PREFACE

This publication presents data from the *Household Expenditure Survey* for 2016. The publication is meant to meet the needs of state institutions, research institutes, government ministries, consumers and other agencies, for up-to-date and detailed data on household income and expenditure in Israel.

The survey was first performed in the early 1950s; until 1997 it took place approximately once every five years. Since 1997, the Central Bureau of Statistics has been performing the survey on a regular annual basis, among the total population of households.

From 1997–2011, the CBS investigated household incomes in two separate surveys: the Household Expenditure Survey and the Income Survey, as part of the Labour Force Surveys. Data from the two surveys were combined into one system and were presented based on both surveys.

As of 2012, the Income Survey was detracted from the Labour Force Survey, and the Household Expenditure Survey sample was expanded and augmented.

Conducting the survey on a regular basis has improved the national statistics in several ways, notably:

- The base for the Consumer Price Index was adjusted as of January 1999 every two years -- on the basis of these surveys. The index weights as of January 2017 are based on the average for the years 2014 and 2015.
- The ability to integrate household expenditure data each year has improved the National Accounts data.

Several units at the Central Bureau of Statistics took part in designing and carrying out the survey. The Department of Surveys staff gathered data from households. The Department of Statistical Methodology staff determined the samples and the weighting methods. The Consumption and Finance Sector staff entered, edited, processed the data and prepared them for publication.

The Central Bureau of Statistics is especially grateful to the thousands of households that took part in the survey, displayed patience and much responsibility, and helped substantially to enhance Israel's statistical database.

INTRODUCTION

1. GENERAL

The 2016 Household Expenditure Survey is the 20th in a series of ongoing surveys that have been conducted by the Central Bureau of Statistics since 1997.

From 1997–2011, the CBS Investigated household incomes in two separate surveys: The first was the Household Expenditure Survey (the survey sample included an average of about 6,000 households, annually); the second one was the Income Survey, which was conducted in combination with the quarterly ongoing Labour Force Survey, in which a fourth of the households were asked about their income (the survey sample was an average of about 8,500 households, annually). Data from the two surveys were combined into one system and presented as integrated results. The Integrated Income Survey sample included an average of 14,500 households, annually.

As of 2012, due to the transition of the Labour Force Survey from a quarterly survey to a monthly one, the Income Survey was removed from the Labour Force Survey, and instead the Household Expenditure Survey sample was expanded by approximately 3,000 households. In 2016, the sample included 8,903 households.

All the data on expenditures, income and compulsory payments in this publication are based on the "Household Expenditure Survey".

As of 2012, in addition to the expansion of the survey's sample, changes were made in the survey population, in the survey questionnaire, and in survey estimates, as follows:

1. The sample population of the survey was expanded and now includes collective moshavim and renewed kibbutzim which have engaged in a process of privatization (excluding collective kibbutzim). As of 2016, it includes the Bedouin population in permanent localities once again (from 2012–2015 this population was not surveyed due to difficulties in carrying out interviews). As a result, the population coverage was increased from about 95% to about 97%.
2. Definition of soldiers in compulsory military service as employees. Until 2012, the income of soldiers in compulsory military service was included in “other income from work”. However, in accordance with the ILO Conventions and Recommendations, the CBS, like most other developed countries, decided to measure the entire labour force instead of the civilian labour force. This was

done by adding soldiers in compulsory military service to the labour force in Israel. Following this decision, as of 2012 the income of employees and income from employed work also includes the income of soldiers in compulsory military service.

3. Augmenting the sample among the Arab population of northern localities. The sample was augmented to provide more reliable estimates of the Arab population.
4. Changing the estimation method. The estimation method is intended to reduce sampling errors as well as biases that can occur due to differences between the characteristics of the households that did not respond to the questionnaire and those that responded. As of 2012, estimation of the population in the Household Expenditure Survey was adjusted to the new structure of the monthly Labour Force Survey.

Most of the changes mainly affect household and individual income. Therefore, as of 2012, there is a break in the series of income data compared with previous years.

As of the 2014 publication, tables on Jewish households by level of religiosity were added (Tables 13, 22, 34, and 35). This was based on a question added to the 2014 survey on the main lifestyle of the household, in terms of religion. The categories were secular, traditional, religious, very religious (for Jews – ultra-Orthodox), mixed lifestyle and “other”.

2. MAIN FINDINGS

The findings are based on a sample of 8,903 households in 252 urban and rural localities, representing 2,497,000 households in the population.

A. Income and Expenditure, by Status at Work of Head of Household and Income Composition (Table 12)

Average monthly gross money income per household, from all sources of income – work, capital, allowances and assistance – was NIS 19,118 in 2016. The median gross money income was NIS 14,763. After deducting compulsory payments (income tax, National Insurance, National Health Tax) the average net money income was NIS 15,751; the net money income per person was NIS 4,774 per month and the net money income per standard person, which is accepted as a measure of the standard of living, amounted to NIS 5,800 per month. Income from work (NIS 14,983) was 78.4% of the money income of households in 2016, and 11.3% (NIS 2,165) was from allowance and assistance.

The average consumption expenditure, which includes an estimate on expenditure for housing services and an owned vehicle, totaled NIS 15,805 a month in 2016. The average money expenditure per month was NIS 12,792 – 81.2% of the net money income per household.

In 2016, The average number of persons in a household was 3.3, and the average number of earners per household was 1.5.

Gross money income of households in which the **head of household is an employee** was an average of NIS 21,498 per month per household in 2016. Less compulsory payments, the net money income for households of employees was NIS 17,591.

The average age of the head of the household in households headed by an employee was 41.5, the average number of persons per household was 3.7 and the number of earners was 1.9 per household. Money expenditure of these households comprised 77.9% of net money income per household (NIS 13,698 monthly expenditure compared to NIS 17,591 net money income).

