הנתונים מבוססים על: רשות האוכלוסין וההגירה, מרשם האוכלוסין.

1. החל משנת 2010 לוח התמותה מחושב משיעורים סגוליים עד גיל 94, בשנים הקודמות הלוח חושב ע"ס שיעורים סגוליים עד גיל 84.
2. תוחלות חיים לגילים 85 ומעלה לקוחות מלוחות תמותה שלמים לאחר תיקון אומדנים לאוכלוסיה מבוגרת.
3. תוחלות חיים לגילים 85 ומעלה אינן מוצגות בשל הטיה באומדני האוכלוסייה בגילים מבוגרים מאוד.

Data based on: Population and Immigration Authority, Population Register.

1. As of 2010, the life table is calculated according to specific rates until age 94. In previous years, the table was calculated according to specific rates until age 84.

2. The life expectancies of 85 years and older are calculated from the complete life tables after improving the estimation of the old-age population.

3. The life expectancies of 85 years and older are not displayed due to bias in the estimates of the old-age population.
