Previous Press Release on Foreign Trade appeared on January 20, 2009

Israel's Foreign Trade by Country – January 2009

In January 2009, import and exports of goods totaled \$3.5 billion each.

The above is based on **temporary data** regarding goods that cleared Customs, not including trade between Israel and the Palestinian Authority.

Main Trading Country Groups (in US million dollars)	Imports		Exports		Trade Balance	
	January		January		January	
	2009	2008	2009	2008	2009	2008
Total	3,452.4	5,237.6	3,524.3	5,189.7	71.9	-47.9
European Union	1,254.6	1,820.4	1,112.5	1,600.4	-142.1	-220.0
U.S.A.	438.7	693.9	1,174.2	1,610.5	735.5	916.6
Asia	815.0	1,185.4	606.2	1,230.1	-208.8	44.7
Other Countries	944.1	1,537.9	631.4	748.7	-312.7	-789.2

The above is based on **temporary data** regarding goods that cleared Customs, not including trade between Israel and the Palestinian Authority. Final data for 2008 will be published on April 2009. In addition, the data do not include import and export of services that include, among others, software. Data on all exports and imports of goods and services are published as part of the Balance of Payments, every quarter.

Imports are valued c.i.f., and exports are valued f.o.b.

Written by Helen Brusilovsky

Please contact the Press Relations Unit, at 02-652 7845, 050-623 5124

Development of trade in goods in January 2009, compared with October, was influenced by changes in the value of the U.S.A. Dollar against other currencies in which **import and export** transactions are conducted. Compared to the Euro the U.S.A. Dollar rose by 1.5%, compared to the UK Pound rose by 3.1%, compared to the Swiss Franc dropped by 1.5% and compared to the Japanese Yen the U.S.A. Dollar dropped by 0.9%.

