Director of Sector – publication coordinator
Lena Ostrovsky
Nikol Amor
Osnat Levy
Shoshana Basher
Erez Trabelsi
Omry Romano

Department of Informatics: Elizabeta Rozenberg

Statistical Analysis Sector: Esther Salama

Survey Department: Eti Yaakov

Publication Sector: Iris Reuveni

CHAPTER VI: MISCELLANEOUS

77. Combined Factors (Seasonal and Prior Adjustment Factors) of Tourist Arrivals, Departures Abroad of Israelis and Person-Nights in Hotels, 2011 (Percentages)	181
78. Income and Value Added from Tourism Compared with Other Export Industries	182
79. Income at Israel Nature and Parks Authority Sites, by Type of Site	183
80. Visits in Israel Nature and Parks Authority Sites, by Site and District	184
81. Visits in Israel Nature and Parks Authority Sites, by Type of Site	188
82. Holidays or Trips Spent in Israel and Abroad, by Israelis Aged 20 and Over, by Selected Characteristics	189

	<u>Page</u>
83. Recognized Museums, Number of Exhibitions, Area and Number of Visitors, by Type of Museum.....	190
84. Number of Visitors in Recognized Museums, by Type of Museum.....	192
85. Number of Visitors in Recognized Museums, by Geographical Region.....	192
86. Governmental Grants and Investments in Tourism Industries	193
87. Licenced Tourist Guides	194
88. International Conferences and Exhibitions and Number of Participants from Abroad, by Month of Opening and Subject of Conference.....	195
89. International Conferences and Exhibitions, by Location of Conference	196
90. Graduates of Hotel Schools, by Profession	197
91. Shops Listed for Tourists, by Type of Shop and Locality	198

CHAPTER VII: INTERNATIONAL TOURISM

92. International Tourism, by Regions	203
93. International Tourist Receipts, by Regions	204
94. World's Top 10 Countries in Tourist Arrivals and in Tourism Receipts.....	205

INTRODUCTION

1. GENERAL

This is an annual publication, which summarizes data on tourism in Israel. The present publication summarizes data for 2011, which were processed by the Central Bureau of Statistics, the Israel Ministry of Tourism, and the World Tourism Organization (UNWTO). Some of the data have been published in periodicals of the CBS, and some are presented here for the first time. The publication also appears on the CBS website.

The main findings include data appearing in the Statistilite pamphlet, no. 129, "Tourism in Israel 1990-2011".

This publication consists of seven sections:

Chapter I includes tables on visitors from abroad and Israelis at border checkpoints. The tables were derived from data in the border checkpoint files.

Chapter II presents tables on aviation, which were derived on the basis of findings from the Transport sector of the CBS, and Chapter III presents a table from the Balance of Payments which includes data that are relevant to tourism.

Chapter IV focuses on accommodation services. Most of the tables relate to tourist hotels. In addition, there are data on "other" hotels, as well as data on all hotels (tourist hotels and other hotels), data on rural tourism (rural tourism at kibbutzim and collective moshavim, and private rural tourism), youth hostels that are members of the Youth Hostels Association, and field schools with youth hostels.

Chapter V relates to the survey "Hotels – Income and Expenditures" of tourist hotels. As of the publication "Tourism 2006", the survey findings are published in a separate chapter in the Tourism publication.

Chapter VI presents data on miscellaneous topics related to tourism, such as holidays and trips, visits to museums, international conferences and exhibitions, etc.

Chapter VII includes several tables on international tourism, which are based on the World Tourism Organization (UNWTO).

2. MAIN FINDINGS

INCOMING TOURISM

NUMBER OF VISITORS

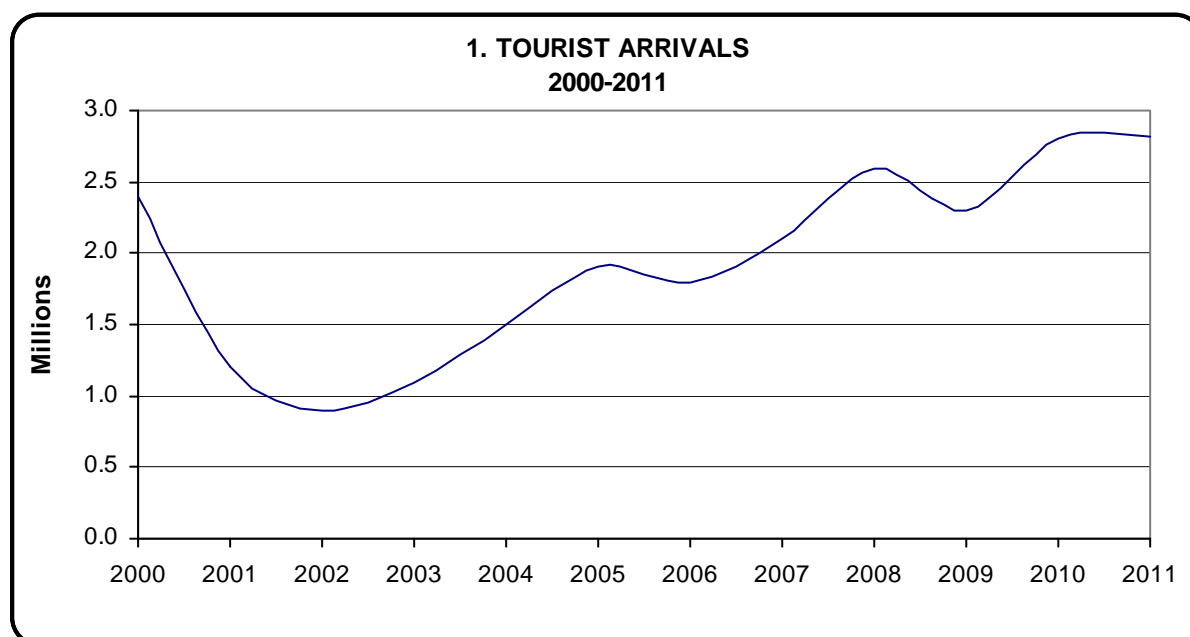

In 2011, the number of tourists in the world (about one billion according to UNWTO) was 5% more than in 2010. The main factors that led to the growth in world tourism were a rise in the standard of living and in hours of leisure time, and a decline in the costs of travel. The growth in tourism was accompanied by slow periods due to wars, terror attacks, economic crises, epidemics, and other causes.

In Israel, as in the rest of the world, there has also been a general upward trend in tourism which has been accompanied by slow periods. In the 1950s, the average annual number of tourist arrivals amounted to 47,000. In 2000-2011, the total number of tourist arrivals was 1.9 million. Since the establishment of the State of Israel, there have been approximately 62 million tourist arrivals, and 84% of those tourists arrived over the past three decades.

Israel's attractiveness as a center of tourism can be attributed to the large number of religious, natural, and cultural sites which are concentrated in a small area, as well as to the extensive tourism infrastructure and temperate climate.

The most serious tourism crisis in Israel was at the turn of the 21st century. The expectation for rapid growth in incoming tourism to Israel in 2000 was upset by the outbreak of the Second Intifada (2001-2003). Afterwards, there was a steady recovery in rates of tourism – except during the second half of 2006 (as a result of the Second Lebanon War) and at the beginning of 2009 (as a result of "Operation Cast Lead"¹).

There were 2.8 million tourist arrivals in 2011, similar to the number of tourist arrivals in 2010.

¹ Operation "Cast Lead" took place in January 2009, and affected incoming tourism during the first half of 2009.

86% of the tourists in 2011 arrived by air, and 14% arrived by land border check points. In addition to tourists, day visitors arrive in the country – persons who enter and leave the country the same day. In 2011, there were 238,000 arrivals of day visitors by land (a decline of 41% compared with 2010, evidently due to the unrest in Egypt at the beginning of 2011), 237,000 arrivals by sea (an increase of 41% compared with 2010), and 67,000 arrivals by air (a decline of 6% compared with 2010). The total number of day visitors to Israel in 2011 was 542,000 – 16% less than in 2010.

Table A.- Visitor Arrivals, by Mode of Travel
2011

	Total	Tourists	Day visitors
	Thousands		
All arrivals	3,362	2,820	542
By air	2,505	2,438	67
By land	620	382	238
By sea	237	-	237
	Percentage of change 2010/2011		
All arrivals	-2	1	-16
By air	5	5	-6
By land	-30	-22	-41
By sea	41	-	41

CHARACTERISTICS OF VISITORS¹

Sixty percent of all tourist arrivals in 2011 were from European countries, 28% were from American countries (21% from the US), 8% were from Asia, 3% were from Africa, and 1% from Oceania. Until the early 1970s, most tourists were from America, and in later years more than half were from Europe.

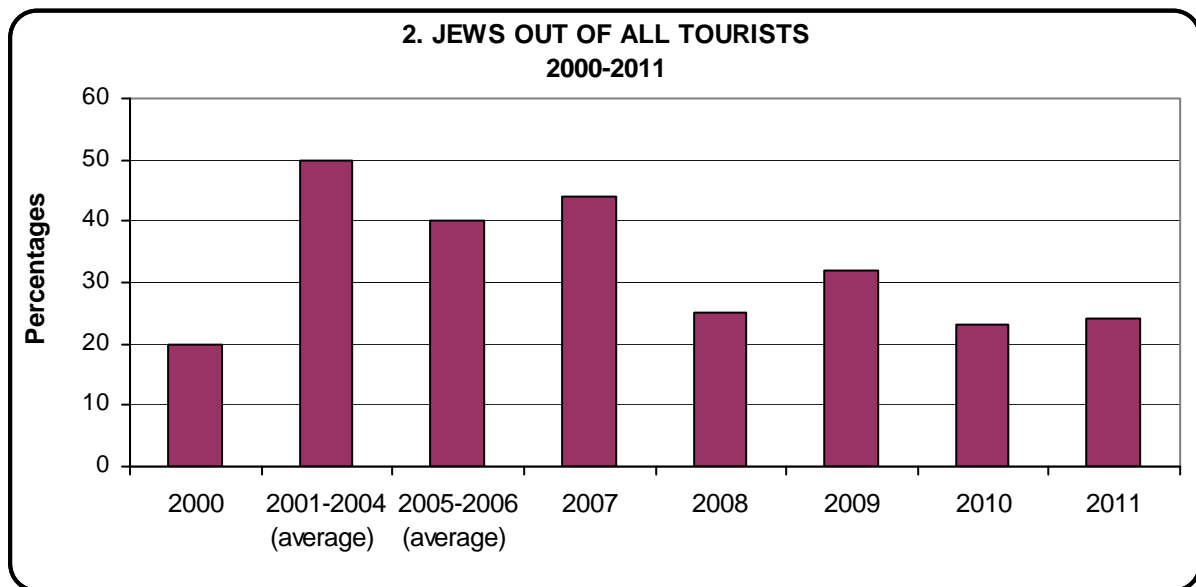

**Table B.- Tourist Arrivals, by Country of Origin
2000-2011**

Country of origin	2000	Average 2001- 2004	Average 2005- 2006	2007	2008	2009	2010	2011	% change 2010/ 2011
Total – thousands	2,417	1,157	1,864	2,063	2,560	2,321	2,803	2,820	1
Total – percentages	100	100	100	100	100	100	100	100	
Thereof:									
USA	20	24	26	26	23	23	22	21	-4
Russia	7	4	4	6	8	10	11	13	11
France	8	15	15	12	10	11	10	10	-2
Germany	7	5	5	5	5	6	6	6	0
United Kingdom	8	11	9	8	7	7	6	6	0
Italy	3	2	4	4	5	5	5	4	-25
Ukraine	2	2	2	2	2	2	2	4	93

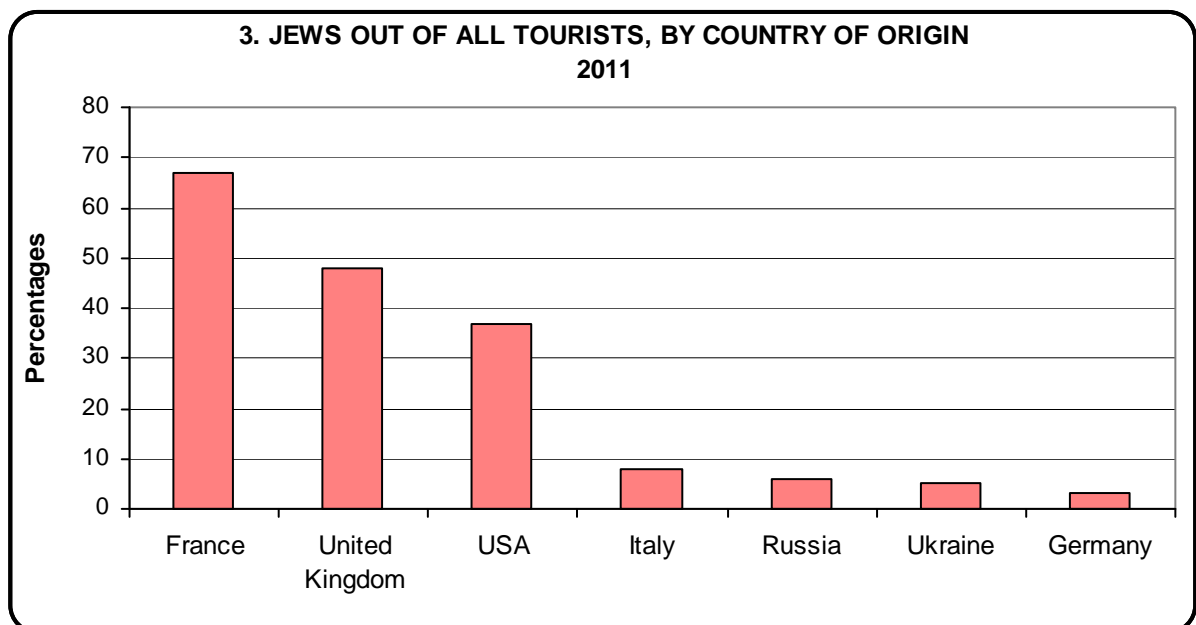

Citizens of Russia constituted the 44% of the day visitors who arrived by air and by land. The largest group of day passengers who arrived by sea (cruise passengers) consisted of citizens of the United Kingdom and Germany (19% of the arrivals from each country), and citizens of the United States (18%).

¹ Data on religion of tourists were obtained from a survey conducted for the Ministry of Tourism among tourists who departed the country in January-June, 2011.

In 2011, Jewish tourists constituted 24% of all tourists, similar to 2010.

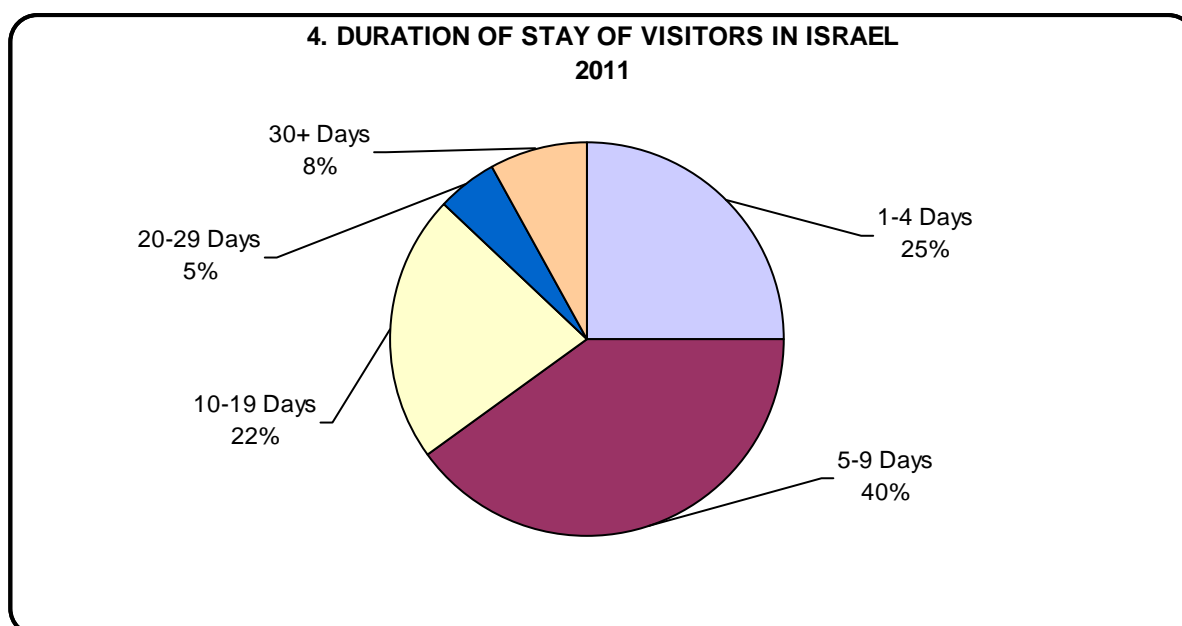

There are differences in the share of Jews among tourists from various countries of origin. Out of all French tourists in 2011, Jews constituted 67%, whereas the share of Jews out of German tourists was only 3%.