Gross money income of households in which the **head of household is self-employed** was an average of NIS 23,465 per month per household in 2016. Less compulsory payments, the net money income for households of the self-employed was NIS 18,386.

The average age of the head of the household in households headed by a self-employed person was 48.2. The average number of persons per household was 3.6 and the average number of earners was 1.9 per household.

In 2016, 61.9% of the money income of households headed by a self-employed person originated from income from self-employment and occasional work (NIS 14,524) and 23.1% from income from wages and salaries (NIS 5,422). Money expenditure of these households comprised 91.1% of net money income per household (NIS 16,764 monthly expenditure compared to NIS 18,386 net money income).

Gross money income of households in which the **head of household was not working** was an average of NIS 8,397 per month per household in 2016. The net money income per household was NIS 7,849 This income comprises 44.6% of the net money income of households headed by employees and 42.7% of the net money income of households headed by self-employed persons.

The average age of the head of the household was 67.8, the average number of persons per household was 1.9.

Table A. Average Monthly Income and Expenditure of Households, by Status at Work of Head of Household and by Source of Income, 2016

Characters	All Households	Households Headed by Employee	Households Headed by Self-Employed Person	Households Headed by Non-Working Person

Median of gross money income per household (NIS)	14,763	17,222	18,262	5,900
Gross money income per household (NIS)	19,118	21,498	23,465	8,397
Net money income per household (NIS)	15,751	17,591	18,386	7,849
Net money income per standard person (NIS)	5,800	6,001	6,298	4,253
Money expenditure per household (NIS)	12,792	13,698	16,764	7,470
Gross money income per household (percentages)	100.0	100.0	100.0	100.0
Income from work – total (percentages)	78.4	85.9	85.0	0.5
Income from wages and salaries (percentages)	67.9	82.8	23.1	0.0
Income from self-employment and occasional work (percentages)	10.5	3.1	61.9	0.5
Income not from work – total (percentages)	21.6	14.1	15.0	99.5
Income from capital percentages	3.0	2.3	4.0	8.5
From pensions and provident funds (percentages)	7.3	3.7	4.4	43.5
From allowances and assistance (percentages)	11.3	8.1	6.6	47.5
Thereof:				
From allowances from National Insurance Institute (percentages)	8.4	5.9	4.4	37.3

B. Income and Expenditure by Level of Religiosity and Income Composition (Table 13)

Average monthly gross money income in **Jewish households** was NIS 20,595 in 2016 and the average monthly money expenditure was NIS 12,964. The average number of persons in these households was 3.1 and the average number of earners per household was 1.5 (about half of the Jewish households described themselves as secular).

In self defined **secular households** the income was the highest and the number of persons was the lowest – the average monthly gross money income was NIS 22,061. Less compulsory payments, the net money income per household was NIS 17,633. The average number of persons per household was 2.6 and the net income per standard person was NIS 7,516 per month.

The income was the lowest among self-defined **ultra-Orthodox households** and the number of persons in these households was the highest. The average monthly gross money income was NIS 13,658. Less compulsory payments, the net money income per household was NIS 12,189. The average number of persons per household was 5.4 and the net income per standard person was NIS 3,180 per month, which was only 42.3% of the equivalent income for secular households. The average number of earners was 1.3 earners.

The composition of income in ultra-Orthodox households was 67.2% from work, 23.4% from allowances and assistance (of which 12.0% was allowances from the National Insurance Institute), and 4.1% from pensions and provident funds. In secular households the income composition was 79.3% from work, 9.5% from allowances and assistance, and 7.9% from pensions and provident funds.

**Table B. Average Monthly Income and Expenditure of Jewish Households,
by Self Defined Level of Religiosity and by Source of Income, 2016**

Characters	Total Jews	Secular	Traditional	Religious	Ultra-Orthodox	Other/Not Known
Households in sample – total	7,274	3,638	1,766	909	704	257

C. Composition of Consumption Expenditure

The average expenditure on the basket of household goods and services amounted to NIS 15,805 a month in 2016, an increase of 3.1% in real terms, compared with the consumption expenditure in 2015 (NIS 15,407 a month).

The main components of the basket were: "Housing" – NIS 3,846 per month, 24.3% of the basket (24.7% in 2015); "Transport and communications" – NIS 3,204 per month, 20.3% of the basket (20.1% in 2015); "Food" (including "Vegetables and fruit") – NIS 2,637 per month, 16.7% of the basket (16.3% in 2015); "Education, culture and entertainment" – NIS 1,857 per month, 11.8% of the basket (11.8% also in 2015).

Table C. Composition of Consumption Expenditure per Household, 2015–2016

Consumption group	NIS per month 2015	Percent -ages 2015	NIS per month 2016	Percent -ages 2016	Change in expenditure Percent-ages ¹	Change in prices Percent-ages ²	Real change Percent-ages ³
Consumption expenditure – total	15,407	100.0	15,805	100.0	2.6	-0.5	3.1
Food	2,032	13.2	2,116	13.4	4.1	-1.3	5.5
Vegetables and fruit	485	3.1	521	3.3	7.3	0.5	6.8
Housing	3,812	24.7	3,846	24.3	0.9	2.2	-1.3
Dwelling maintenance	1,463	9.5	1,431	9.1	-2.2	-1.3	-0.9
Furniture and household equipment	564	3.7	614	3.9	8.8	-2.1	11.1
Clothing and footwear	490	3.2	518	3.3	5.7	-0.2	5.9

Education, culture and entertainment	1,818	11.8	1,857	11.8	2.2	-0.2	2.4
Transport and communications	3,094	20.1	3,204	20.3	3.6	-3.7	7.6
Miscellaneous goods and services	776	5.0	798	5.0	2.8	0.2	2.5

1. The change in expenditures between 2015 and 2016 (NIS), in percentages.
2. The percentile change in prices according to the index of the group, between 2015 and 2016.
3. The percentile change in expenditure less the change in prices.