Trade Balance

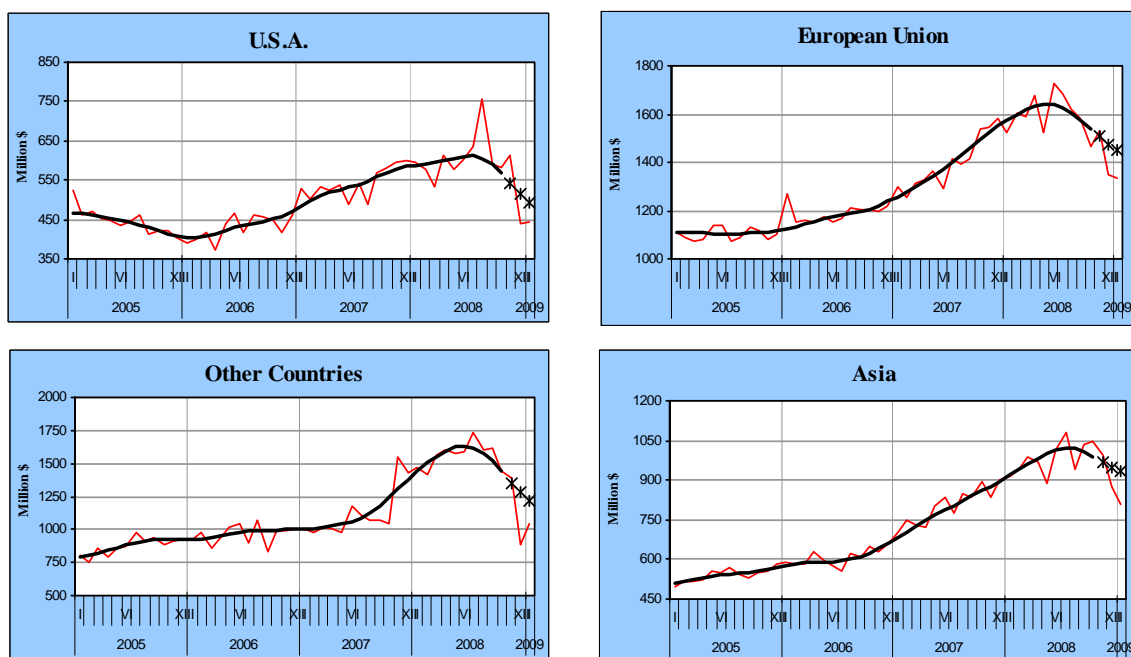

The trade balance (excluding diamonds) shows a deficit of \$0.5 billion in January 2009 (\$1.4 billion in the same month of 2008). The trade balance (excluding diamonds) by main country groups shows a surplus of \$0.4 billion with USA, a deficit of \$0.2 billion with EU countries, a deficit of \$0.3 billion with Asian countries and a deficit of \$0.4 billion with Other Countries group.

Imports of goods

Import of goods (excluding diamonds), in current prices in U.S. dollars, totaled \$3.3 B.

The trend data calculated by the Central Bureau of Statistics, seasonally adjusted for irregular elements, point to drop on **imports of goods** of 28.7%, at an annual rate, during November-January 2009.

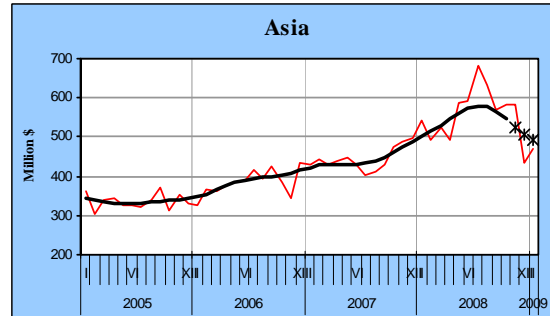

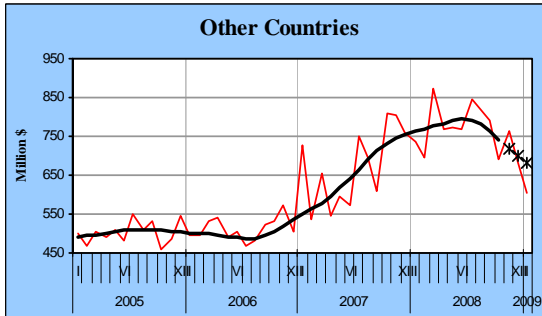

Trend data by main country groups indicates that imports from **EU countries** point to a drop of 21.3%, at an annual rate, during November-January 2009. Imports from **USA** point to a drop of 44.1%, imports from **Asia** point to a drop of 20.3% and imports from **Other Countries** point to a drop of 48.9% during the last three months.

— Trend data — Seasonally adjusted data The last 3 points are subject to substantial revisions

Exports of goods

The trend data calculated by the Central Bureau of Statistics, seasonally adjusted and adjusted for irregular elements, point to a drop of **export of goods** (excluding diamonds) of 23.0% during November-January 2009 at an annual rate.

— Trend data — Seasonally adjusted data The last 3 points are subject to substantial revisions

Trend data by main country groups indicates that exports to **EU countries** point to a drop of 23.5%, at an annual rate, during November-January 2009. Exports to **USA** dropped by 9.9%, exports to **Asia** point to a drop of 34.2% and exports to **Other Countries** group point to a drop of 30.1% during the last three months.

Next Press Release on Israel's Foreign Trade will appear on March 18, 2009.