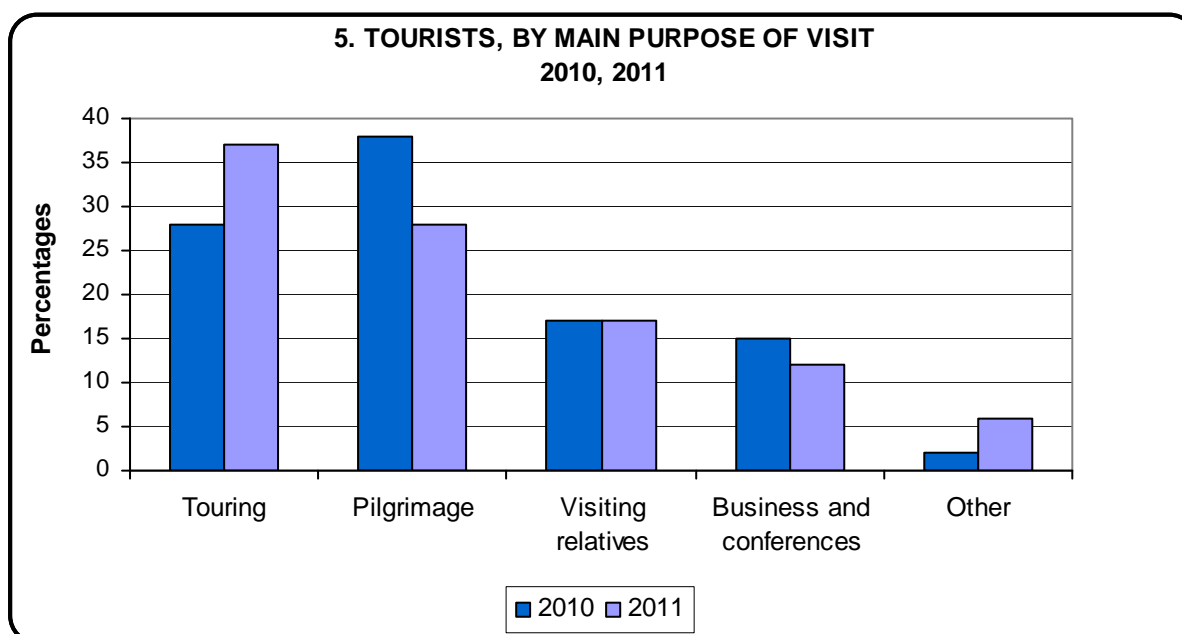

CHARACTERISTICS OF VISITS¹

Ninety-two percent of all tourists who arrived in Israel in 2011 stayed in the country less than one month. Their stay lasted an average of 8.1 days (7.9 days in 2010).

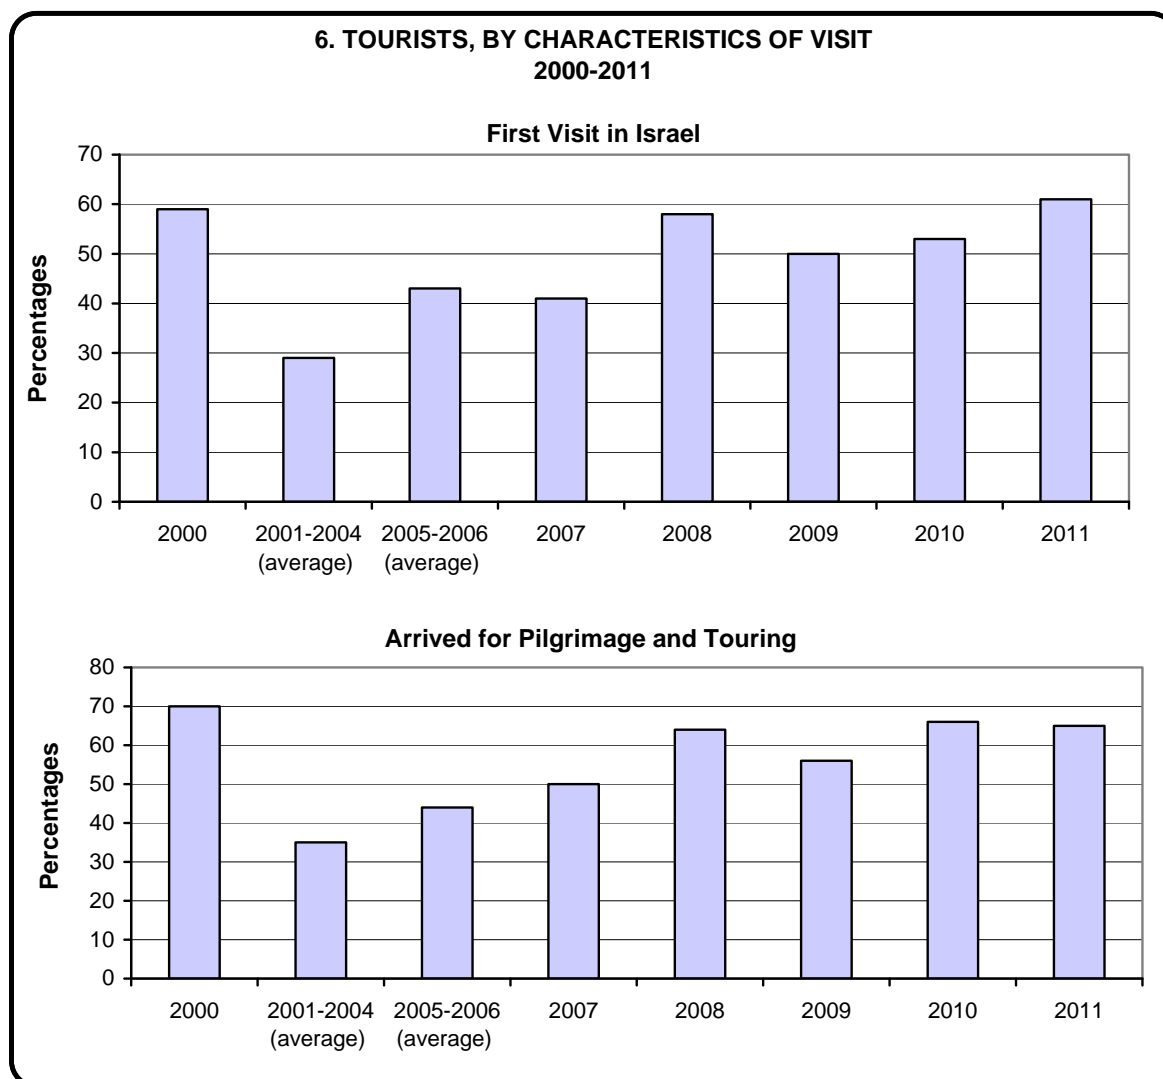

The share of tourists who visited Israel for religious reasons in 2011 was 28% (compared with 38% in 2010).

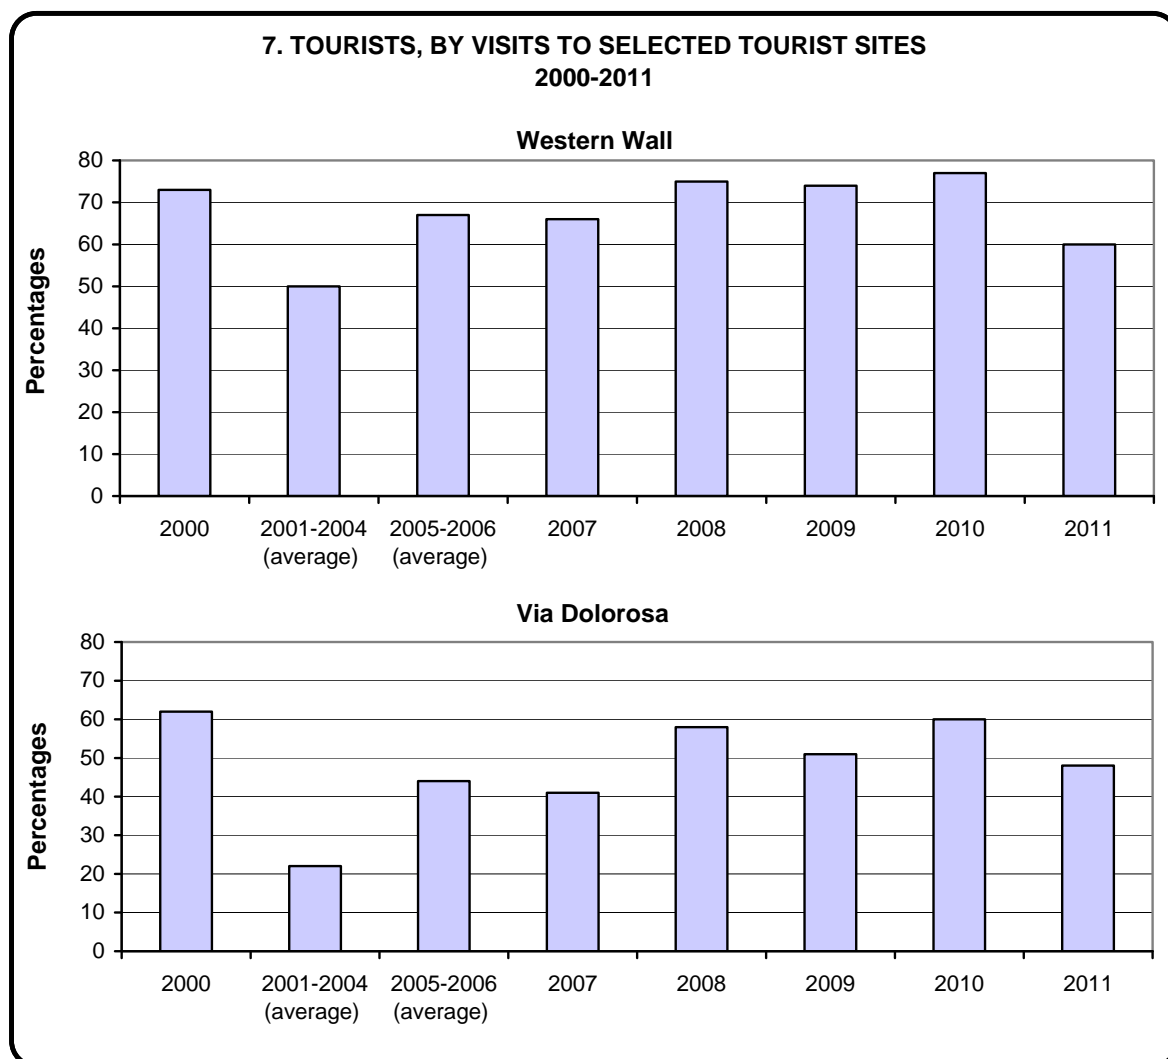

¹ Data were obtained from a survey conducted for the Ministry of Tourism among tourists who departed the country in January-June 2011.

With the recovery in tourism that followed the slump in 2001-2003, there has been a steady increase in the share of tourists who arrived in Israel for the first time (61% in 2011), as well as an increase in the share of tourists arriving on package deals and organized tours (62%), and in the share of tourists who arrived for recreation and for religious reasons (65%). However, the share of tourists who visited relatives declined.

Eighty percent of all tourists visited Jerusalem, 66% visited Tel Aviv-Yafo, 55% visited the Dead Sea, 45% visited Tiberias and the Sea of Galilee, 21% visited Haifa, and 14% visited Elat. Sixty percent of all tourists visited the Western Wall, 48% visited the Via Dolorosa, and 36% visited Massada.

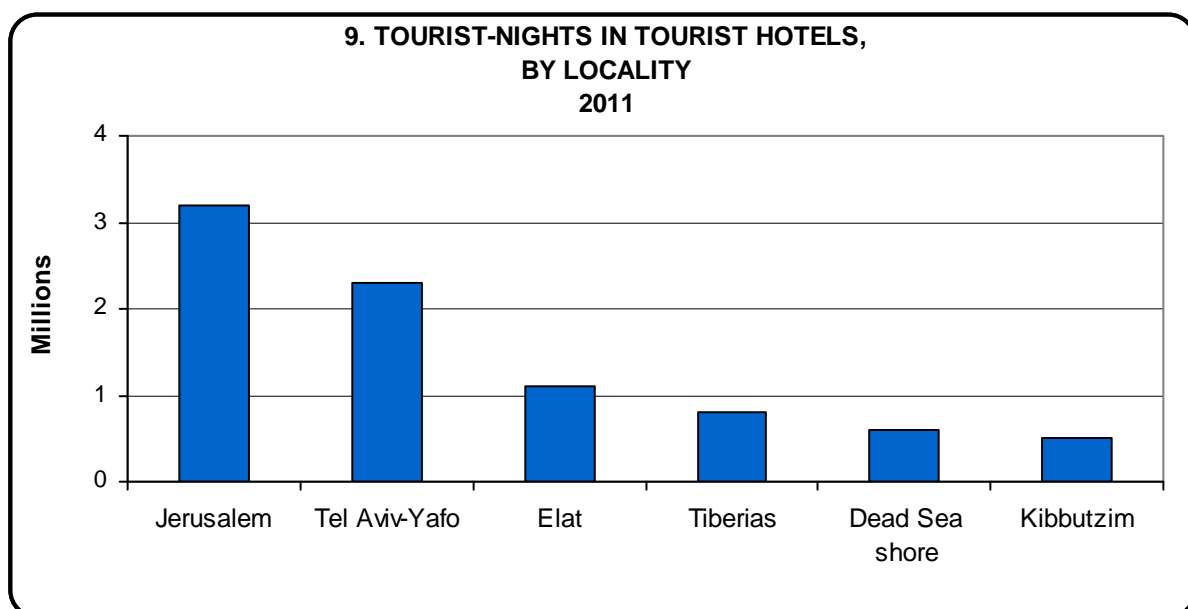

TOURIST-NIGHTS¹

In 2011, the number of tourist-nights in tourist hotels amounted to about 10 million, similar to 2010. This number is 2% lower compared with the peak year of 2008.

Between 1990 and 2000, tourist-nights comprised 53% of all person-nights in tourist hotels on the average each year. In the slump years of 2001-2003, the share of tourist-nights out of all person-nights in tourist hotels decreased to 22% on the average each year. Afterwards (except for 2009), the share of tourist-nights rose. In 2008, the share of tourist-nights reached 45% on the average each year (and in 2011, it reached 46%).