D. Composition of the Consumption Expenditure over Years (Table 1.2)

During the past six decades the share of expenditure on food has dropped from 42% of the consumption basket in the 1950s, to 16.5% of the consumption basket in 2016.

The percentage of expenditure on housing increased from 1997 to 2016 by 2.1 percentage points.

The percentage of expenditure on health increased gradually over the years – an increase of approximately 1.9 percentage points from 1997 to 2016.

Table D. Composition of Consumption Expenditure per Household, Selected Years

Consumption	2001	2003	2005	2007	2009	2011	2013	2015	2016
Consumption expenditure - total - current prices (NIS)	10,053	10,139	10,816	11,584	13,009	13,967	14,501	15,407	15,805
Fixed prices for 2016 (NIS)	13,040	12,360	13,067	13,636	14,170	14,321	14,399	15,323	15,805

Health (percentages)	4.9	4.8	5.1	5.3	5.2	5.3	5.7	5.7	5.7
Education, culture and entertainment (percentages)	13.4	13.5	13.5	13.3	13.5	12.3	12.1	11.8	11.8
Transport and communications (percentages)	20.1	19.8	20.4	20.1	19.5	20.1	20.0	20.1	20.4
Miscellaneous goods and services (percentages)	4.7	4.5	4.9	4.7	4.4	4.5	4.9	5.0	5.1

E. Consumption Expenditure by Quintiles (Table 1.1)

Income data are used as explanatory variables for the distribution of household expenditures by various income groups, such as income deciles and income quintiles.

The distribution of households by **quintiles of net income per standard person** indicates that the money income for a household in the upper quintile (NIS 29,102 per month) was 4.8 times more than that of the lowest quintile (NIS 6,009 per month), and the monthly consumption expenditure per household in the upper quintile (NIS 22,820 was 2.2 times higher than in the lower quintile (NIS 10,058). Among households in the upper quintile, the average number of persons was 2.6, and the average number of earners was 1.7 earners, whereas larger households were concentrated in the lower quintile – an average of 4.1 persons and 0.9 earners per household.

Due to the significant differences between the quintiles in total household expenditures on the one hand, and in household size on the other, the expenditure per person in the upper quintile was 3.6 times more than the expenditure per person in the lower quintile.

In the lower quintile, 51.3% of the total expenditures were for basic goods such as food, housing, clothing, and footwear; in the upper quintile, the percentage of the expenditures on these basic goods was lower (39.8%).

In the upper quintile, the monthly expenditure on food, including fruit and vegetables (NIS 3,183 per household) was 13.9% of the total household expenditure. In contrast, the monthly expenditure on food including fruit and vegetables in the lower quintile (NIS 2,296) was 22.8% of the total household expenditure.

An additional difference in the expenditure can be found in the item "Meals away from home". Households in the upper quintile spent NIS 819 a month on this item – 4.5 times more than the monthly expenditure of households in the lower quintile on this item (NIS 183).

Table E1. Monthly Consumption Expenditure of Quintiles of Households, by Net Income per Standard Person, 2016

Characters	All households	Lower quintile (1)	Middle quintile (3)	Upper quintile (5)
Persons in household	3.3	4.1	3.2	2.6
Earners in household	1.5	0.9	1.7	1.7
Net money income per household (NIS)	15,751	6,009	14,299	29,102
Money expenditure per household (NIS)	12,792	8,517	12,224	18,111

Table E2. Monthly Consumption Expenditure of Quintiles of Households, by Net Income per Standard Person, 2016

Consumption group	All households NIS per month	All households Percentages	Lower quintile (1) NIS per month	Lower quintile (1) Percentages	Middle quintile (3) NIS per month	Middle quintile (3) Percentages	Upper quintile (5) NIS per month	Upper quintile (5) Percentages
Consumption expenditure – total	15,805	100.0	10,058	100.0	15,148	100.0	22,820	100.0
Food (Incl. vegetables and fruit)	2,636	16.7	2,296	22.8	2,516	16.6	3,183	13.9
Housing	3,846	24.3	2,473	24.6	3,825	25.3	5,266	23.1
Dwelling maintenance	1,431	9.1	918	9.1	1,329	8.8	2,094	9.2
Furniture and household equipment	614	3.9	456	4.5	587	3.9	771	3.4
Clothing and footwear	518	3.3	392	3.9	499	3.3	644	2.8
Health	900	5.7	467	4.6	799	5.3	1,538	6.7
Education, culture and entertainment	1,857	11.7	1,130	11.2	1,904	12.6	2,588	11.3
Transport and communications	3,204	20.3	1,367	13.6	2,911	19.2	5,618	24.6
Miscellaneous goods and services	798	5.0	559	5.6	777	5.1	1,116	4.9

The greatest difference between the upper and lower quintiles was in the item "Transport and communications". For this item, the monthly expenditure in the upper quintile was NIS 5,618 – 4.1 times higher than the expenditure in the lower quintile (NIS 1,367).

The item "Transport and communications" included several expenditure groups in which the difference between the quintiles was especially large. In the upper quintile, rides on public transport comprised only 0.9% of the households' Transport and Communications expenditure, compared with 8.6% in the lower quintile (NIS 80 compared with NIS 118 per month, respectively); expenditures in "travel abroad" comprised 31.4% of the total expenditure for "Transport and communications" of households in the upper quintile, compared with 12.6% among households in the lower quintile (NIS 1,767 compared with NIS 172 per month, respectively).

Households in the upper quintile spent NIS 2,588 per month on "Education, culture and entertainment" – approximately 2.5 times more than households in the lower quintile (NIS 1,130).