DEFINITIONS AND EXPLANATIONS

The Population Investigated

1. Statistical data on foreign trade presented in the publications of the Central Bureau of Statistics and in this Monthly Bulletin relate solely to import and export of commodities. Data on import and export of services and the remaining international business of Israel are included in the Balance of Payments published quarterly in the "Monthly Bulletin of Statistics" and in greater detail in the Current Statistics series.
2. Imports and exports are recorded according to the "Special System"¹, by which only that portion of the trade flowing through customs is included. Accordingly, imports do not include goods imported and stored in bonded warehouses, and exports do not include goods exported from these warehouses. Neither included are goods in transit.
 - a. **Gross imports** include consignments imported from abroad for local use (including finishing and repair) which are freed by the Customs immediately after unloading, or which were freed after a time from the bonded warehouses of the Customs. Import data do not include commodities put into bonded warehouses, except for a number of productive enterprises, which are recognized as bonded warehouses. Imports do not include consignments which were exported in the past and which were returned to Israel without any further processing.
 - b. **Net imports** are obtained by deducting from gross imports the value of goods imported earlier and returned to a supplier abroad without processing or changing its form. As there is no way of identifying the date of entry of the goods to Israel which are being returned abroad, the deduction is done on the date of return abroad. For this reason the returns are deducted from the grand total and not from items detailed by branches.
 - c. **Gross exports** include the flow of products abroad, except consignments of commodities which were previously imported and then returned to a supplier abroad without any processing. It also includes part-finished goods which are sent abroad for additional processing and which eventually will be returned to the sender, and goods which were imported and sold to abroad without processing, when the purchaser is not the supplier.
 - d. **Net exports** are obtained by deducting from the value of gross exports the value of goods, which were previously exported but were returned to the Israeli supplier without processing or change of form. As there is no means of identifying the original date of consignment abroad of exports returned from abroad, the deduction operates on the date of return rather than the date of original export. For this reason returns are deducted from the grand total and not from items detailed by branches (excluding diamonds).
3. The date of statistical registration of the import is the date of the release of the goods by the Customs authorities, whereas for exports it is the date of loading the goods on ship, airplane, or trucks (land transport to Jordan).
4. Foreign trade statistics include, among others, the following goods and business activities:
 - a. Personal import and export: personal effects of immigrants, seamen, returning residents and foreign diplomats (import) and of emigrants (export).
 - b. Parcels dispatched by mail (in recompense or as gifts).
 - c. Ships and aircraft are included in import and export data whether they have passed through Customs or not. Imports include ships purchased from abroad by Israeli companies and sailing under Israeli flag or a foreign flag. It should be noted that ships and aircraft do not undergo the procedure of passing through Customs.

Exports include ships and aircraft, which were produced in Israel and those, which were previously purchased and later resold abroad in the reporting period.

¹ United Nations, *International Trade Statistics Concepts and Definitions*, Statistical Papers, Series M, No. 52/ Rev. 2, 1998.

- d. Products for exhibitions and fairs are, in principle, included in foreign trade data only if they were sold or given away free of charge. Returns from exhibitions are not included in foreign trade but there are difficulties in identifying these flows.
- e. Equipment imported or exported on a lease basis (e.g., electronic computers and other data processing equipment).
- f. Gold and silver (non-monetary), both in processed or partly processed form, scrap and remnants intended for industry, smelting or medical use.
- g. Fuel and food supplied to foreign ships and aircraft in Israeli ports are included in export since 1969, even though they did not pass through Customs.

5. Special transactions and commodities not included in foreign trade statistics:

- a. Commodities imported or exported for a limited period of time and returned without having undergone any processing, e.g. personal effects of tourists (including cars); goods intended for exhibitions, fairs, displays, etc.; commodities intended for temporary storage only; equipment sent to perform contract work and returned after use.
- b. Effects purchased by tourists in Israel or by Israelis abroad. An estimate of the value of these purchases is included in the account of services in the Balance of Payments. In cases where duty has been charged on goods purchased by Israeli tourists, the goods were included in total imports.
- c. Engines and parts of aircraft sent by local airlines to their branches or representatives abroad for replacement or repairs and those sent to Israel from branches abroad for repairs or replacement.
- d. Fish caught by Israeli fishing vessels.
- e. Monetary gold, securities and legal tender (notes and coins) or currency about to be made legal tender (local currency notes printed abroad are recorded according to the value of the printers and not according to face value).
- f. Fuel and food supplied to Israeli ships and aircraft in foreign ports (recorded in Balance of Payments as services).
- g. Ballast and dunnage supplied to foreign ships in Israeli ports and to Israeli ships in foreign ports.
- h. Imported military equipment and weapons (estimated value is included in the commodities account in the Balance of Payments). The flow is not included in the import of goods because it does not undergo the usual procedure of passing through customs.