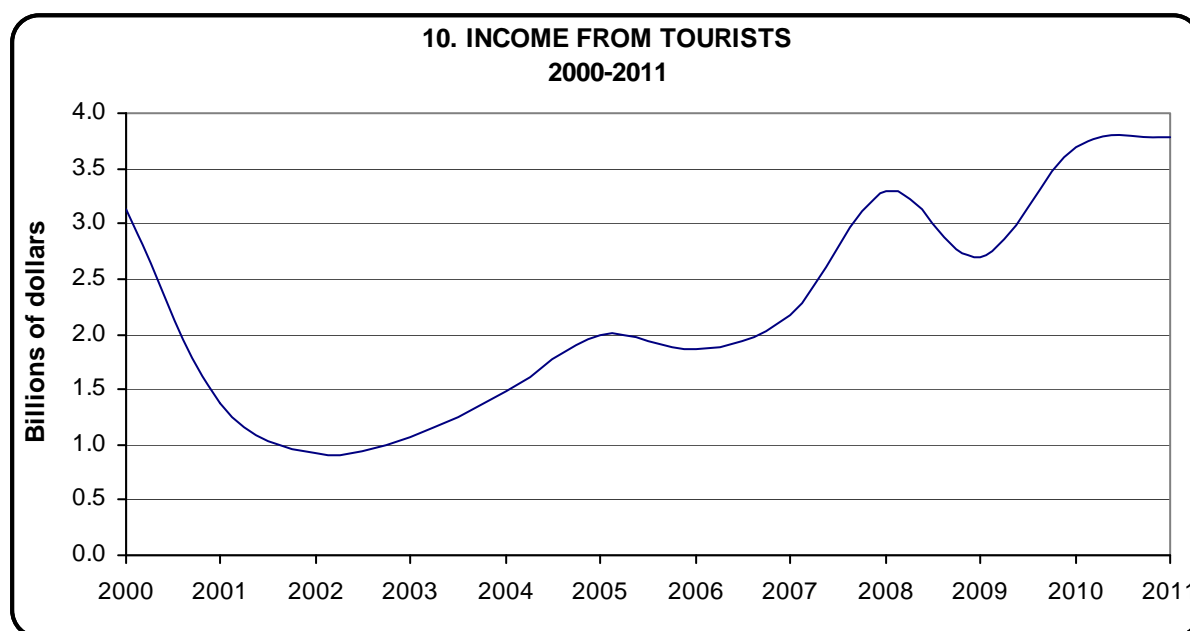

More than half of all tourist-nights in Israel in 2011 were in Jerusalem and in Tel Aviv-Yafo; In Jerusalem, the number of tourist-nights was 3.2 million (32% of all tourist-nights) and in Tel Aviv-Yafo the number was 2.3 million (23%).

¹ Person-nights of foreign tourists in tourist hotels (recommended by the Ministry of Tourism).

In Jerusalem and in Tel Aviv-Yafo, tourist-nights constituted approximately 82% of all person-nights in tourist hotels; in Netanya – 69%; in the kibbutzim – 35%; in the Dead Sea area – 25%; and in Elat – 16%.

INCOME FROM TOURISM^{1 2 3}

In 2011, income from tourists totaled \$3.8 billion – an increase of 2% compared with 2010 (\$3.7 billion).

The average expenditure of a tourist visiting Israel in 2011 was \$1,325 (including amounts paid abroad).

The average expenditure of a tourist from North America was \$1,782, from South America and Central America - \$1,719, from Europe - \$1,165, from Asia - \$1,044, and from Africa - \$970.

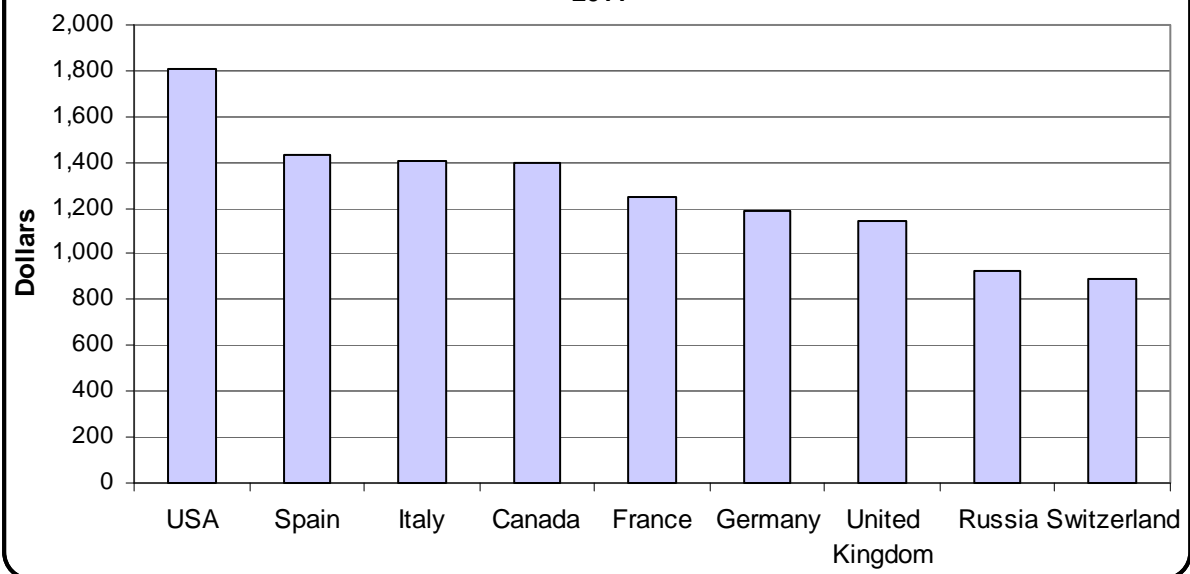

Fifty-five percent of tourist expenditures in Israel were for hotels and other accommodations, 11% for shopping, 12% for transportation, 12% for food and beverages, and 10% for other expenses.

¹ Income from tourism is listed in current prices in dollars. Some of the changes in financial data over the years may derive from fluctuations in the dollar exchange rate. In 2010, the dollar exchange rate was approximately NIS 3.7 per dollar, and in 2011 it was approximately NIS 3.6 per dollar.

² Excluding income of Israeli air carriers from air fare of tourists.

³ The estimate of Israel's income from tourism is based on the average expenditure per tourist.

**11. EXPENDITURE OF A TOURIST IN ISRAEL, BY COUNTRY OF ORIGIN
2011**

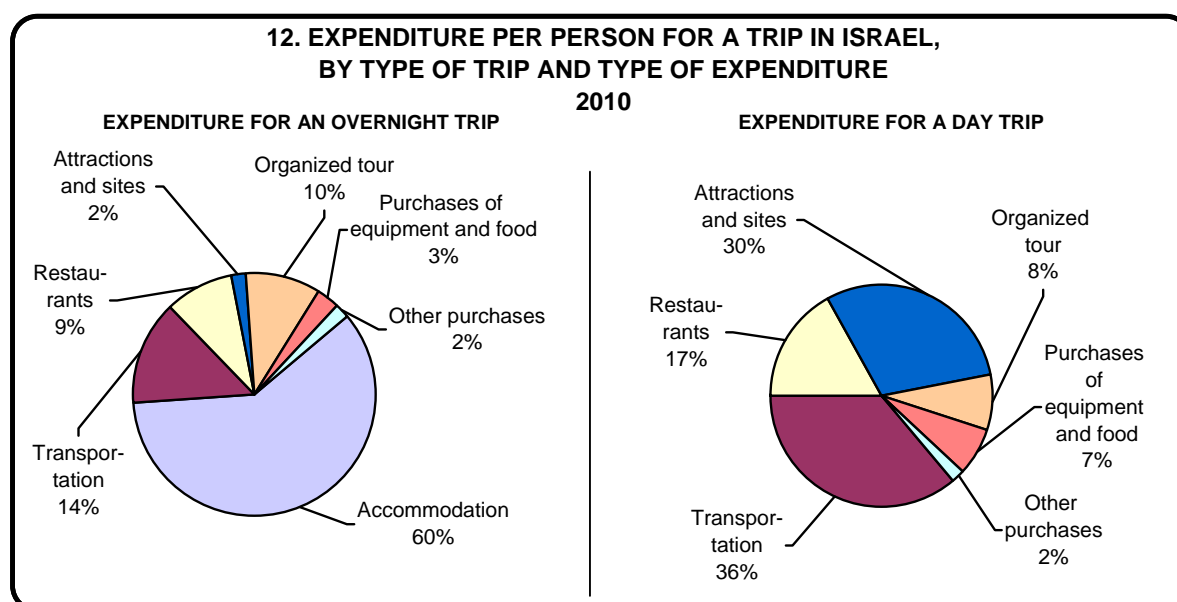

DOMESTIC TOURISM

TRIPS^{1 2}

Domestic tourism refers to trips made by Israelis in Israel. These include day trips (58% of all trips²), as well as overnight trips in which the tourists spend person-nights in accommodation services or stay at the homes of friends and relatives, or stay elsewhere (42% of all trips).

Accommodation services include hotels (tourist hotels and other hotels), rural tourism, youth hostels, and field schools.

In 2010, the average expenditure per person was NIS 88 for a day trip in Israel, and NIS 740 for an overnight trip in Israel. Regarding overnight trips, the expenditure for accommodations comprised 60% of the total trip expenditure. 12% of the expenditure for overnight trips was financed by the employer.

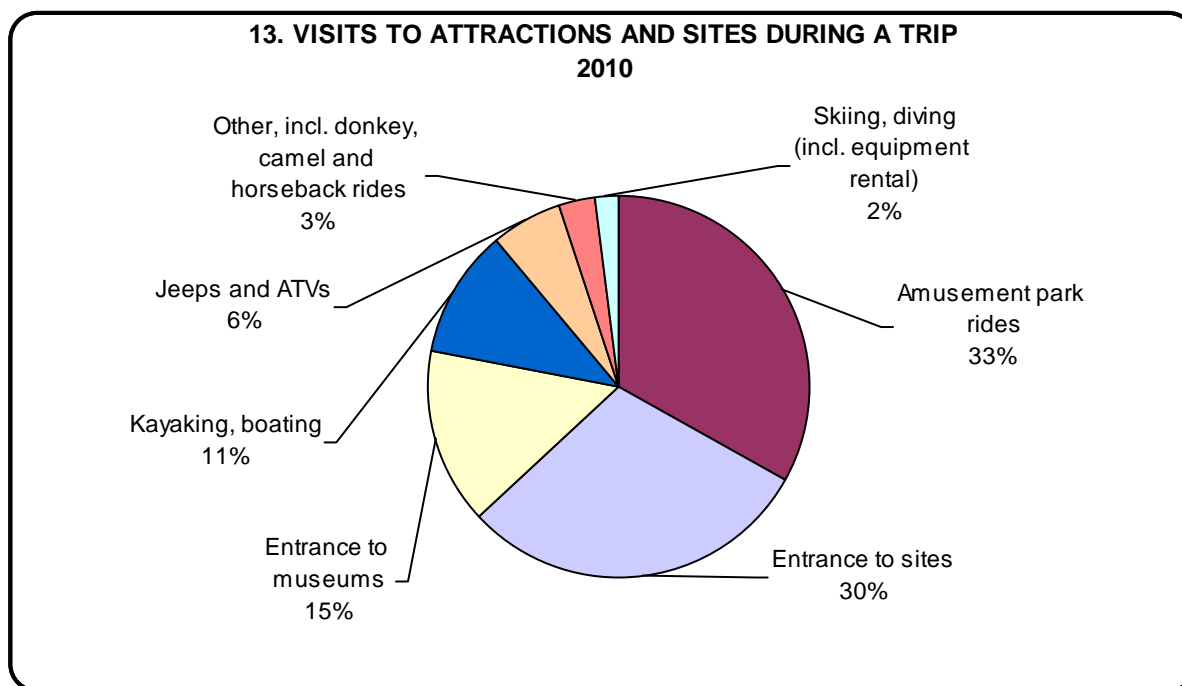

Thirty-three percent of all visits to attractions and sites during a trip were entries to amusement park rides, 30% were entries to sites, and the rest were visits to other attractions.

Trips made by residents of the Central District and Tel Aviv District comprised 48% of all trips made by Israelis. This was higher than the percentage of residents of these districts in the overall population (41%). The share of trips made by residents of the Northern District was 11% - lower than the percentage of residents of these districts in the overall population (16%).

¹ The data are based on the findings of the Social Survey 2010 and the Household Expenditure Survey 2010, conducted by the CBS.

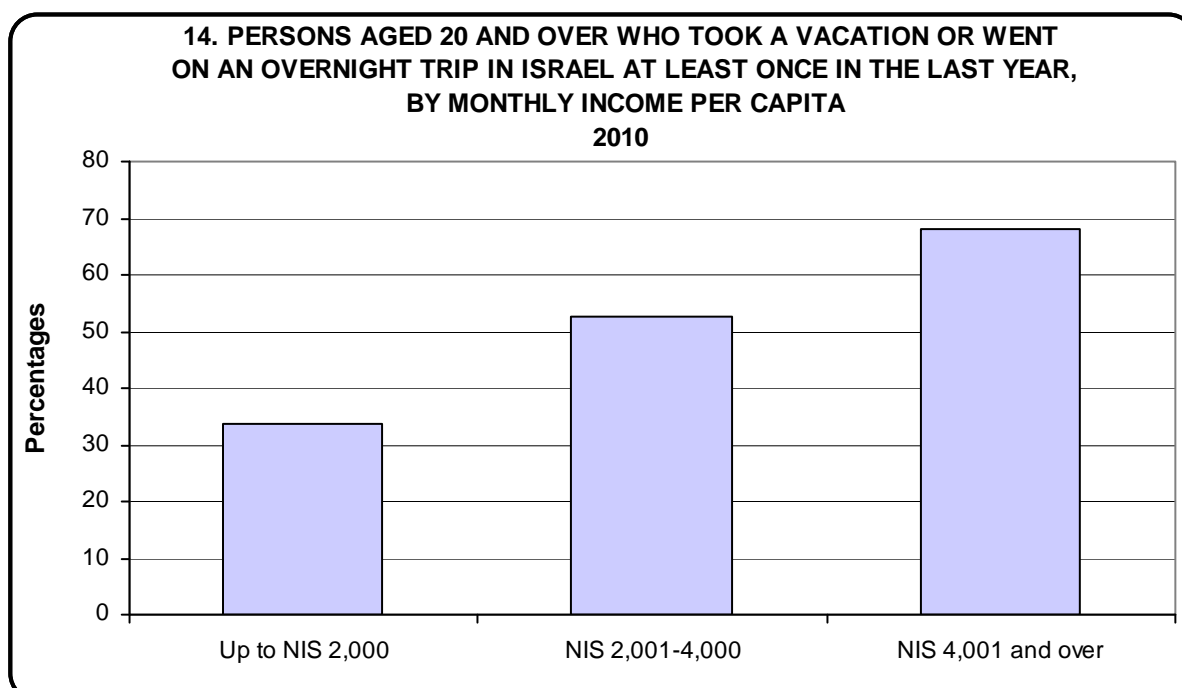

² It is possible that day trips were under-reported, because people are more likely to forget these trips than overnight trips.

The primary means of transportation for trips in Israel was a private car (78%); 13% of the travelers used a bus, and approximately 2% used a rented car. The rest used other means of transportation.