The expenditure on education services (tuition, courses, extracurricular activities and supplementary lessons) totaled NIS 946 per month among households in the upper quintile – approximately 1.5 times more than the monthly expenditure on that item among households in the lower quintile (NIS 646 per month).

F. Income and Expenditure by Deciles (Tables 2, 3 and 4)

In a distribution of households by deciles of net money income per standard person, it was found that the money expenditure of households in the three lowest deciles was higher than their income. (The survey's income data do not include non-recurring income such as inheritance and withdrawals from savings plans. Furthermore, only the money income reported to the interviewer is included, whereas benefits "in kind", such as discounts for education and municipal tax, are not included).

From the fourth decile on, income gradually exceeds expenditure. While in the fourth decile itself the difference between income and expenditures is small (a difference of 2.4%), in the upper decile the difference between income and expenditure is very high – 42.9%.

In 2016, the average gross money income of households was NIS 19,118 per month, compared with NIS 18,671 in 2015 – a real increase of 3.0%.

The gross money income of households in the upper decile was NIS 48,316 per month, compared with NIS 4,281 per month in the lower decile – 11.3 times more.

Nearly half of the monthly income of households in the lower decile originated in

allowances and assistance (48.5% of total income), and 49.9% was from work. In the upper decile, on the other hand, 5.6% of income was from allowances and assistance and 78.3% of income was from work.

**Table F. Monthly Income of Deciles of Households,
by Net Income per Standard Person, 2016**

Characters	Total	Decile 1	Decile 2	Decile 3	Decile 4	Decile 5	Decile 6	Decile 7	Decile 8	Decile 9	Decile 10
Net money income per household (NIS)	15,751	3,978	6,679	8,923	10,884	13,360	14,967	17,884	21,238	24,458	35,164
Money expenditure per household (NIS)	12,792	7,695	8,160	9,626	10,626	11,535	12,979	14,129	15,686	17,411	20,080
Gross money income – total (NIS)	19,118	4,281	7,185	9,723	11,995	14,957	17,111	20,999	25,785	30,861	48,316
Gross money income – total (percentages)	100.0										
From work (percentages)	78.4	49.9	64.0	70.0	76.7	79.0	81.4	81.7	82.2	81.6	78.3
From capital (percentages)	3.0	-	0.9	1.3	1.3	1.3	1.8	2.3	2.7	3.5	5.5
From pensions and provident funds (percentages)	7.3	-	1.4	3.7	4.5	5.9	6.2	6.2	7.5	8.4	10.6
From allowances and assistance (percentages)	11.3	48.5	33.7	25.0	17.5	13.8	10.6	9.8	7.6	6.5	5.6

G. Income and Expenditure by Number of Earners (Table 7)

In households without earners, the difference between net money income and money expenditure was small – a difference of 4.8%, whereas in households with three or more earners the difference was much greater – the income was greater than expenditure by 28.9%.

In 2016, the gross monthly money income **per household** without earners was NIS 8,397 whereas the gross monthly money income of households with three or more earners was NIS 31,364 per month – 3.7 times higher. When the income **per standard person** was compared, the difference decreased to 1.9 times. Because households with no earners comprise 1.9 persons on average, the gross monthly money income **per standard person** in these households was NIS 4,550. In contrast, the average number of persons in households with three or more earners was 4.8, and their gross monthly money income **per standard person** was NIS 8,719.

In households without earners (most of the elderly population falls into this group), 47.5% of the income (NIS 3,988) derives from allowances and assistance, and the main support is provided by the National Insurance Institute. In these households, 43.6% of the income (NIS 3,657) derives from pensions and provident funds.

Table G. Monthly Income per Household, by Number of Earners, 2016

Characters	Total	No earners	One earner	Two earners	3 earners or more
Average persons in household	3.3	1.9	2.9	3.9	4.8
Net money income per household (NIS)	15,751	7,849	11,374	20,101	25,567
Money expenditure per household (NIS)	12,792	7,470	10,415	15,700	18,169
Net money income per person (NIS)	4,774	4,164	3,938	5,202	5,346
Gross money income – total (NIS)	19,118	8,397	13,578	25,084	31,364
Gross money income – total (percentages)	100.0	100.0	100.0	100.0	100.0
From work (percentages)	78.4	-	71.5	89.8	91.0
From capital (percentages)	3.0	8.5	3.2	2.2	2.4
From pensions and provident funds (percentages)	7.3	43.6	8.4	2.4	2.6
From allowances and assistance (percentages)	11.3	47.5	16.9	5.6	4.0

H. Monthly Income per Household, by Type of Locality (Table 8)

In 2016, the lowest gross money income per household was in non-Jewish localities, and totaled NIS 12,541 per month. The number of standard persons per household in these localities was highest (3.4 standard persons), and the gross money income per standard person totaled NIS 3,670 a month.

The highest gross monthly money income per household was in the Jewish localities with 2,000-9,999 residents – NIS 26,903 per household. In these localities, the number of standard persons per household was high – 3.0 standard persons, and the gross money income per standard person was NIS 8,997.

Of the eight major cities with more than 200,000 residents (Jerusalem, Tel Aviv-Yafo, Haifa, Rishon LeZiyyon, Ashdod, Petah Tiqwa, Netanya, and Be'er Sheva) the lowest gross money income per household was in Jerusalem – NIS 14,192 a month. (The number of standard persons was 3.0, and the gross money income per standard person was NIS 4,712 a month). The highest gross money income per household was in Rishon LeZiyyon – NIS 23,724 a month. (The number of standard persons was 2.6, and the gross money income per standard person was NIS 9,231 a month).

I. Ownership of Durable Goods over the Years (Table 23)

In 2016, as in the previous years, there was a rise in the percentage of households that owned communications and entertainment products, as listed below:

Home computer – in 2016, 78.1% of all households had a computer, compared with 33.5% in 1997.