6. The trade with the Palestinian Authority

The trade data do not include the transactions with residents of the Palestinian Authority. The data also do not include the value of the import and export commodities, which were released by the Israeli customs and belong to residents of the Palestinian Authority. Data on trade with Palestinian Authority is published within the Balance of Payment.

Classification of Commodities

1. The classification, according to which foreign trade statistics are processed and published, is the classification that serves the customs² in handling the import and export shipments. Import data are classified according to the details in the customs tariff³ and export data - according to the "Classification of Export Commodities"⁴.

As of January 1st 1988, the customs' classification of commodities, which serves the customs and statistical data processing, was based on a new international nomenclature, which was prepared by the Customs Cooperation Council – "The Harmonized Commodity and Coding System" (H.S.)⁵. This nomenclature replaces the Nomenclature "Classification of Goods in Customs Tariff" of which the first version was introduced at 1962 named "Brussels' Tariff Nomenclature" (B.T.N.) and the last version was the C.C.C.N. – "Customs Cooperation Council Nomenclature". In the special Supplement to Quarterly No. 4, 1988, details are presented on the new nomenclature, its aims, structure, and its principles of classification.

2. **S.I.T.C.**⁶

Import and export data are also classified according to the U.N.⁷ Standard International Trade Classification, in which goods are classified in groups that are better suited for statistical presentation. This classification is obtained by a special sorting of details in the customs classification and their concentration in groups according to the structure of the classification. More details on the S.I.T.C. and its last version are presented in the Supplement to the Foreign Trade Quarterly No. 1, 1988.

3. **Classification by Economic Branches**

Export data is presented by branch of origin, meaning: the classification was done by the economic branch to which the product pertains by character. The division of the products into branches was done based on the description of the goods in the goods classification and not based on the exporter's branch. The definition of the branches is based on the classification of economic branches prepared by the Central Bureau of Statistics.

Starting with Quarterly No.1, 1995, data are published on export goods classified by new branch (origin)⁸. Until this Quarterly export goods were classified according to the "Standard Industrial Classification of All Economic Branches 1970" (Technical Publication No. 46).

Starting with Monthly No.8, 2003, data on export goods are published classified by new branch (origin)⁹.

Export data classified by new branch can be obtained from the Bureau's database starting 1988.

4. **Classification by Economic destination.**

This classification, according to which data on imports are presented, divides the items by three uses: consumer goods, raw materials for production and investment goods. Each use is sub-divided into secondary groups. In certain cases when a product is intended for more than one use, this product's import value is divided into the appropriate uses (e.g. passenger cars are both consumer goods and investment goods; sugar functions as consumer goods as well as a raw material).

⁶ United Nations, *Standard International Trade Classification, Revision III*, Statistical Papers, Series M, No. 34, New York 1986.

⁷ <http://unstats.un.org/unsd/cr/registry/regcst.asp?Cl=14>

⁸ Central Bureau of Statistics, *The Standard Classification of All Economic Activities 1993*, Technical Publication No.63, Jerusalem 1993.

⁹ Central Bureau of Statistics, *The Standard Classification of All Economic Activities 1993*, Technical Publication No. 63, Second Edition, Jerusalem 2003.

In this classification the division of imports is into primary uses of the goods, i.e. the first use made of them: consumption, as raw materials - for production, or investment. Unprocessed and partly processed goods and components for assembling machinery and automobiles are classified as "raw materials". Spare parts, tools and accessories for additional use are also included under "raw materials". The classification by economic use is based on "Survey of Import Destination" which is conducted once in several years by the Central Bureau of Statistics.