OVERNIGHT TRIPS

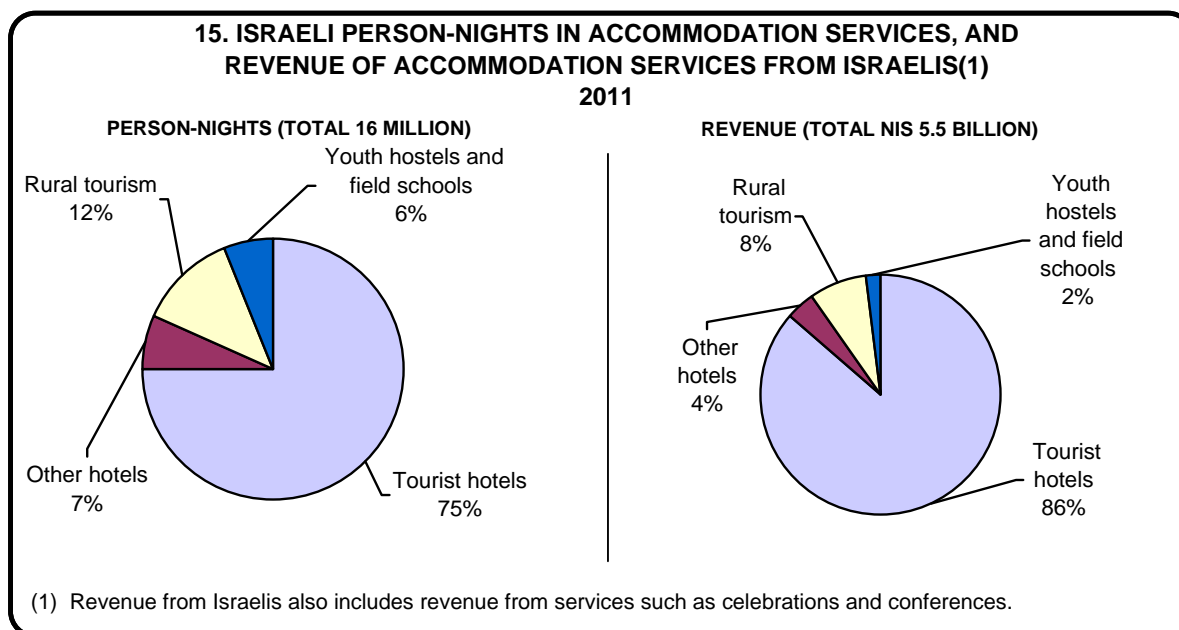

Approximately 50% of the Israelis aged 20 and over go on at least one overnight trip in Israel every year. The percentage of persons who go on overnight trips decreases with age – 59% of those aged 20-40, 52% of those aged 45-64, and 32% of those aged 65 and over. The percentage of those who go on trips increases with income.

Ninety-three percent of all overnight trips made by Israelis were for the purpose of travel and vacation, 4% were visits to friends and relatives, and 3% for business.

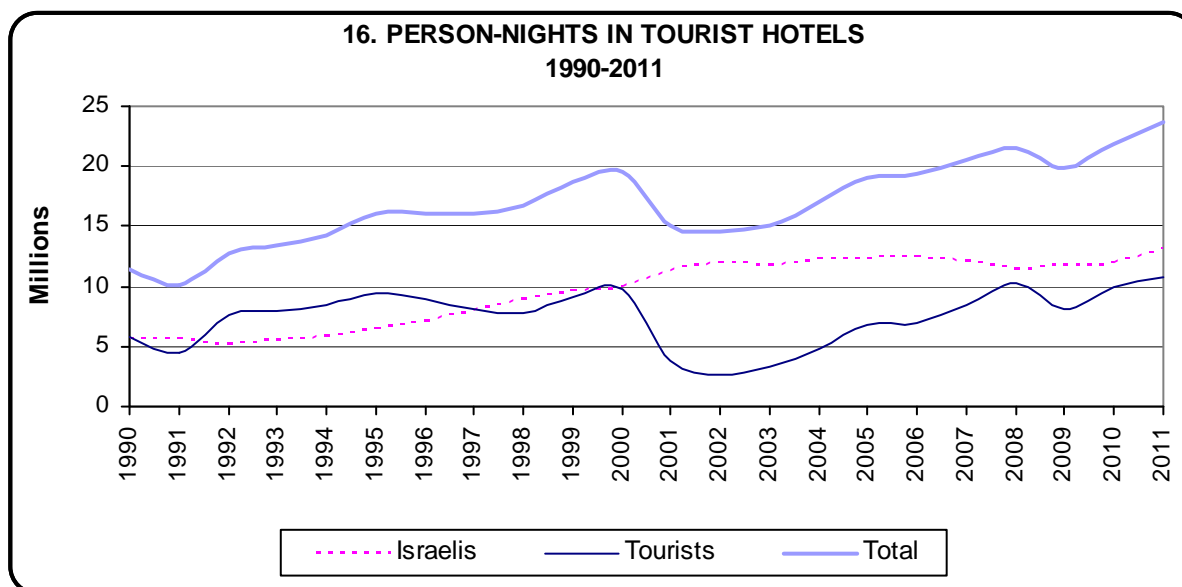

PERSON-NIGHTS

In 2011, Israelis went on approximately 6 million overnight trips in accommodation services in Israel. The number of person-nights in accommodation services in these trips was 15.9 million. The average number of person-nights per trip was 2.7. An additional 1.7 million person-nights were in the homes of friends and relatives.

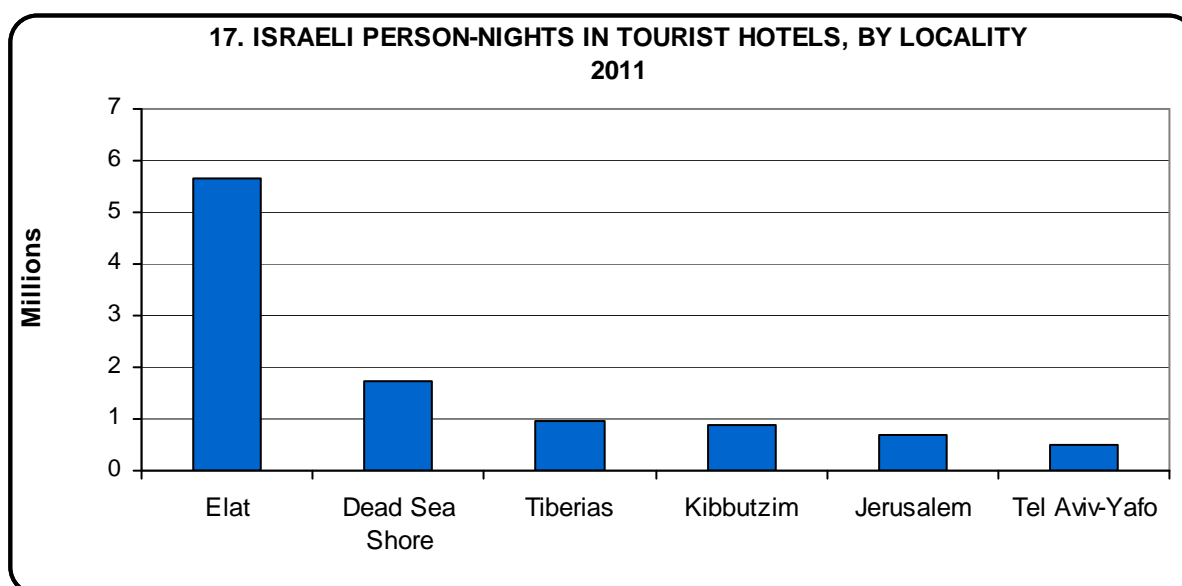

Person-nights of Israelis in tourist hotels comprised 75% of all Israeli person-nights at the various types of accommodation services.

Unlike the fluctuations in the number of tourist-nights in 1990-2011, there was an overall upward trend in the number of Israeli person-nights in tourist hotels. From 1990 to 2002, the number of Israeli person-nights doubled (from 5.6 to 12 million), and since then it has been stable with slight fluctuations. In 2011, the number of Israeli person-nights was 11.9 million. Since 1997, the number of Israeli person-nights has remained higher than that of tourist person-nights.

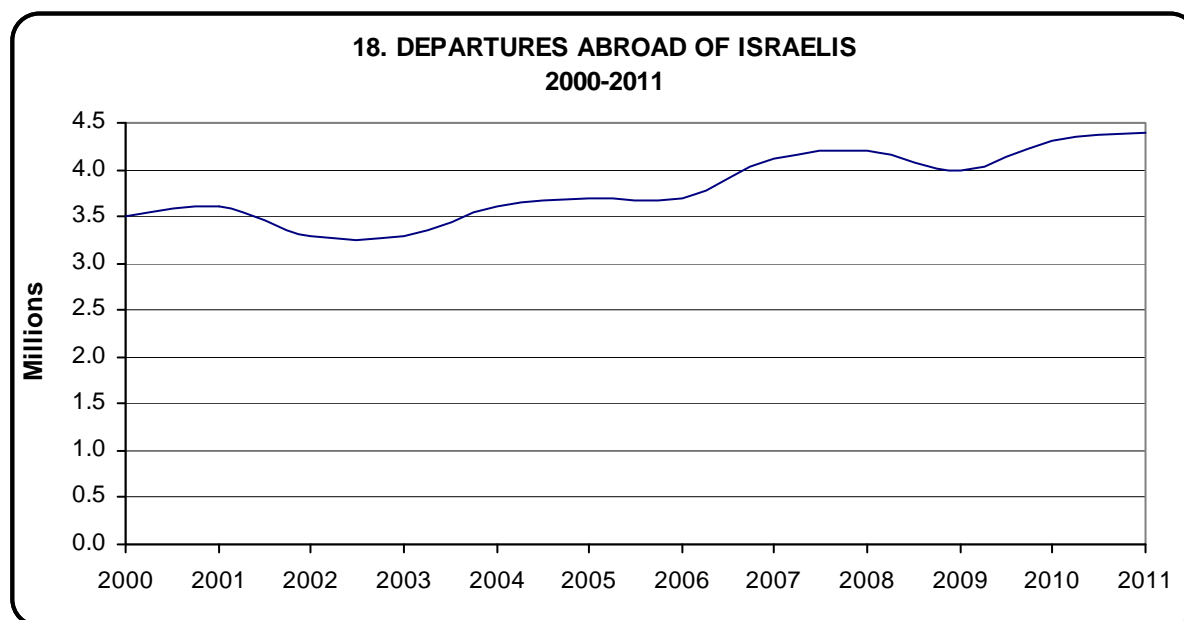

Almost half (48%) of all Israeli person-nights in tourist hotels in 2011 were in Elat; 14% were on the Dead Sea Shore, 8% were in kibbutzim, 8% were in Tiberias, 6% were in Jerusalem, 4% were in Tel Aviv-Yafo.

DEPARTURES ABROAD OF ISRAELIS

In 2011, 2.4 million Israelis departed abroad – 4% more than in 2010. 1.6 million of them departed abroad once, and 800,000 departed twice or more during the year. The number of departures abroad of Israelis in 2011 was 4.4 million (3% more than in 2010). By comparison, during the course of 2011 the population of Israel increased by 1.8%.

Eighty-eight percent of all departures abroad were by air, 10% were by land, and 2% were by sea.

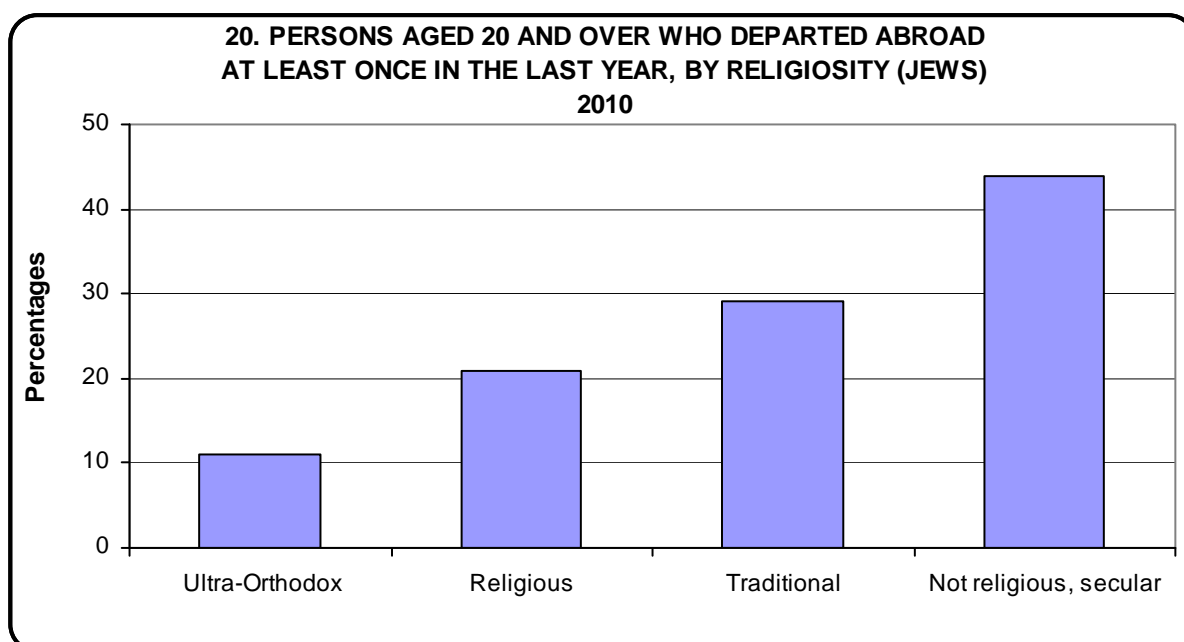

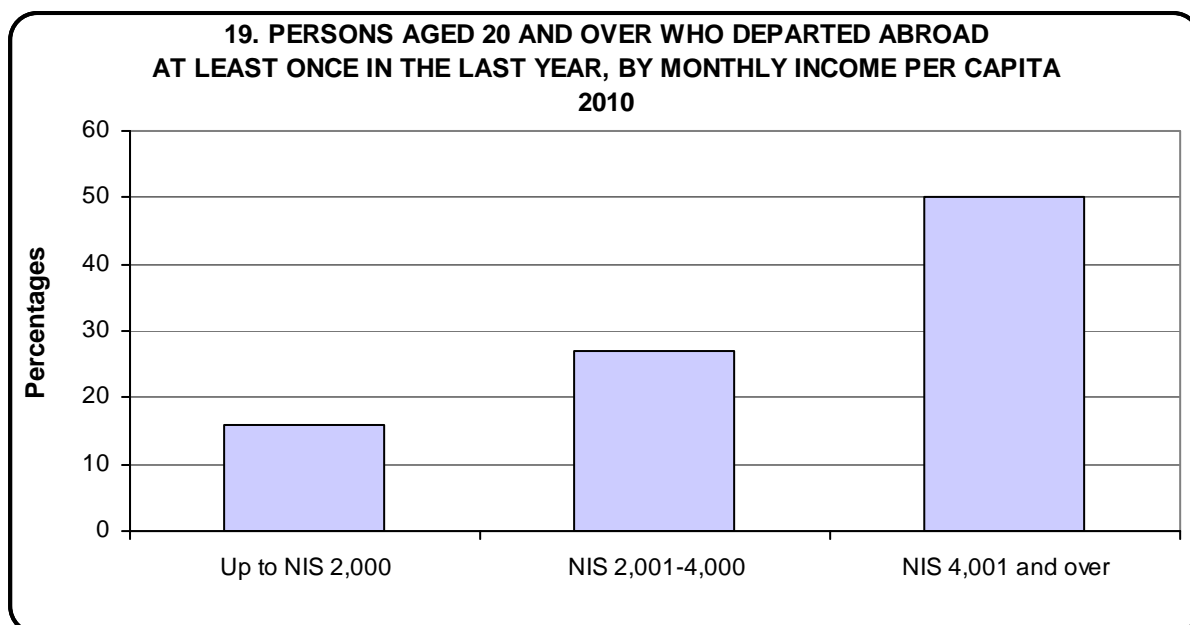

Of all departures by land, 60% were through border crossings to Jordan and 40% through Elat (Taba). Of all departures by sea, 82% were through Haifa and 16% were through Ashdod.

In July and August, there were approximately 1.2 million departures – 28% of all departures.

In 2011, about 10% of all departures (455,000) were of children aged 0-14. During the summer months (July-August) of that year 18% of all departures were of children.

In 2011, 4% of all departures abroad and 40% of the departures abroad by land (179,000 departures) were to Sinai. The number of departures to Sinai in 2011 was 19% lower than in 2010, evidently as a result of the revolution in Egypt and the constant warnings issued by the Israel Counterterrorism Bureau. The peak years of departures to Sinai were 1999 and 2004 (close to 400,000 each year), and the slump year was 2001 (approximately 100,000).

In 2011, there were 4.4 million returns of Israelis from abroad. Of those, 30% were after a stay lasting up to 4 days, 57% were after a stay of 5-29 days, and 13% were after a stay of 30 days or more.

In 2010, 31% of the persons aged 20 and over reported that they went on a vacation or a trip abroad at least once during the last year.