Internet subscription – in 2016, 75.4% of all households had an Internet subscription, compared with 4.6% in 1997.

Mobile phone – in 2016, 97.1% of all households had at least one mobile phone, and 75.9% of all households had two or more mobile phones. In 1997, only 37.8% of all households had at least one mobile phone, and 7.2% of all households had two or more mobile phones.

Land lines – compared to the products mentioned above, there was a big decrease in ownership of house phones. In 2016, 65.0% of all households had a regular telephone line, compared with 1997, with 95.0% had a regular telephone line - a decline of 30. percentage points in ownership of this commodity.

Table H. Ownership of Durable Goods, Selected Years, Percentages

Goods	2001	2003	2005	2007	2009	2011	2013	2016
Microwave	70.9	74.8	79.5	83.3	82.8	84.2	85.1	86.7
Dishwasher	29.2	31.1	32.5	33.3	35.0	36.0	37.7	40.9

Cable or satellite TV ¹	73.2	70.6	69.0	68.0	64.3	61.8	61.8	59.2
One car at least	56.6	57.2	57.7	60.9	62.2	63.8	67.3	70.3
Two cars or more	14.0	13.4	15.2	16.5	18.3	20.1	21.9	24.1

1. The subscription to satellite TV was added in 2001.

J. Ownership of Durable Goods in Household Deciles, by Net Income per Standard Person (Table 14)

Households in the higher deciles were found to own more durable goods than those in the lower deciles. The following differences between deciles in percentages of ownership of durable goods are noteworthy:

91.1% of all households in the upper decile had at least one car, and 49.5% had two cars or more, compared with 37.2% in the lower decile that had at least one car and 3.5% that had two or more cars.

94.8% of households in the upper decile had at least one computer, and 57.4% had two or more computers, compared with 53.4% in the lower decile that had at least one computer and 10.4% that had two or more computers.

45.7% of households in the upper decile had a water purification system, compared with 14.4% in the lower decile.

Table I. Ownership of Durable Goods in Deciles of Households, by Net Income per Standard Person (Percentages, unless otherwise stated), 2016

Goods	Households - total	Lower Decile	Fourth Decile	Seventh Decile	Upper Decile
Persons in household (absolute numbers)	3.3	4.1	3.3	3.2	2.4
Earners in household (absolute numbers)	1.5	0.6	1.5	1.8	1.7
Refrigerator	99.7	99.2	99.9	99.5	99.7
Deep-freezer	25.2	26.6	26.3	24.7	26.9

Two phone lines or more	2.9	0.8	1.2	2.1	11.2
One mobile phone at least	97.1	94.6	96.9	98.0	99.9
Two mobile phones or more	75.9	67.4	74.5	82.2	75.5
Cable or satellite TV	59.2	19.2	53.1	72.2	83.6
Satellite dish	16.1	40.7	20.8	8.6	3.1
Digital converter	11.2	21.3	10.8	8.5	6.7
One car at least	70.3	37.2	64.7	81.8	91.1
Two cars or more	24.1	3.5	15.1	32.7	49.5
Solar water heater	83.5	80.4	86.3	82.6	80.2

K. Housing Conditions (Tables 24-35)

The 2016 Household Expenditure Survey indicates that 67.6% of all households resided in owned dwellings, 27.2% of all households resided in rented dwellings, and 5.2% of all households resided in “free” dwellings, “key money” dwellings, or student dormitories. The average size of owned dwellings was 4.1 rooms, and the average size of rented dwellings was 3.0 rooms. The average housing density in both owned and rented dwellings was 0.9 per room. In the upper decile, 81.4% of all households resided in owned dwellings, and 15.4% resided in rented dwellings, whereas in the lower decile 41.4% resided in owned dwellings and 48.4% resided in rented dwellings.

The average value of an owned dwelling in the upper decile was 2.6 times higher than the value of a dwelling in the lower decile (approximately NIS 2,676,000 in the upper decile, compared with approximately NIS 1,012,000 in the lower decile).

Upper-decile households residing in rented dwellings paid an average of NIS 5,297 a month to rent a dwelling with an average of 3.3 rooms, whereas lower-decile households residing in rented dwellings paid NIS 1,826 a month to rent a dwelling with an average of 2.9 rooms.

Table J1. Housing Conditions, Persons Living in Owned Dwellings, by Deciles of Net Income per Standard Person, 2016

Characters	House-holds - total	Lower Decile	Fourth Decile	Seventh Decile	Upper Decile
Owners of dwellings (Percentages)	67.6	41.4	65.5	76.9	81.4
Number of rooms for living in dwelling	4.1	3.5	3.8	4.3	4.8
Average number of persons in household	3.5	5.9	3.7	3.4	2.5
Housing density	0.9	1.7	1.0	0.8	0.5
Value of owned dwelling (NIS thousand)	1,723	1,012	1,336	1,773	2,676

Table J2. Housing Conditions, Persons Living in Rented Dwellings, by Deciles of Net Income per Standard Person, 2016

Living in rented dwellings (Percentages)	27.2	48.4	28.5	19.1	15.4
Number of rooms for living in dwelling	3.0	2.9	3.0	3.3	3.2
Average number of persons in household	2.7	3.3	2.7	2.8	1.9
Housing density	0.9	1.1	0.9	0.8	0.6
Rent per month (NIS)	3,079	1,826	3,033	3,862	5,297

3. TERMS, DEFINITIONS AND EXPLANATIONS

Household: A group of persons sharing the same dwelling most days of the week, and having a shared food expenditure budget. A household includes family members serving in the regular army.

Head of household: The economic head of household is the main earner of the household; i.e., the employed person who usually works more hours per week than other household members. If there are no earners in the household, the head of household is determined by the interviewer.