The Classification of Import Commodities, by economic destination was updated in the No.3, 1993 Quarterly, as based on the Import Destinations Survey 1988. The results of that survey were published in Special Publication No. 952¹⁰. Until the said quarterly, commodities were classified according to the 1982/83 survey, and henceforward they are classified according to the 1988 survey. The results of that survey were published in Special Publication No. 787¹¹.

5. Countries

- a. The country of import might be, "the country of purchase", "the country of origin" or "the country of dispatch". "The country of purchase" is defined as the country from which the invoice for the goods imported was sent; "the country of origin" is defined as the manufacturing country of the goods; "the country of dispatch" is defined as the country in which the goods were loaded on ship, airplane, or trucks. In some cases, "the country of purchase" is different from "the country of origin" and from "the country of dispatch".
- b. The country of export (destination) is defined as "the country of sale", i.e. the country of the purchaser. In fact the country of export is recorded as the country to which the invoice for the goods exported was sent. In certain cases "the country of export" is different from the country of consumption and the country of shipment.
- c. As from the agricultural export season of 1991/92 with the dissolution of the Board of Citrus Marketing and transfer of export to other companies, most shipments of this export arrive to Belgium, and are bought by various agents. As a result, there is no information on the country of the (final) destination of the commodity. Also the sale of flowers through the flower exchange is recorded as exports to Netherlands without no possibility to classify by country of final destination.
- d. Data on the import and export of commodities are published according to countries, blocs, regions and continents. The countries within the group are arranged alphabetically according to the Hebrew name of the country within the group.
- e. List of changes introduced to countries and blocs:
 - Through accession of the German Republic to the Federal Republic of Germany with effect from 3 November 1990, the two German States have united to form one sovereign state. As from that date all data shown referring to the Federal Republic of Germany are under the designation of "Germany".¹²
 - In 1991 the Union of Soviet Socialist Republic formally dissolved into 15 independent countries: Ukraine, Azerbaijan, Estonia, Armenia, Belarus, Georgia, Russian Federation, Latvia, Lithuania, Moldova Republic, Uzbekistan, Tajikistan, Turkmenistan, Kazakhstan and Kyrgyzstan. From June 1st 1992 onward data are shown for the individual countries.¹³
 - Beginning September 1st 1992 the former Yugoslavia data is referred to the new sovereign countries: Bosnia and Herzegovina, Croatia, Slovenia, the Federal Republic of Yugoslavia and Yugoslavia republic of Macedonia.¹⁴
 - On June 4, 2003, the official name of the Federal Republic of Yugoslavia has been changed to Serbia and Montenegro.

¹⁴ Central Bureau of Statistics, 'Foreign Trade Statistics Quarterly' No. 4, 1992, Vol. 43

- As of January 1st 1994 Czech Republic data is referred separately to Czech Republic and Slovakia.
- From June 2004, the following countries joined the European Union: Estonia, Hungary, Latvia, Lithuania, Malta, Slovenia, Slovakia, Poland, Czech Republic and Cyprus.¹⁵
- Trade data concerning Luxemburg and Belgium are published separately for each country. Exceptionally, are two tables, in which until 1994 data of both countries were published jointly: (a) Table 13 – “Exports, Imports and Trade Balance, by Country, of Purchase and Destination”; (b) Table 14 – “ Main Trading Countries, by Commodity Groups”.

Also in table 12, “Exports to Main Trading Partners, by Commodity Groups”, joint data was published for both countries. But since 4th quarter 1994 its publication stopped.

The Value of Commodities

1. **The value of imports** is determined by the importers' report to Customs being based on the value of the transaction as defined in the Treaty of Brussels on the Evaluation of Goods for Customs Purposes (1950). The value of the transaction represents the value for which the goods were sold supplemented by expenditure on transportation and insurance as far as the border of the importing country, including costs of unloading at the exporting port. This definition of the value of the transaction in imports corresponds to the value of the goods according to C.I.F. (Cost, Insurance, Freight).