ACCOMMODATION SERVICES

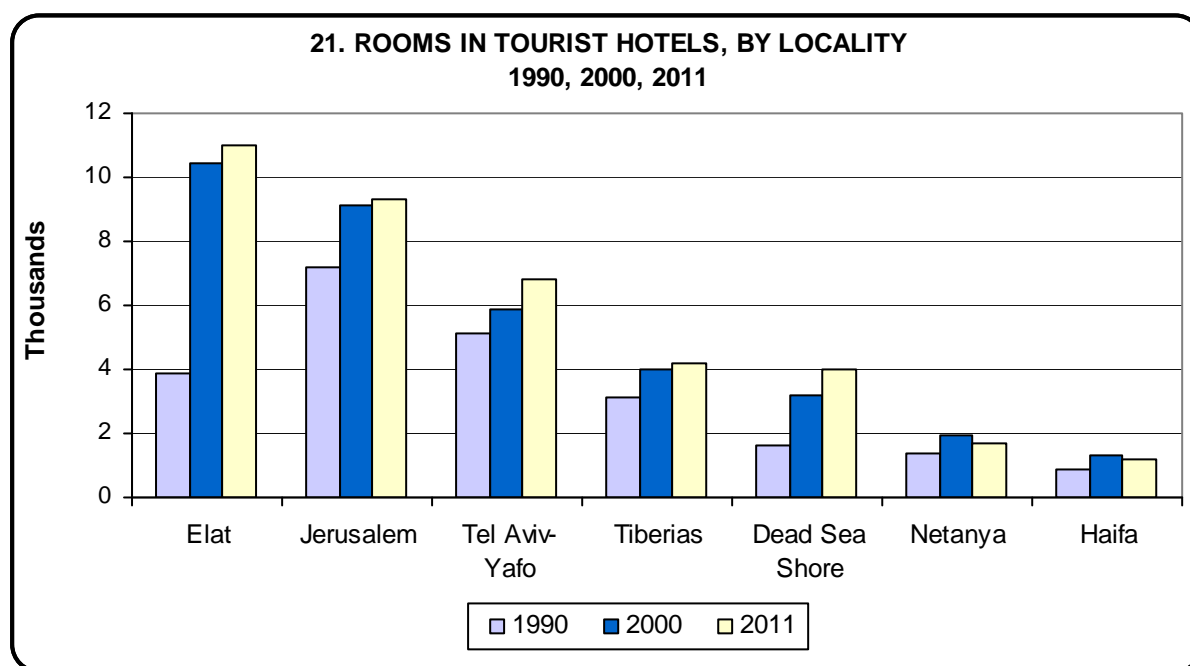

ROOMS IN TOURIST HOTELS^{1 2}

In the 1990s, following an increase in the number of tourists from abroad and Israeli tourists, and in light of expectations for a record number of tourists in 2000, a large number of rooms were built in tourist hotels. From 1990 to 2000, the number of rooms increased by 53%. However, the intensive construction of hotels decreased sharply in 2001, following the outbreak of the second Intifada. Between 2001 and 2011, there was almost no change in the number of rooms.

Rooms in tourist hotels (337 hotels, 47,000 rooms) comprised 78% of all accommodation rooms in Israel in 2011. The rest of the rooms were in other hotels (6%), youth hostels (2%), Christian hostels (2%), rural tourism (12%), and field schools (1%).

The average number of rooms per tourist hotel increased from 34 in the early 1960s to 141 in 2011.

In tourist hotels, the average number of beds per room is 2.4, compared to 3.7 in rural tourism accommodations, field schools, and youth hostels.

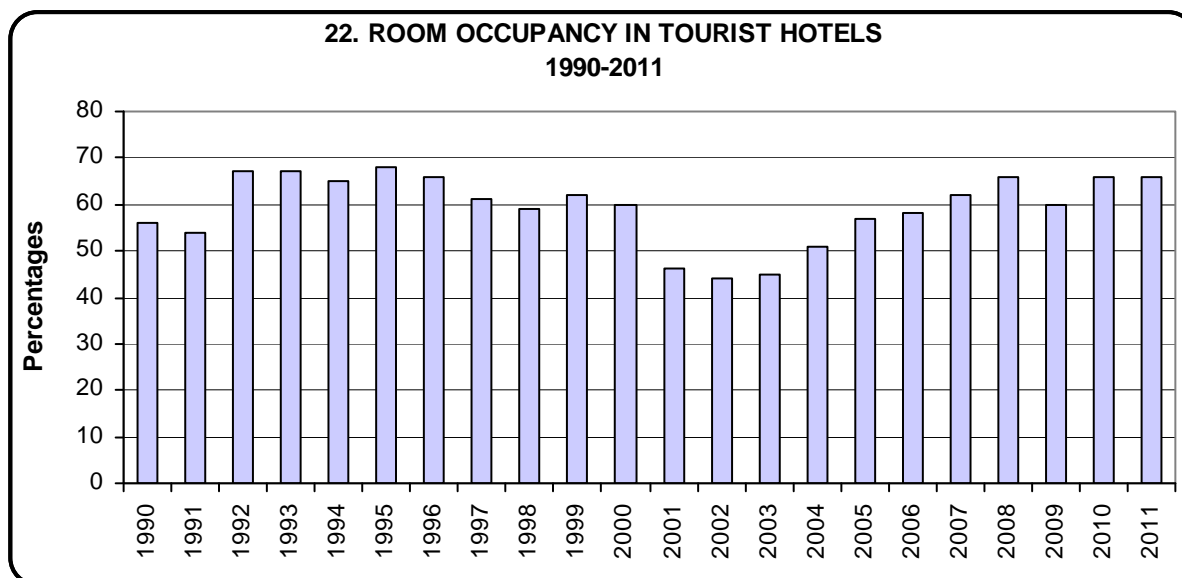

Until 1996, Jerusalem had the largest number of rooms. Since 1997, the largest number of rooms is in Elat.

¹ Hotels registered at the Ministry of Tourism.

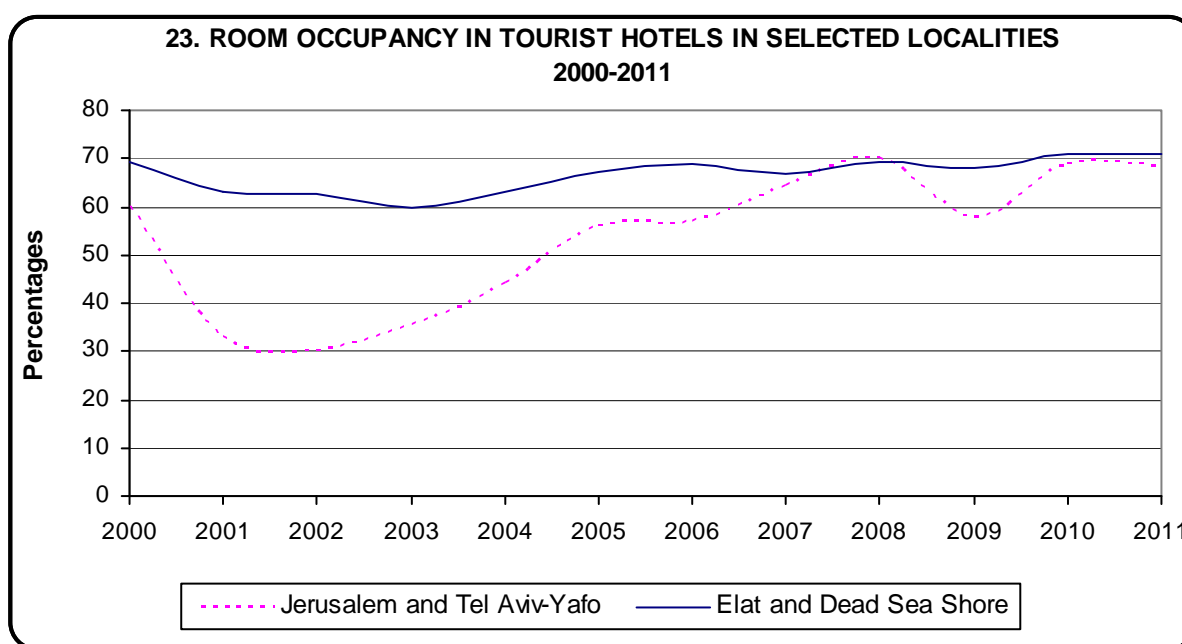

² Including rooms temporarily closed (7% of all rooms on the average in 2000-2011).

ROOM OCCUPANCY

Between 1997 and 2000, the average annual rate of room occupancy in hotels was 61%. In 2001-2003, the average annual rate of room occupancy reached a low point of 45%. After 2003, average annual rates increased each year, reaching a peak of 66% in 2008 – the highest rate since 1996. In 2009, the average rate of room occupancy in tourist hotels declined to 60%, and rose again to 66% in 2010. The rate remained stable at 66% in 2011.

In cities such as Tel Aviv-Yafo and Jerusalem, where tourism is mainly from foreign countries, there were fluctuations in room occupancy between 2000 and 2011 due to changes in the security situation in Israel on the one hand, and changes in the global economy on the other. By contrast, in localities such as Eilat and the Dead Sea Shore, where most of the tourism is domestic, occupancy remained stable.

REVENUE¹ AND EMPLOYMENT

In 2011, the revenue of tourist hotels amounted to NIS 8.8 billion – 1.5% less than the revenue in 2010 in real terms, which was a peak year for tourist hotels.

Revenue from tourists in 2011 was NIS 3.8 billion – 3.4% lower than the revenue in 2010 in real terms.

Revenue from Israelis² in 2011 was NIS 5 billion – similar to the revenue in 2010.

In 2011, revenue from tourists amounted to 43% of the total revenue. In 2000, the share of revenue from tourists was 45%, and during the slump years (2001-2004), it amounted to 26% on the average. In 2005-2006, the share of revenue from tourists was 36%; in 2007 – 40%; in 2008 – 44%; in 2009 – 41%; and in 2010 – 44%.

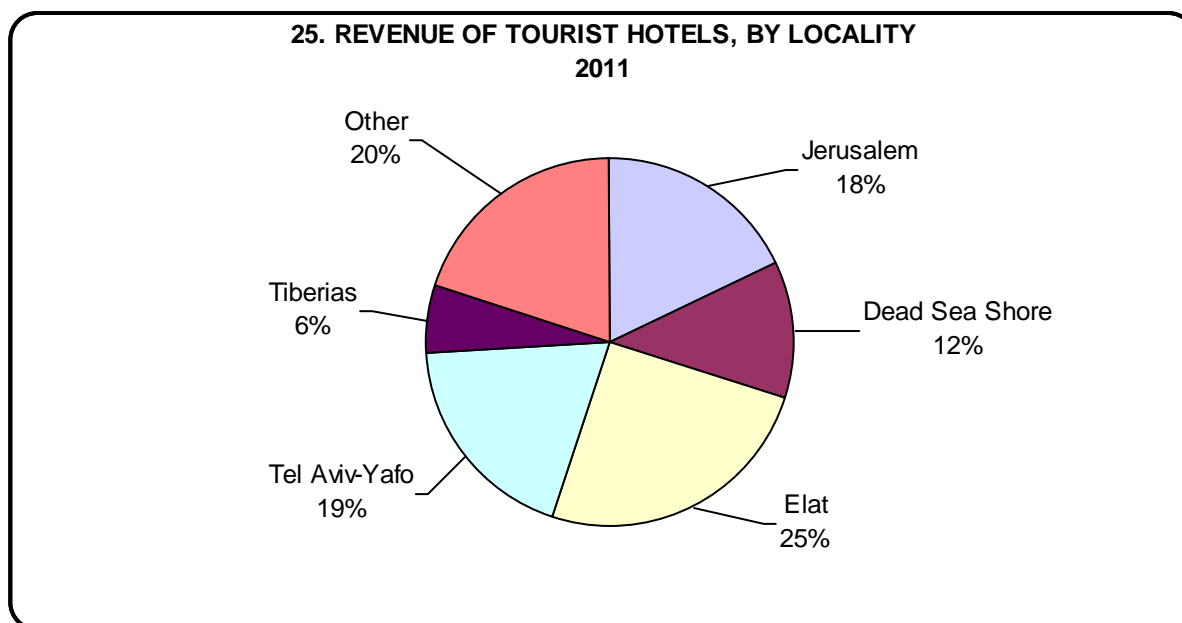

Revenue per tourist-night was \$109.

The annual revenue per room was \$52,000.

About 37% of the revenue derived from hotels in Eilat and the Dead Sea Shore, and about 37% of the revenue derived from hotels in Jerusalem and Tel Aviv-Yafo.

¹ In 2011 prices, adjusted to the CPI.

² Revenue from Israelis also includes revenue from services, such as events and conferences.

In 2011, revenue from rural tourism amounted to about NIS 535 million, compared with NIS 513 million in 2010.

The average price per person-night in rural tourism was NIS 229. In kibbutzim and collective moshavim, it was NIS 218, and in private rural accommodations it was NIS 244.

In 2011, about 28,500 persons were employed in tourist hotels, and an additional 5,500 workers were hired by employment agencies.

The average monthly wage per hotel employee was NIS 6,500, whereas the average monthly wage per worker employed by an employment agency was NIS 4,700.

INCOME, EXPENDITURE AND PROFIT¹

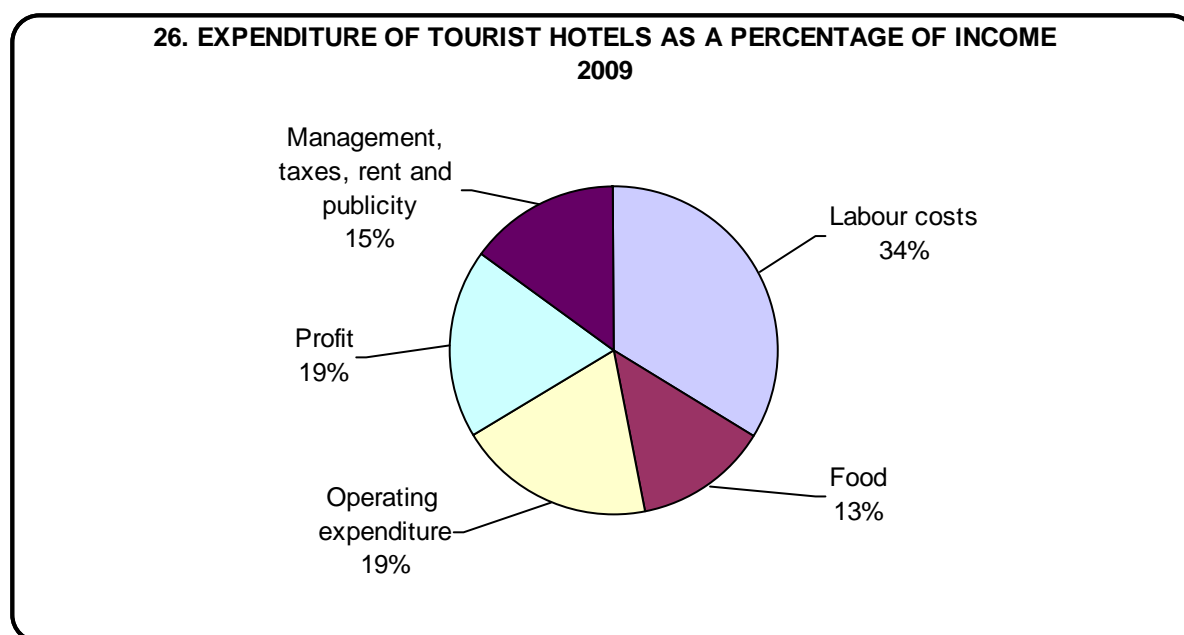

In 2011, the profit² of tourist hotels (surplus of income over expenditure) amounted to NIS 1.5 billion – 18.5% of their income.

The income of tourist hotels derived from rental of rooms (about 50%), food services for hotel guests and for outside clients (about 40%), and other sources such as operation of stores and clubs, and organization of events and conferences (about 10%).

Expenditures consisted of labour costs (40%-45%), purchase of food (12%-16%), and other components such as maintenance, management, taxes, rent, and publicity.