Arab household: The head of the household is a Muslim or Druze, or is a Christian who resides in a non-Jewish locality.

Jewish household: Household whose head of household is Jewish.

Immigrant: Head of a household who immigrated to Israel from 1990 and onwards and is not an Arab or temporary resident.

Standard person: The size of a household affects standard of living that can be maintained on a given income. To provide a more appropriate basis for comparing the standard of living among households of different sizes, they are usually classified in terms of per-capita income. It is also commonly assumed that the number of persons in a household does not have a uniform or equal impact on the potential standard of living that can be attained from a given income. This assumption is based on the premise that advantages accrue according to household size. Therefore, the number of persons in a household is weighted according to a uniform scale in which a two-person household is the base unit. The larger the number of persons in the household, the lower the marginal value assigned to each additional person in the household. Based on this scale, household size is expressed in terms of standard persons. The full scale is shown in the following table:

Actual number of persons in household	Number of standard persons	Marginal weight per person
1 person	1.25	1.25
2 persons	2.00	0.75
3 persons	2.65	0.65
4 persons	3.20	0.55
5 persons	3.75	0.55
6 persons	4.25	0.50
7 persons	4.75	0.50
8 persons	5.20	0.45
9 persons	5.60	0.40
Every additional person	Every additional standard person	0.40

Earner: A person who worked for pay at least one day in the three months preceding the interviewer's visit.

Employee: A person who worked at least one day for another party in return for daily wages, a monthly salary, piece-work, or any other kind of remuneration, in the three months preceding the interviewer's visit.

Self-employed: Persons working in their own business or farm, who earn their wages out of the income and profits of the business.

Household where the head of the household is an employee: A household where the head of the household is an employee or member of a cooperative (see above, the definition of an employee).

Household in which the head of the household is self-employed: A household where the head of the household works as a self-employed person, including an employer (see above, the definition of self-employed).

Household where the head of the household is not working: A household where the head of the household did not work for even one day over the three months preceding the visit of the interviewer.

Decile: A decile is a group that includes 10% of the surveyed population. Deciles are arranged by income level (the classifying income), from households with the lowest income levels to households with the highest income levels (the top decile).

The income level used to classify households can be either gross or net, per household, per person, or per standard person.

For example, the lowest decile (Decile 1), by gross income of the household, is the group of 10% of all households that have the lowest gross income per household.

Upper limit: The maximum income in each of the deciles according to the variable by which the deciles were classified. For example, in Table 2 the maximum income in Decile 3 is NIS 3,561 according to the variable “net money income per standard person”.

Quintile: A group comprised of 20% of the population (two deciles) according to a classifying variable.

Median income: A measurement of the statistic middle which indicates the income of which half the households earn more and half earn less.

Gross money income of households: The total gross current money income of a household before deduction of compulsory payments (income tax, National Insurance, and Health Insurance contributions). Gross money income includes income of all household members from salaried or self-employed work and from property, interest and dividends, assistance and allowances from institutions and individuals, income from pensions, and any other current income. Gross money income does not include non-recurrent receipts such as inheritance and severance pay. Nor does it include imputations for income from the use of one's dwelling and for various types of in-kind income (non-financial income).

Net money income per household: The gross current money income, after deduction of compulsory payments (National Insurance, health Insurance and income tax). Data on compulsory payments were not obtained directly from the households examined in the survey, but were calculated on the basis of Israeli tax regulations.

Gross income per household: The household's entire gross current money income before deduction of compulsory payments (income tax, National Insurance, and health insurance) of all household members, or non-financial income from services deriving from living in a dwelling owned by the household.

Net money income per standard person: The net household money income divided by the number of standard persons in the household (Table 2)

Net income per household: A household's entire income, including current money income as well as non-money income, which is obtained by estimating the imputation of the value of housing services of the household (See chapter 4, Par. E, Data Processing).

Net income per standard person: The net household income divided by the number of standard persons in the household (Table 1.1).

Capital income: Includes income from property and assets in Israel and abroad, income from interest on deposits and bonds, and dividends from shares.

Income from pensions and provident funds includes income from a pension originating in Israel or abroad, from a provident fund and from training funds.

Income from allowances and assistance: This item includes allowances and assistance from the National Insurance Institute and additional government institutions, such as the Ministry of Construction and Housing, the Ministry of Defense, and the Ministry of Finance, as well as current assistance from other institutions such as yeshivot.

Compulsory payments: Direct taxes applied to current income - income tax, National Insurance contributions, and National Health Insurance. The data on these payments were computed in the household expenditure survey on the basis of Israeli tax regulations, and were not received directly from households.

Current transfers to other households: This item includes expenditures that are not for consumption and includes current transfers in Israel and abroad and money gifts for events.

Selected savings items (Table 1.1): Includes funds set aside for financial savings from life insurance premiums, payments to provident funds, training funds, pension funds and managers insurance, as well as investments in dwelling and mortgage payments.

Total consumption expenditure: A household's total payments for the purchase of goods and services as well as the imputation of consumption expenditure for housing (because the purchase of an apartment is defined as investment and not as consumption). Payments sometimes include interest, delivery and installation fees. The purchase of a product is considered as of the day in which it was received, and

the full sum of the purchase is considered an expenditure for a product on the day the product reaches the dwelling, even if it was only partially paid for by that date. Therefore, advance payments for products or services not yet received, or debts paid for a product that is already in the dwelling are considered an increase in savings rather than as a consumption expenditure.

Money consumption expenditure: The household's actual expenditure on consumption of goods and services, excluding the estimated expenditure on housing services.

Miscellaneous foods: A group that includes food products such as tea, coffee, cocoa, spices, baby food, powders, dry pulses, and natural and vegetarian products, as well as purchases or orders of ready-made food.