In most of the cases, the value for Customs purposes includes an imputation of local costs - wharfage and portorage fees.

Import taxes and other taxes levied on imported goods are not included in the value for Customs purposes.

In the event of import of products unaccompanied by monetary recompense, where difficulty exists in determining the value of the transaction (as in the case of gifts), the value is determined by an estimate based on market price. So, for example, the cost of import of gifts for museums is based on the valuation of an insurance assessor.

If imported commodities are freed against a deposit, the import is recorded according to the date of release against the deposit until the final settlement of the account. The amendment of this import is recorded with final settlement, which is also dated according to the actual release of the goods (in other words an amendment of the value of the import may take place after several months).

2. **Import** data are recorded in the import entry forms in the currency of the transaction and are calculated in Israeli Shekels, according to the exchange rate on the date they are freed by customs and are converted into U.S. dollars too. The exchange rates for these purposes are the exchange rates for customs purposes on the date of the presentation of the entry forms. In the publications on Foreign Trade, the values of imports and exports are presented in U.S. dollars.

Since the floating of the Israeli Pound in November 1977, the rates of exchange between major foreign currencies and the Pound or the Shekel are determined for customs according to the rate dictated by the customs authorities on the basis of data provided by the Bank of Israel. To the extent that exchange rates fluctuate more than 2 percent in the daily rate of any currency, as fixed by the Bank of Israel, so the rates for customs purposes may be changed even in the middle of the week

December 1980 and September 1985 changes were introduced concerning Israeli currency: December 1980 the prevailing currency, the Lira, was changed to shekel. The exchange rate was 10 Lira was equivalent to 1 Shekel. September 1985 the Shekel was changed into New Shekel. The exchange rate was 1,000 Shekels were equivalent to 1 New Shekel.

¹⁵ Central Bureau of Statistics, ‘Israel’s Foreign Trade by Country - May 2004’, Press Release 152/2004, June 17, 2004

3. **The Value of exports** data are recorded according to F.O.B. (free on board) transaction values before discounts and commissions are paid to foreign factors.
4. **Export** data are recorded in the export entry forms in Israeli Shekels and in the currency in which the transaction is made. The conversion into U.S. dollars is carried out in the monthly summaries, according to the rate on the day the transaction was registered at customs.

Data Sources

The main sources for imports and exports data are the forms submitted to the customs authorities by importers and exporters (import and export entry forms).

Seasonally Adjusted Data

Several data series are presented Seasonally Adjusted.

Beginning January, 2005 the data analysis is done by means of the improved computer program X12-ARIMA/2000, replacing X12-ARIMA/2000 used before. This analysis is based on moving averages, which calculates the seasonal factors-S for each month. These factors may change by use of supplemented or updated data.

The seasonally adjusted data are estimated using the X-12-ARIMA seasonal adjustment method that was developed by the US Census Bureau and by a procedure developed in the Central Bureau of Statistics (CBS) for the simultaneous estimation of the moving festival dates and the number of trading days effects in Israel¹⁶.

The seasonally adjusted data are calculated by adjusting the original data for the influence of seasonality and festival and trading day effects. Trend data are estimated by removing the irregular influences (noise) from the seasonally adjusted data.

The seasonally adjusted data and the trend are subject to revisions as they are calculated anew, each month or quarter, on the basis of original data that include an additional observation (concurrent seasonal adjustment).

Starting 'Foreign Trade Quarterly' No. 1, 1995, 8 new export series and 5 additional import series are published. Monthly data for 1988 and onward can be obtained from the Bureau's database for each basic series and for series totals.

¹⁶ A detailed and updated explanation on the seasonal adjustment procedure and trend estimation is given in the publication "Seasonal and prior adjustment factors for 2007, trends for 2003-2007"(internet only, at the C.B.S.: "Classification and methods, statistical methods, time series"): <http://www.cbs.gov.il/publications/tseries/seasonal08/presentationh08pdf>