Expenditures for food purchases comprised about 35% of the hotels' income from food (ranging from about 30% in deluxe hotels to about 50% in economy hotels).

Expenditure on taxes, fees and insurance comprised about 6% of the total income (regardless of level of hotel). Approximately 3% was spent on publicity and sales promotion, approximately 1.5% on culture and entertainment, and approximately 1.5% on management (from 0.8% in economy hotels to 1.7% in deluxe hotels).

From 1991 to 2000 there was a steady increase in the revenue of hotels, accompanied by a concomitant increase in expenditures. During that period, hotel profits ranged from 10% to 19% of their income.

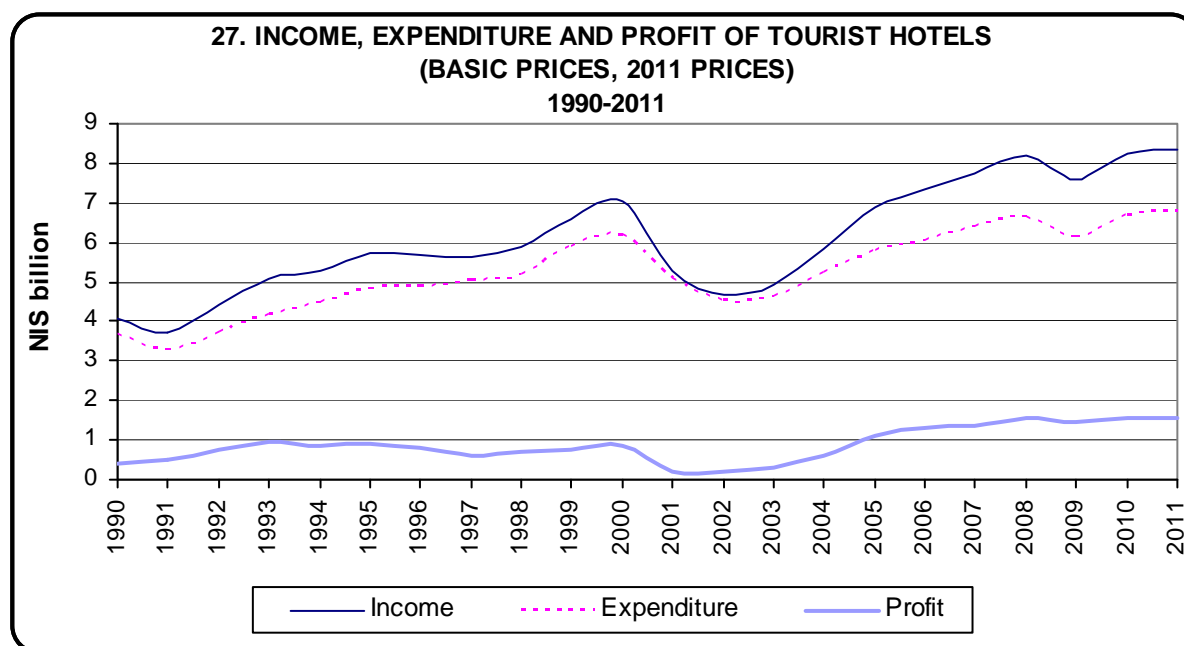

During periods of crisis in tourism, the income of hotels declines more rapidly than their expenditures. When a crisis begins, reservations are cancelled immediately, whereas it takes some time to reduce expenditures, particularly labour costs. In the 2001 crisis, the income of hotels dropped by 25% whereas their expenditures dropped by only 18%.

¹ The last survey was conducted in 2009. For 2010-2011, estimates were calculated.

² In 2011 prices, adjusted to the CPI.

In 2002, income and expenditures each dropped by 11%. The percentage of profit out of total revenue dropped from 12% in 2000 to nearly 4% in 2002. Between 2003 and 2008, income and expenditures increased, although income increased more rapidly – a trend which is indicative of recovery.

In 2009, due to the tense security situation¹, there was a decline in income and expenditures (income decreased by 5%, and expenditures decreased by 2%). In 2010 there was a recovery, and in 2011 income and expenditures were 2% higher than in 2008. In 2010 and 2011, profit comprised more than 18% of the income.

¹ Operation "Cast Lead" took place in January 2009, and affected incoming tourism during the first half of 2009.

THE ECONOMIC CONTRIBUTION OF TOURISM¹

The tourism industry is based mainly on accommodation services (28% of the tourism output), and on air transport services (29%). Additional industries that contribute to tourism output include travel agencies (9% of the tourism output), restaurants (7%), and leisure and vacation services (3%), etc.

In 2011, the tourism consumption of the Israeli economy (of tourists from abroad, of Israelis for travel abroad², and of Israelis in Israel) was estimated at NIS 35.2 billion – a decline of 2% compared with 2010.

The expenditure of tourists from abroad in Israel (including air fare on Israeli airlines) was estimated at NIS 16.2 billion – 46% of the total tourism consumption, and close to 17% of the total exports of services of Israel. Compared to 2010, the expenditure of tourists from abroad in Israel declined by 5%, even though the number of tourists remained unchanged.

The expenditure of Israelis for trips in Israel and abroad was estimated at approximately NIS 19 billion – 54% of the total tourism expenditure, and a 1% increase compared with 2010.

Table C.- Economic Estimates of Tourism*, 2006-2011

At current prices, unless otherwise stated

	2006	2007	2008	2009	2010	2011	% change 2011/ 2010*
Tourism consumption NIS billion							
Tourism consumption - total	26.3	28.1	30.8	30.1	34.6	35.2	-2
Incoming tourism consumption	11.0	11.8	14.4	13.2	16.5	16.2	-5
Israeli tourism consumption	15.3	16.4	16.4	16.9	18.0	19.0	1
Value added from tourism NIS billion							
Value added - total	12.1	13.0	14.4	14.0	16.2	16.4	-2
Value added as % of GDP	2.1	2.1	2.2	2.0	2.3	2.1	
Employed persons (thousands)	90	91	95	95	99	103	4

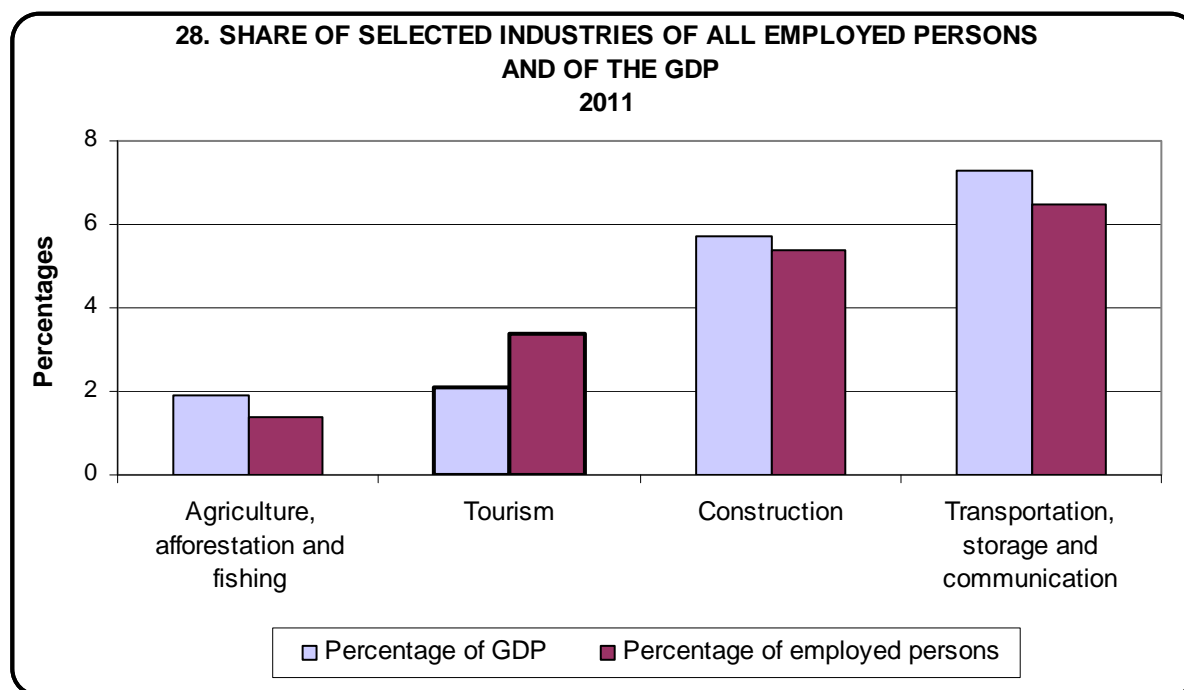

* At 2011 prices constant.

¹ Tourism is not defined as an industry in the definitions of national accounts and in the classification of industries. However, a methodology is used in tourism statistics (the Tourism Satellite Account – TSA), which calculates the share of tourism in various industries of the economy and by this means the product of tourism (i.e., the value added of tourism). The data obtained are thus comparable to the national accounts data.

² Expenditure on services purchased in Israel for the purpose of travel abroad.

On the basis of tourism consumption, economic estimates were calculated, such as tourism output (revenue), the tourism product (value added of tourism), and the number of persons employed in tourism. Thus, in 2011, the value added of tourism was estimated at NIS 16 billion (2% of the GDP), and the number of persons employed in tourism was estimated at 103,000 (approximately 3% of total persons employed in the economy).

The following diagram illustrates the relative share of tourism and selected industries in the GDP and in employment.

In 2011, tourism consumption in the Israeli economy comprised 7% of the total private consumption. By comparison, food consumption comprised 19% and communications consumption comprised 4% of the total private consumption.

3. TERMS, DEFINITIONS AND EXPLANATIONS

A. Tourism

Visitors: Tourists and day visitors (including cruise passengers).

Tourists: visitors with a foreign passport, who enter Israel under a tourist visa and leave the country on a date other than the entry date (not the same day).

Does not include immigrants, immigrant citizens, potential immigrants, foreign workers and day visitors.

Day visitors:¹ Visitors who enter and leave Israel on the same date (the same day). Including cruise passengers.

Cruise passengers: Visitors who enter Israel on a cruise, or on foreign navy vessels, who usually come for a day or two and spend nights on board the ship.

Israeli: An Israeli citizen or a permanent resident without Israeli citizenship, who goes abroad on an Israeli passport for any purpose. Israeli citizens residing abroad who pass the borders with an Israeli passport are also included. The data do not include movements of Arabs from Judea and Samaria and the Gaza Area.

Country of destination: The country in which Israelis plan to spend most of their stay abroad.

Purpose of travel: The main purpose of the Israeli resident's departure abroad – touring, business, emigration, studies, a visit, or any other purpose.

Length of stay: The amount of days spent by a tourist in Israel or by an Israeli resident who travels abroad.

Israelis: Every entry of an Israeli into the country is linked with that person's departure date – mainly on the basis of the person's identity number.

Visitors: Every departure of a foreign visitor from Israel is linked with that person's arrival date – mainly on the basis of the person's passport number.

Until 1999 (inclusive) and as of 2002, a tourist's length of stay in Israel has been calculated by linking that person's entry and departure data, mainly on the basis of the serial number on the form which is filled out by the tourist and entered at the Ministry of the Interior (see the section "Sources of the Data").

In 2000 and 2001, no tourist forms were entered. For most of that period, tourist movement files received by the Central Bureau of Statistics did not include passport numbers, which would have made it possible to establish the link. Therefore, in order to calculate the data on length of stay in Israel, the CBS developed an algorithm for linking records, which is mainly based on similarities in the tourist's name (first and family) and on the tourist's date of birth.

It should be mentioned that the file used to calculate the number of days that tourists stayed in Israel in 2002 referred to tourist arrivals from November 2001 to the end of December 2002. Therefore, data relating to tourists who stayed in Israel for over a month are biased

¹ In 2007, due to the relaxation of criteria for provision of short-term visas to organized groups, there are day visitors who are not necessarily cruise passengers.

downwards, because they do not include tourists who entered the country before November 2001 and departed during the course of 2002.

B. Aviation

Passengers: The data exclude movements of air crew and passengers in transit.

Regular flights: A series of flights fulfilling at least the following conditions: they are flown on a passenger aircraft and are available for sale to the general public; they are planned and adjusted to traffic needs, and they operate according to existing aviation agreements, as well as according to an operators' licence and a fixed timetable which is available to the general public.

The distribution by countries is based on the nationality of the airline.

Charter flight: A flight for which an operator or organizer charters the flight capacity of a plane from an airline. The charter may be for a specific flight or a series of flights.

C. Tourism – Income and Expenditures in Foreign Currency

Income from tourists in Israel: The expenditure in Israel by tourists on goods and services.

Not included: Income of Israeli shipping companies and airlines from fares on international routes, and expenditures of diplomats in Israel.

Expenditure of Israelis travelling abroad: Includes expenditure of Israeli residents travelling abroad as tourists, on business, as students, for medical reasons, etc.; excludes the cost of travel fare.

The data do not include travel allowances spent abroad by government employees travelling on business (these are regarded as government expenses).

Income of Israeli companies from travel fares on international lines: Income of Israeli shipping and aviation companies from transporting foreign passengers (travelling to Israel or travelling between foreign ports).

D. Hotels,¹ Youth Hostels, Rural Tourism at Kibbutzim and Collective Moshavim, and Field Schools

1. Tourist hotels

Tourist Hotels (registered)

This definition includes hotels, guest houses, holiday villages, apartment hotels, and mini-suite hotels that are recommended for tourists by the Ministry of Tourism.

Tourist hotels in kibbutzim and moshavim: Includes only tourist hotels that are listed as such. This category does not include other accommodations in kibbutzim and moshavim that are defined as “rural tourism” (see definition below). Data on these hotels are included in all tables that present data on tourist hotels.

2. Other hotels

This population includes hotels and other types of accommodations not included in Section 1 above, which are not defined as “youth hostels affiliated with the Youth Hostels Association”, “Christian hostels”, “rural tourism in kibbutzim and collective moshavim”, or “field schools with hostels” (see definitions for these categories below, at the end of Section D). In addition, the data do not include other rural tourism populations (that are not in kibbutzim and collective moshavim), which have not been surveyed as yet by the Central Bureau of Statistics.

The data for this population are obtained by means of a sample. In 1997, a new sample was drawn (see the section “Sources of the Data”).

Grading and Classification of Hotels²

Discontinuation of grading: Following a regulation issued by the Minister of Tourism, hotel grading was discontinued in the middle of May 1992. As of that date, it is prohibited to publish statistical data according to the previous grading. Consequently, since June 1992, data are published only by locality.

Classification of hotels by levels: Following the above-mentioned regulation, it was necessary to establish an alternative classification of hotels that would allow for improved analysis of the data. Several alternatives were considered (e.g., classification by the number of rooms in the hotel or by the number of employed persons per room). It was decided to divide the hotels that had been graded from 1 star to 5DL into four levels, based on two characteristics: the character of the hotel (recreational/urban); and the average size of a double room (excluding suites and public areas).

¹ The total number of hotels and other accommodations includes those that were temporarily closed due to renovations or due to temporary lack of operational profitability (as was the case following the security incidents at the end of September 2000). Hotels and other accommodations that changed their designation (i.e., that were converted into hostels for immigrants, office buildings, etc.) and those that were closed permanently have been deducted from that total.

² An extensive explanation on grading of hotels by stars and the transition from the old grading to the new grading system appears in: The Central Bureau of Statistics (1991). *Tourism 1989-1990*. Publication no. 901. Jerusalem: Author.

Data on the character of the hotel (recreational/urban) and size of the rooms in the hotels were obtained from the file of data collected previously by the Ministry of Tourism for the purpose of re-classifying the hotels in 1989. For hotels that were not examined at that time and for hotels that opened at a later date, the character and size of the hotel were determined on the basis of the hotel's building permit, as it appears in the Ministry of Tourism's database. For definitions of the four levels that were established, see table D below.

A table presenting the change in classification of hotels and rooms by grade to the new categories established in December 1991 appears in previous publications. Data relating to the period from January 1991 to May 1992 were re-processed, according to the new levels.