Consumption of housing services: The imputed value of the monthly outlay for consumption of owned-housing services, key-money dwellings, and housing provided free of charge (See chapter 4, Par. E, Data Processing).

Dwelling and household maintenance expenditure: A main consumption expenditure group that includes expenditures on water, electricity, gas and fuel for the dwelling; maintenance and renovation of the dwelling; domestic help; and miscellaneous household articles.

Room per dwelling: A room used for living by a household or for other uses, such as for business or rental. The following are not considered rooms: Kitchen, bathroom, toilet room, porch. A half room is counted as a half room.

Room for living: A room that household members use for dwelling purposes. The following are not considered rooms: kitchen, toilet, bathroom, balcony, rooms used only for business or work, and rooms rented to tenants. A half room is counted as half of a room.

Number of persons per room (housing density): Calculated by dividing the number of persons living in the household by the total number of rooms in the dwelling.

Miscellaneous household articles (within the item on Dwelling and Household Maintenance): a group that includes cleaning agents for dishes, laundry, and dwelling; disinfectants, air fresheners, candles, napkins .wipes, etc.

Health insurance: This group includes, since 1997, only payments for **supplemental** health insurance offered by health funds, and policies sold by insurance companies. Payments for state health insurance are considered a tax and fall into the category of compulsory payments.

Other health expenses: This group includes outlays for medications, personal hygiene products, eyeglasses, contact lenses, etc.

Vehicle expenses: This group includes current expenditure on motor vehicles (insurance, fuel, repairs, check-ups, etc.). As of 2013 this item includes purchases of cars and other transportation equipment (additional details are in Methodology – Data Processing).

Other expenses – transportation: This group includes outlays for driving lessons, driver's license renewal, various kinds of haulage, and parking charges.

Other products and services: A "main" consumption group that includes products such as cigarettes, cosmetics, jewellery, as well as legal services.

Durable goods: Goods that can be used recurrently and regularly for more than one year (e.g., a car, refrigerator, a television set, washing machine, etc.).

Ownership of durable goods: The percentage of households in a certain group that own or have use of a certain kind of durable equipment, e.g., the percentage of households in Jerusalem that have a washing machine, a television set, a personal computer, a car, a mobile phone, etc. (Tables 14-23).

Level of religiosity: The main lifestyle of the household members, in terms of religion, by self-definition. The categories were: secular, traditional, religious, ultra-Orthodox (very religious), mixed lifestyle and "other".

District and Sub-District: The districts and sub-districts are defined according to the official administrative division of the State of Israel, which includes 6 districts and 15 sub-districts. In 1972, the Judea and Samaria and Gaza Areas were added to these, to characterize the Israeli localities and their population, which are located in these areas. As of August 2005 – the Judea and Samaria Area.

4. SURVEY METHODS

A. General

From 1997-2011, the CBS investigated household incomes in two separate surveys: The first was the Household Expenditure Survey (the survey sample included an average of about 6,000 households, annually); the second one was the Income Survey, which was conducted in combination with the quarterly ongoing Labour Force Survey, in which a fourth of the households were asked about their income (the survey sample included an average of about 8,500 households, annually). Data from the two surveys were combined into one system and presented as integrated results. The Integrated Income Survey sample included an average of 14,500 households, annually.

As of 2012, due to the transition of the Labour Force Survey from a quarterly survey to a monthly one, the Income Survey was removed from the Labour Force Survey, and instead the Household Expenditure Survey sample was expanded by approximately 3,000 households. In 2016, the sample included 8,903 households.

All the data on expenditures, income and compulsory payments in this publication are based on the Household Expenditure Survey.

In 2012, in addition to the expansion of the survey's sample, changes were made in the survey population, in the survey questionnaire, and survey estimates, as follows:

1. The sample population of the survey was expanded and now includes collective moshavim and renewed kibbutzim (which have engaged in a process of privatization). As a result, the population coverage was increased from about 95% to about 97%. However, the coverage still did not include collective kibbutzim and Bedouin residing outside of localities.
2. Definition of soldiers in compulsory military service as employees. Until 2012, the income of soldiers in compulsory military service was included in "other income from work". However, in accordance with the ILO Conventions and Recommendations, the CBS, like most other countries, decided to make a change in the method of measurement (accordingly, to measure the entire labour force instead of the civilian labour force). This was done by adding soldiers in compulsory military service to the labour force in Israel. Following

this decision, as of 2012 the income of employees also includes the income of soldiers in compulsory military service.

3. Augmenting the sample among the Arab population of northern localities. The sample was augmented to provide more reliable estimates of the Arab population.
4. Changing the estimation method. The estimation method is intended to reduce sampling errors as well as biases that can occur due to differences between the characteristics of the households that did not respond to the questionnaire and those that responded. As of 2012, estimation of the population in the Household Expenditure Survey was adjusted to the new structure of the monthly Labour Force Survey.

Most of the changes mainly affect household and individual income. Therefore, as of 2012, there is a break in the series of income data compared with previous years.

Goals and uses of the survey: The survey aims to obtain data on the components of household budgets, as well as additional data that serve to characterize the standard of living of households, such as consumption patterns, leisure activities and entertainment, level and components of nutrition, level and components of income, and housing conditions. The survey is also used for market research, for designing models to predict consumer behavior, for research on liability for indirect taxes among various population groups, etc. One of the most important uses of the survey is to determine weights for the consumption basket of the Consumer Price Index, as well as calculating income distribution and the poverty threshold.

Survey population includes the entire urban and rural population except for non-privatized kibbutzim and Bedouins.

In 1997-2011, collective kibbutzim and moshavim were not included.

In 2000 and 2001, the population of East Jerusalem was not surveyed due to difficulties encountered in data collection. However, as of 2002 this population has been included again in the survey.

Investigation unit: The investigation unit was defined as a household, i.e., a group of people living in the same dwelling most days of the week, with a shared budget for food expenditures.