Table D.- Defining Hotel Levels, by the Average Area of a Double Room, and by the Character of Hotel

	Average Area of Double Room (sq.m.)			
	Level I	Level II	Level III	Level IV
Recreational (a)	Over 28	23.5 - 28.0	20.5 - 23.4	Up to 20.4
Urban (b)	Over 26	21.5 - 26.0	16.7 - 21.4	Up to 16.6

(a) Recreational hotel: A hotel situated at a recreation site or in a city, where guests stay for the purpose of recreation, and where it is assumed that they spend most of their time – day and evening – at the hotel and its facilities.

(b) Urban hotel: A hotel situated in a city or in an urban centre of a recreation site, where guests stay mainly to sleep, and where it is assumed that they spend most of their time – day and evening - outside the hotel.

Source of the data: "Minimum Requirements for Planning Hotels", Economics and Planning Division, Ministry of Tourism.

Rooms: Rooms containing at least one bed intended for guests. The following are not included: offices (of the hotel or rented out), dining rooms, halls, store rooms, apartments not available for renting out, etc. A suite is counted as one room.

The number of rooms includes rooms in hotels that were temporarily closed (due to renovations or seasonal factors), as well as rooms in hotels that were temporarily closed due to low profitability resulting from the security situation as of October 2000. Not included are rooms in hotels that were transformed into immigrant absorption centres.

Beds: The permanent beds in the above rooms in the hotels. Double beds are counted as two beds. Cribs and temporary beds for children are excluded.

Guest: A person, including a child, who checks into a hotel and spends at least one night there (including persons exempt from payment). A guest who left the hotel and checked into it again within the same period (even within the same month) is counted as two guests.

Tourist: A guest who registers at the hotel with a foreign passport, (including foreign workers and diplomats).

Israeli guest: A guest checking in a hotel with an Israeli identity card, including new immigrants and potential immigrants.

Person-nights: All of the person-nights at hotels during the period of the report, with the exception of person-nights in owned apartments that are not rented out. Including person-nights spent by new immigrants in hotels rented by the Jewish Agency for a period of less than one year. One night spent by a single guest in a room with two beds or a double bed, or in a complete apartment is counted as one person-night.

Potential person-nights: The number of beds (as defined above) multiplied by the number of nights the hotel was open during the period of the report.

Percentage of bed occupancy: The total number of actual person-nights, expressed as a percentage of the total number of potential person-nights spent in the hotels during the period of the report.

Potential rooms: The number of rooms (as defined above), multiplied by the number of nights the hotel was open during the period of the report.

Percentage of room occupancy: The total number of rooms occupied, expressed as a percentage of the total number of potential rooms available at hotels during the period of the report.

Jobs, Wages and Revenue

Tourist hotels

The data are based on a sample that was drawn in 1989. All hotels graded 5 star deluxe, 5 star and 4 star, and other hotels with 100 or more rooms were definitely included. The rest of the hotels were selected for the sample on a probability basis, according to each hotel's grade and number of rooms. Inflation of the sample for the overall population was based on the hotel's grade.

Due to the discontinuation of hotel grading and the transition to inflating the sample data for the entire population based on the hotel level, there were slight changes (up to $\pm 1\%$), in the data obtained at the national level. At the level of localities, the differences were greater in some cases.

Other hotels

In 1997, revenue and employment data for other hotels were investigated for the first time. The data are based on the new sample of these hotels (see explanations in Section D2 above).

Jobs (*formerly: Employed persons*): Employees and proprietors, and family members of the proprietors who work at the hotel without pay (in hotels in kibbutzim, this also includes jobs held by members of kibbutzim and volunteers working without pay, classified as proprietors and family members). Workers employed by employment agencies are excluded.

Employee jobs (*formerly: Employees*): Persons who worked in a hotel for at least one day during the month and received wages, including part-time employees as well as proprietors and shareholders who receive a wage or salary from the hotel.

Wages: The sums appearing on the payrolls for the reported month, and on which income tax is due, including: basic wage, overtime, various taxable allowances such as: cost of living allowance, seniority, education allowance, fares, convalescence allowance, car allowance (excluding insurance and licence), telephone allowance, clothing, 13th month salary, premiums, and bonuses, as well as taxable payments in kind (such as housing).

Until the wage reform in the hotel industry, wages included service charges collected by the business (whether they were paid by the employer, or whether they were transferred for direct distribution to workers from a collective fund). Wages do not include non-taxable payments to the employee such as per diem allowance, the value of meals (which are not taxable), severance pay, pension, and service charges that are not covered by the employer or not transferred for direct distribution from a collective fund, as well as other labour costs paid by the employer (social expenses).

Kibbutz members and volunteers working at hotels on kibbutzim and moshavim are defined as proprietors and family members, as mentioned. Therefore, wages are not imputed for them.

Revenue: Gross revenue (including Value Added Tax)¹ from person-nights and from renting rooms for a long period. Also includes revenue from other services that are not person-nights, such as: organizing parties and renting halls, rental of day rooms (without spending the night), deposits for cancelled rooms, meals, drinks, bars, rental of shops, night clubs, swimming pools, laundry, rights to run businesses in the hotel, etc. It also includes payments received from the workers (for meals, housing, etc.). Incentives are not included.²

Revenue does not include hotel receipts for compensations from insurance on the various currency rates since 1981. This compensation was discontinued in July 1993.³

The monthly revenue in NIS and other currencies is converted into US dollars at the average representative exchange rate for the month, based on the daily rates published by the Bank of Israel.

Revenue from tourists: Revenue from accommodation and other services for "tourists" who do not pay VAT (excluding revenue from a "tourist" not staying at the hotel, who pay VAT for other services at the hotel).

Revenue from Israelis: The difference between total revenue and revenue from tourists, as defined above. Revenue from Israelis includes revenue from accommodations and services for Israeli guests, revenue from events and rental of areas as well as revenue from tourists for which VAT is payable.

Average revenue per person-night, per room, and per job: Calculated by dividing all hotel revenue, as defined above, by the total number of actual person-nights spent in hotels during that year, or by the average number of rooms (not including rooms in hotels that were temporarily closed due to the security situation that began in late September 2000) or by the average number of jobs available per month for that year.

It should be clarified that the data derived for person-nights and rooms are based on the sample population. These amounts may differ slightly from the data obtained by dividing the total revenue by person-nights/rooms as presented in the publication (census data).

¹ Since November 1985, VAT on revenue from hotels in Elat, which became a Free Trade Zone, has been rescinded. The distinction between revenue from tourists and from Israelis is based on the definition "revenue from tourists is exempt from VAT and revenue from Israelis is due VAT at a zero rate".

² The hotels received compensation from insuring the various currency rates since 1981. On 25 July 1993, this compensation was discontinued. A table showing the range of annual receipts appears in the publication *Tourism and Hotel Services Statistics Quarterly* 1, 1995 to *Tourism and Hotel Services Statistics Quarterly* 2, 1998.

³ A table presenting hotel receipts from insurance of currency rates was published in the introduction to the *Tourism* publications from 1993 to 1996.

Youth hostels

Youth hostels affiliated with the Youth Hostel Association.

Rural Tourism

Rural Tourism includes private rural tourism, and rural tourism in kibbutzim and collective moshavim.

Private rural tourism: This market segment was investigated since the beginning of 2005. The population includes all accommodations in rural villages except those in kibbutzim and collective moshavim.

Rural tourism in kibbutzim and collective moshavim: This market segment has been investigated since April 1996. The population includes all other accommodations located on kibbutzim and collective moshavim that were not investigated within the framework of the other series. The population includes single accommodation units (rooms, apartments), hostels, camping grounds, "seminar centers," etc. and does not include hotels listed as tourist hotels, youth hostels affiliated with the Youth Hostel Association, and field schools located at kibbutzim (see above).

Field schools: Field schools affiliated with the "Society for the Protection of Nature in Israel" run a number of programs: guided tours for hikers, activities with the residents of the surrounding area, research on the region, and activities for preserving nature and the environment. Field schools also operate hostels.

E. The "Hotels - Income, Expenditure and Product" Survey

The complete results of the survey appear in this publication, as of the publication *Tourism 2006*.

The survey population: The population includes tourist hotels (in kibbutzim and moshavim as well) as defined above - excluding hotels in East Jerusalem.

Survey sample: The sample of hotels used for this survey is the new sample that was presented in 1989 for collecting data for the monthly series on revenue, employee jobs and wages (as mentioned, excluding hotels in East Jerusalem). The survey is updated regularly.

Financial data: These data are presented in NIS at factor cost (excluding VAT, including receipts from exchange rate insurance).¹

Every few years the base period of prices is changed, according to the **Consumer Price Index**:

Until the 1989 survey (inclusive) – data were presented at June, 1987 prices;

The 1990-1995 surveys were presented at average 1990 prices;

The 1996-1999 surveys were presented at average 1995 prices;

As of the survey for 2000, data are presented at average 2000 prices.

Data for previous years appearing in the Introduction were converted to average 2009 prices by multiplying the ratio of the two bases:

$$\frac{\text{Average 2009 Index}}{\text{Average 2000 Index}} = 1.2036$$

Each figure from previous years presented at average 2000 prices may be multiplied by this coefficient in order to convert it to average 2009 prices.

Adjustment of fiscal data to uniform average 2009 prices: Despite the decrease in the inflation rate, adjustment of the data to uniform prices continues, as has been done since the survey began in 1981.

Subjects of investigation: The data provided in the Profit and Loss Statements submitted by the hotels to the income tax authorities are presented at factor cost (including subsidies and grants, excluding VAT).

Profit and loss statement: An accounting report that includes data on ongoing activities of the hotel during the survey year. The report includes income and expenditure data for the survey year which derive from sales of guest services and other hotel services, as well as from activities not directly related to the hotel's operation.

Operating income: Includes income related directly to hotel operations during the survey year, such as: from room rentals, food and beverage services (including dining rooms,

¹ In August 1993, exchange rate insurance for hotels was discontinued. Data on amounts paid to hotels in this framework appear in the publications *Tourism*, from 1993 to 1996.

restaurants, night clubs, bars, parties, events, etc.) and from other services provided to guests (e.g., communications, laundry, use of swimming pools, saunas, health clubs, organized tours, etc.), as well as income not directly related to guest accommodation, such as: rental of shops, halls, and parking; operation of shops, catering services or operation of a restaurant outside the hotel, etc. Income from exchange rate insurance paid to hotels until July 1993 is also included.

Non-operating income: Income in the survey year that is not directly related to hotel operations for that year, such as: profit from the sale of property, receipts on account of previous years, profit from sale of negotiable securities, etc.

Purchased expenditure – hotel operation: All expenditures on purchase of goods and services used for operating the hotel, such as: food, linen, kitchenware, staff uniforms, fuel, electricity, water, maintenance and repairs, communications services, advertisement, transport, laundry services, etc.

Purchased expenditure – management and general: All expenditures on goods and services used for managing the hotel, such as: auditing and other professional services (computers, legal services, etc.), municipal taxes, fees and insurance, office supplies, doubtful and bad debts, travel expenses, donations, work-related studies, etc. Because there is no distinction between the costs of communication services to guests and those for hotel management in most balance sheets, all communication costs were listed under "hotel operation expenditure". For hotels that pay management fees to another company, the management fees were included in this item.

Labour cost: Wages and other labour expenses of all hotel employees (services, management and clerks, including kibbutz members), including accommodation for employees, meals, service charges, etc.

Labour costs presented in hotel profit and loss statements are net costs to hotels, after the deduction of two components:

- a) Benefits given to employers in Elat by the tax authorities, under the "Free Trade Region Law - 1985".
- b) Reductions in payments to the National Insurance Institute for hiring employees, given to hotels in Israel from time to time, according to government resolutions.

The presentation of labour costs in profit and loss statements due to the above reasons is accomplished reducing the value of labour costs rather than by crediting income.

In addition, some of the reports include labour costs in the item "sales and marketing expenditure", and there is no possibility of separating those items.

Profit and return on capital (before tax payment): Appears on the profit and loss statements of the hotels as the difference between the hotels' total income and total expenditure, except for depreciation and financing costs (net), i.e., it is the profit before deduction of depreciation and financing costs (net).

Gross domestic product: The gross domestic product includes labour costs and profit of the hotels (until 2008, it also included the cost of renting buildings).

Data at factor costs: Excluding VAT, including subsidies.

Imputations for hotels that did not provide data: Balance sheets could not be found for several of the hotels in the sample, imputations were conducted. The income of these hotels amounted to approximately 11% of total income in 2009.

The imputation was based on income and wages reported by the hotels themselves in the monthly series. The ratio of the total income in the profit and loss statement to the income reported in the monthly series was calculated on the basis of the data received from hotels for that provided profit and loss statements. In addition, the ratio of labour cost to wages from the two sources was calculated. These ratios were used to impute total income and labour costs in this survey. The rest of the income and expenditure items were imputed on the basis of the ratios between the various items, which were obtained from the detailed reports. The imputation was carried out according to levels of cells within localities.

Limitations of the data: As mentioned, the data in this publication were based on the audited reports submitted by the hotels to the income tax authorities, which were prepared according to accepted accounting procedures. The income and expenditure items, however, are not necessarily presented in a uniform manner. Thus, for instance, the considerations for distinguishing between income from rooms and income from food are not consistent. As for income, in some cases it was reported in the profit and loss statement as net, after deduction of commissions. In other cases, however, income was reported as gross income (incl. service charges and/or before deduction of commissions). In those cases, commissions were also included in expenditures, and service charges were included in expenditure for labour cost. Therefore this limitation does not affect the profit data.

In addition, management fees paid by the hotels were treated in the survey as expenditure, and were therefore not included in the profit.

As mentioned, the survey was based on a sample of hotels. As in any sample-based survey, the results may be somewhat biased due to sampling errors.

Several hotels in the sample that did not provide balance sheets. Therefore, imputations were conducted for those hotels, and the imputed data may differ to some extent from the actual data. In addition, some of the reports did not include sufficient details about the income and expenditure items. Imputation of these items was based on detailed reports received, according to the level of the hotel.

Data on income in the balance sheet were compared with the monthly data submitted to the CBS for the same report period after adjusting the monthly data to factor prices (deducting VAT and adding receipts for exchange rate insurance) and to uniform prices based on the average for 2007. The comparison revealed that during all of the survey years, the balance sheet data were higher than the data obtained from the monthly series, by 1%-5% at the national total level (see Table E in this paragraph). In a classification by levels or localities (as well as kibbutzim and moshavim), the difference is likely to be greater.

There are several limitations that must be taken into account when comparing the data of this survey with the ongoing monthly data:

In the monthly series, income is defined in the monthly series (including taxes, excluding subsidies), whereas income in this survey is defined at factor cost (including subsidies, excluding taxes).

In the monthly series, kibbutz members and volunteers employed at kibbutz hotels are defined as owners. Hence, their wages are not included under labour costs. In the profit and loss statements of the balance sheets, however, labour costs include imputation of kibbutz members' work.

Table E. - Income of Hotels
A Comparison of Balance Sheet Data with Monthly Series Data

At factor cost – average 2009

	Balance sheet data		Monthly series data		Balance sheet data Monthly series data

2009	7,126.8	-2.3	7,160.3	-0.4	0.995

Preliminary estimates of income, expenditure, and profit: Preliminary estimates of the main variables – income, expenditure and profit – are based on the current series on accommodation as well as on the "Hotels - Income, Expenditure and Product" survey for the two years following the year of the survey. A 31-year database (1981-2011) was constructed, which includes data from the current series.

Data adjustments: Adjustments were made in the data from the current series that were used in the estimate. Data on East Jerusalem were deducted, and data on revenue were adjusted to the average factor costs for 2009. Furthermore, with regard to annual data on availability of rooms from December 2000 to December 2007, rooms that were closed due to the tourism crisis were deducted.

Method of estimation: The estimates of total hotel income and expenditure were constructed on the basis of a linear regression model. The quality of the regression was examined on the basis of the R^2 index, which was close to 1 for both variables. The profit variable was calculated as the difference between estimated income and estimated expenditure. The model was based on four explanatory variables, and the criterion for preference of variables was a larger R^2 .

Limitations of the estimates: All data were computed on the basis of nationwide figures (excluding East Jerusalem). It is possible that if the calculations had been based on different cross-sections (hotel Levels, localities), different results might have been obtained.

Estimates for 2010, 2011:

The survey data, including estimates for the two years following the last survey, are presented in the table below.

Table F.- Profit, Expenditure and Income (1) of Hotels

At factor costs of 2009 average, NIS million			
Year	Profit (1)	Expenditures	Income
Actual data			
2000	789	5,809	6,599
2001	172	4,794	4,967
2002	176	4,243	4,419
2003	278	4,341	4,619
2004	547	4,941	5,488
2005	1,055	5,424	6,479
2006	1,223	5,663	6,885
2007	1,269	6,027	7,296
2008	1,462	6,231	7,693
2009	1,376	5,751	7,127
Estimates			
2010	1,485	6,288	7,772
2011	1,445	6,386	7,831

(1) Before deducting depreciation and net financing costs.

F. Miscellaneous

Governmental grants and investments in tourism: Grants and investments in hotels and other tourism enterprises approved by the Tourism Development Corporation.

International Conferences and Exhibitions

Number of conferences: International conferences and the like, which take place in Israel and are reported on by the organizers to the Department of International Conventions of the Ministry of Tourism.

Overseas participants: Not including persons from abroad who accompany participants and Israelis.

Sites of the Israel Nature and Parks Authority

Visits: All visits to sites that are open to the public for an entrance fee (payable by personal card, combined local card, senior citizens card, etc.) or to sites that are open free of charge.

Income: All income from entrance fees, guided tours, cable car rides at Massada, and information stations (Bet She'an, Ovdar, Zippori), and from sale of souvenirs.

Recognized Museums

Museums that were recognized by the Ministry of Culture and Sport (see Section 4, "Sources of the Data").

Two recognized museums were not included: Yad VaShem (which operates under the Yad VaShem Law and not under the Museums Law), and the Dagon Museum (which did not request funding and did not receive a budget from the Division of Museums even though it is a recognized museum).

G. Seasonal Adjustment and Calculation of Trends¹

The seasonal adjustment method is based on the use of moving averages to estimate seasonal factors, for each month. The seasonally adjusted series is calculated by using the X-12-ARIMA² Seasonal Adjustment Method and by a procedure developed in the Central Bureau of Statistics for simultaneous estimation of factors for prior adjustment of festivals (Passover, Easter, and the Jewish New Year) and trading day effects in Israel.³

Prior adjustment of the effects of festivals and trading days is implemented for most series on a monthly basis before seasonal adjustment.

The seasonally adjusted series is calculated by dividing the original series both by the seasonal factors and by the prior adjustment factors when available. The seasonally adjusted series is the first estimate of the trend and includes irregular fluctuations. As of April 1992, the concurrent seasonal adjustment method is applied, i.e., the seasonally adjusted series is calculated each month, on the basis of the most updated original data.

In the series **"tourist arrivals by air"**, seasonal adjustment is applied to the aggregate series as well as to 12 main sub-series separately (**arrivals by country of residence**). In the series **"person-nights at tourist hotels"**, the aggregate data (total and by localities) are calculated by summing up the seasonally adjusted data of the two sub-series (person-nights of tourists and person-nights of Israelis).

The trend is estimated by an improved method, which is based on Henderson's method and on an additional process.³

A trend break in the series: [From October 2000 (due to the security situation in Israel), and FROM July 2006 (with the outbreak of the Second Lebanon War), irregular original data were obtained on incoming tourism (total and by country) and on tourist person-nights in tourist hotels (total and by locality). Mainly, sudden and ongoing changes were identified in the level of original data, i.e., in terms of trend breaks in the series. Therefore, trends and seasonally adjusted series for October 2000 and FOR July 2006, were estimated after adjusting the series data prior to September 2000 to June 2006 to the low levels obtained in the first months of the above-mentioned crises.

¹ The Statistical Analysis Sector of the Central Bureau of Statistics provided consultation and was responsible for the processes of estimating the seasonally adjusted series and the trends and dealing with trend breaks.

² U.S. Census Bureau - The X-12-ARIMA Seasonal Adjustment Method.

³ A detailed explanation of the method of seasonal adjustment and calculation of trends was published in the *Seasonal and Prior Adjustment Factors for 2012, Trends for 2008-2012* (only on the CBS website: Definitions, Classifications, and Statistical Methods Seasonal Series). Available at: <http://www.cbs.gov.il/publications/tseries/seasonal10/Presentatione12.presentationh12.pdf>

4. SOURCES OF THE DATA

Arriving/Departing Tourists (Tables 1-11)

As of 2006, data are obtained from a new computerized system called "Rotem, which is used at border check points.

Until the end of 1999, every tourist filled in an entry registration form (AL/17) at the border check point upon entering Israel. A copy of this form was collected upon the tourist's departure from Israel. Data appearing on these forms included country of residence, date of birth, border check point, etc. The data were entered at the Ministry of the Interior, and a copy of the records was sent to the Central Bureau of Statistics, where it was processed.

As of January 2000, no files have been received from the Ministry of the Interior on movement of tourists at the borders. Therefore, the data for 2000 and subsequent years are derived from the files of the border police. These files do not contain information on the tourists' country of residence, but list their country of citizenship. However, it is important to note that in most cases the tourists' citizenship coincides with their country of residence. In addition, these files do not contain information on the type of visa held by foreign nationals. Therefore, immigrants and foreign workers were deducted from the number of foreign nationals arriving in the country.

Departing/Arriving Israelis (Tables 12-20)

As of 2006, data are obtained from a new computerized system called "Rotem", which is used at border check points.

Data on the total number of Israeli departures/arrivals and data on age were obtained until March 1993 through a form filled out by every Israeli that departs or enters the country at the border check points. This procedure had been in existence since the establishment of the State of Israel.

In April 1993, this form was discontinued. Since then, Israeli movements at the borders (departures/entries) are recorded by computer and the files are sent daily to the Border Check System of the Ministry of the Interior. Problems in this system led to loss of data, especially in 1994. Therefore, data for 1994 are estimates, based on external sources of the Border Police at the Airports Authority.

Data on the main country of destination and purpose of the trip were obtained for departing Israelis until March 2000 through a sample survey that began in 1994. The survey population included Israelis aged 15 and over who departed Israel via Ben Gurion Airport. The sample covered about 2% of the Israelis who departed in July and August, and about 3% of the Israelis who departed in other months. Sample data for 2000-2002 are unavailable, because the sample surveys were discontinued.

It should be noted that as of July 1998, a new "biometric system" was instituted. Israelis who went through the biometric check point were not included in the survey sample. Consequently, there was a considerable increase in the "unknown" category in relation to the tourists' destinations and the purpose of their trip. In order to overcome this problem, destinations were imputed according to the monthly distribution of the various destinations. In 1999, there was a substantial increase in the number of departures via biometric transportation. Therefore, the percentage of "unknown" cases reached about 10%. Hence,

there was an apparent decline in the number of departures to certain destinations as well as in the number of departures abroad for business purposes. No imputations were carried out in 1999.

Aviation (Tables 21-22)

The data on international air traffic are based on monthly reports obtained from the Israel Airports Authority.¹

Income from Tourism and Expenditure of Israelis Travelling Abroad (Table 23)

The data are estimated by the Central Bureau of Statistics.

Hotels (Tables 24-43)

A. Tourist Hotels

Data on the number of rooms, beds, guests, and person-nights (by guests' continent of residence) and occupancy are obtained from all of the hotels. Some of the data are based on monthly hotel reports obtained from the Israel Hotel Association.

Data on revenue, employment, and wages were received directly from a representative sample of 262 hotels at the end of 2002. Until the end of 1994, the sample included only tourist hotels.

B. Other Hotels

The data published until the *Tourism 1996* publication were based on a sample of accommodations that was drawn in 1975 and partially updated over the years. At the end of 1996, the sample consisted of 25 hotels.

This hotel population is difficult to locate and enumerate. In 1996, the Ministry of Tourism constructed a file of all guest accommodations in Israel within the framework of National Ordinance Plan no. 12. In addition, a census of institutions was conducted by the Central Bureau of Statistics within the framework of the 1995 Population Census. These two files, in addition to the employers file of the National Insurance Institute, made it possible to construct an up-to-date file of all of the guest accommodations defined in this population.

In 1997, a new sample was drawn, which consisted of 50 hotels. Data obtained on the basis of the old sample referred to the number of rooms, beds, person-nights and occupancy. The investigation was expanded in the new sample, and includes data on the revenue of hotels, number of jobs, and wages paid. Data on other hotels are presented in Tables 24, 28, 31, and 39.

Youth Hostels (Tables 44-47)

Consolidated data supplied by the "Youth Hostels Association" are based on reports received from the hostels.

Rural Tourism (Table 48-50)

The data are obtained from all of the kibbutzim and collective moshavim that operate rural tourism units.

¹ For further information, see The Central Bureau of Statistics, *Transport Statistics Quarterly*.

Field Schools (Table 51)

Consolidated data are obtained on a monthly basis from the Society for the Protection of Nature in Israel.

The Survey “Hotels – Income, Expenditure and Product” (Tables 52-76)

The financial data were based on the profit and loss statements (balance sheet) for the survey year, as submitted by hotels to the income tax authorities. Data on person-nights and number of rooms which were used for the calculation of derived data were those provided by the hotels for the monthly series.

Two figures on rooms were calculated for each hotel. To determine the hotel's size group, the number of rooms in December or in the last month of the hotel's activity was used. To calculate annual derived data (income per room, etc.), the average monthly number of rooms per open hotels was calculated (total number of rooms during all months of activity, divided by 12).

Miscellaneous (Tables 77-94)

National Parks and Nature Reserves (Tables 79-81)

Data were obtained from the "Israel Nature and Parks Authority".

Vacations/trips in Israel and Abroad, by Israelis Aged 20+ (Table 82)

The data were obtained from the Social Survey¹ conducted by the Central Bureau of Statistics in 2002. The survey covered all residents of Israel, except residents of East Jerusalem and residents of institutions. The sampling frame was the population register, and the sample consisted of individuals aged 20+, of whom 7,000 responded.

The survey findings contain data on a variety of variables related to the population of Israel, including: education, standard of living, satisfaction with one's living environment (e.g., the physical state of one's dwelling, neighbours, transportation, air pollution, noise, safety, etc.), state of health, religion, employment, job satisfaction, and social relationships.

Recognized Museums (Tables 83-85)

The data were collected from *Museums in Israel – Summary of Yearly Activities in 2009*, published by the Center for Information and Culture Studies established by the Ministry of Culture and Sport (operated by Pilat).

¹ Detailed data from the survey are available on the CBS website, and can be accessed through the Social Survey Table Generator.

Data received from or through the Ministry of Tourism:

- Findings from the survey of tourists at the border checkpoints conducted for the Ministry of Tourism (Table 11)
- Christian hostels – the latest update is for 1996 (Table 47)
- Government grants and investments in tourism industries (Table 86)
- Licenced tour guides (Table 87)
- International conferences and exhibitions (Tables 88-89)
- Graduates of hotel schools (Table 90)
- Shops listed for tourists (Table 91).

International Tourism (Tables 92-94)

The World Tourism Organization (UNWTO).

TABLES

**TABLES ARE PRESENTED IN HEBREW ORDER -
FROM RIGHT TO LEFT**

EXPLANATORY NOTES

Area Covered by the Statistical Data

The statistical data relate to the economic territory of the State of Israel, unless otherwise stated.

A. The economic territory of a country (according to the definition of the OECD-SNA):

The economic territory of a country consists of the geographic territory administered by a government within which persons, goods and capital circulate freely.

The economic territory of the State of Israel: According to this definition, the economic territory of the State of Israel is as indicated in paragraph B below.

B. District and Sub-District:

The districts and sub-districts were defined according to the official administrative division of the State of Israel, which includes 6 districts and 15 sub-districts.

Including Israeli localities in the Judea and Samaria Area.

Special Symbols in the Tables

Blank space = Irrelevant due to the table's structure

- = No cases

.. = Unknown or not for publication

0 = A value smaller than half the unit by which data are presented in the table

* = Provisional data

R = Revised data

Details do not necessarily add up to totals, because of rounding off.

(1) As presented in the Balance of Payments.

See explanation in "Terms, Definitions and Explanations".

(2) The data include estimates of income from tourists
and expenditure of foreign workers in Israel.

(3) Not including the expenditures on international flights.

(4) Also includes international lines between foreign ports.

(1) כפי שמוצג במאזן התשלומים.

ראו הסבר בפרק "מונחים, הגדרות והסברים".

(2) הנתון כולל אומדנים של הכנסות מתיירים
והוצאות של עובדים זרים בארץ.

(3) ללא הוצאות על טיסה בקווים הבין-לאומיים.

(4) כולל בקווים בין-לאומיים בין נמלים זרים.

פרק IV
שירותי הארחה
CHAPTER IV
ACCOMMODATION SERVICES

בתי מלון – סיכום

(1) Incl. hotels temporarily closed.

(2) Calculated according to the division of potential rooms by number of days in the month.

(3) No data available, because in some months less than 3 hotels were open.

(1) כולל בתי מלון סגורים זמנית.

(2) מחושב על סמך חלוקת החדרים האפשריים במספר הימים בחודש.

(3) לא מוצגים נתונים כי בחלק מהחודשים היו פתוחים פחות מ-3 מלונות.

(1) In percentages: adjustments are made for festival dates and trading days.

Detailed explanation on the method used for calculating the factors appears in *Seasonal and Prior Adjustment Factors for 2012. Trends for 2008-2012*

on the CBS website (Definitions, Classifications & Methods, Statistical Methods, Time Series).

(1) באחוזים: מבוצעות התאמות עבור ימי חג וימי פגילות.

הסבר מפורט על שיטת חישוב הגורמים מופיע בפרסום הגורמים העונתיים וגורמי התאמה מראש ל-2012, תגמות ל-2008-2012

באתר הלח"ס באינטרנט (גדרות, סיווגים, שיטות סטטיסטיות, סדרות עתידיות).

Income from tourists (9)				אחוזים Percentages		הכנסות מתיירים (9)
From export of services				13	14	מסך יצוא שירותים
From total exports (goods and services)				6	6	מסך כל היצוא (סחורות ושירותים)

(1) Source: Balance of Payments and Foreign Trade - the CBS.

(2) Total of added value is calculated as a multiple of the percent of added value by the total of exports.

(3) The source: components of primary inputs in exports out of the input-output update table 1995 - the CBS.

(4) Including expenses in Israel of foreign workers; see also Table 23.

(5) Export of goods, which is adjusted to the balance of payments, includes also export of crude diamonds, export to Judea and Samaria area and other adjustments, and is distinguished from the total of agricultural and industrial exports, as presented in the table.

(6) Incl. factor income.

(7) According to foreign trade statistics.

(8) Industrial exports - net.

(9) Not including expenses of foreign workers.

(1) המקור: נתוני מאזן התשלומים וסחר חוץ - הלמ"ס.

(2) סך הערך המוסף מחושב כמכפלה של אחוז הערך המוסף בסך היצוא.

(3) המקור: מרכיבי התשומות הראשוניות ביצוא, מתוך לוח עדכון תשומה-תפוקה 1995 - הלמ"ס.

(4) כולל הוצאות בארץ של עובדים זרים; ראו גם לוח 23.

(5) יצוא סחורות המותאם למאזן התשלומים כולל גם יצוא יהלומים גולמיים, יצוא לאזור יהודה והשומרון והתאמות אחרות, להבדיל מסך היצוא החקלאי והיצוא התעשייתי, כמוצג בהמשך הלוח.

(6) כולל הכנסות מגורמי ייצור.

(7) לפי סטטיסטיקה של סחר חוץ.

(8) יצוא תעשייתי נטו.

(9) לא כולל הוצאות של עובדים זרים.