B. Sampling Method

(1) Sampling Model and Probability

A two-phase sample was drawn for the survey: in the first phase, a sample of localities was selected; and in the second phase, dwellings were sampled from the chosen localities.

The final sampling probability for dwellings in Arab localities in the Southern District was 1:128, for dwellings in Arab localities in the Sub-districts Yizre'el-Afula and Yizre'el-Nazareth and the Sub-district Haifa it was 1:148, and for dwellings in the rest of the localities it was 1:192. The sampling probability was determined on the basis of estimates of the anticipated proportion of non-respondents in the survey, the planned size of the sample, and an estimate of the total number of households in the survey population in the middle of the survey year, and the need to augment the localities defined above.

(2) Sampling of Localities

The localities sample was drawn from a list of localities belonging to the sample population (called “the frame for sampling the localities”). The size of each locality in the survey population was calculated – the most updated estimate of the total number of households.

A total of 252 localities were included in the sample.

The largest localities in the sampling frame, where approximately 82% of all households of the survey population reside, were included as a take-all sample. Each locality constituted a separate sampling stratum.

The remaining 920 localities in the sampling frame were distributed among the sampling strata on the basis of their similarity in terms of different variables such as type of locality, socio-economic characteristics, and geographic proximity to one another. Interviewing quotas were allocated to each sampling stratum (each quota comprised approximately 13 dwellings in the gross sample), in accordance with the size of the sample. The localities were arranged separately for each stratum on the

basis of various characteristics, and a random-systematic sample of localities was drawn in accordance with their size. Altogether, 167 probability localities were included as a take-some sample.

For List of Localities, by Size and Type of Locality, 2016 – see page 61

(3) Sampling of Dwellings from the Sampled Localities

A sample of dwellings was drawn from each of the sampled localities, usually from sampling frames that were prepared from a dwelling registry based on municipal property tax files of local authorities, or from lists of households obtained from the administrative offices of the localities (usually in small localities).

In each locality, whenever possible, the dwellings in the sample were classified within the sampling frame before a sample was drawn, according to geographic characteristics in the sample, in order to maximize the geographic distribution of the sample across the locality. A random-systematic sample of dwellings was drawn, based on parameters that would ensure a final sampling probability for each dwelling as planned.

Altogether, 12,983 dwellings were sampled from the dwelling registry sample and from household lists obtained from the secretariats of small localities.

(4) Complementary Samples

The dwelling registry and household lists in small localities do not cover all of the dwellings occupied by households in the survey population. In order to reduce this non-coverage, complementary samples were drawn from additional sampling frames for the following sub-groups:

- New dwellings occupied after the last update of the dwelling registry - 170 dwellings in all.
- Dwelling units in student dormitories at the seven large universities – 25 dwellings in all.
- Dwelling units in immigrant absorption centers – a total of 8 dwellings.
- Dwelling units in assisted living plans that are not covered by the municipal tax – a total of 13 dwellings.

The total number of additional dwellings was 216, bringing the final sample to 13,199 dwellings.

(5) Allocation of the Sample over the Survey Investigation Year

In addition to representing population groups, the survey aims to represent all of the periods in the investigation year. Therefore, the interviewing quotas were allocated by weeks so that a balanced sample would be obtained for each quarter-year, by various socio-economic and geographic characteristics.

C. Investigation Method and Survey Period

Collecting the survey data: Data were collected from each household in an integrated manner, as follows:

- (A) A questionnaire on the household's structure, filled out by the interviewer. The questionnaire includes basic demographic and economic data on each member of the household (e.g., age, sex, country of birth, year of immigration, status at work, etc.)
- (B) A bi-weekly diary, in which the household recorded each member's daily expenditures over a period of two weeks.
- (C) A questionnaire that examined large or exceptional expenditures and income. The questionnaire filled out by the interviewer on the basis of reports from the household relating to the 3-month or 12-month period preceding the date of the interview (depending on the rarity of expenditures for the items investigated).

Survey period: The data were collected in the field over a period of approximately 13 months, beginning in January of the survey year and ending in January of the subsequent year. Investigation of the sample was spread across the entire survey period, so that all weeks in the investigation period would be represented.

Estimates of expenditures obtained from the diary are approximations of expenditures made during the survey year. The estimates obtained from the questionnaire pertain to a 15-month period (from October 2015 to December 2016), or a 24-month period (from January 2015 to December 2016), according to the type of expenditure.

D. Results of the Field Work

Of the 13,199 dwellings sampled, there were 1,396 dwellings (10.6%) that should not have been investigated, as specified below:

Dwellings	Absolute numbers	Percentages
Total dwellings that should not have been investigated	1,396	100.0
Vacant	628	45.0
The occupants have another permanent address in Israel	245	17.6
The occupants are households that do not belong to the survey population	71	5.1
Used as businesses, institutions, etc.	183	13.1
Demolished, abandoned, or under construction	143	10.2
Errors in sampling frames	126	9.0

The 11,803 dwellings that met the investigation criteria were occupied by 11,909 households belonging to the survey population. As expected, most of the dwellings were occupied by one household, and only 0.81% were occupied by two households or more.

Of the 11,909 households in the dwellings that met the investigation criteria, 25.2% were not included in the survey estimates: 2,996 of these households were not investigated, and 10 were disqualified at the editing stage.

Thus, a total of 3,006 households were not included in the estimates, as shown below:

Households	Absolute numbers	Percentages	Percentages
Total households for investigation	11,909	100.0	-
Not investigated – total	2,996	25.2	100.0
Refused	1,367	11.5	45.6
Not at home	472	4.0	15.8
Communication, difficulties, illness, etc.	981	8.2	32.7
Not located and other difficulties	176	1.5	5.9
Investigated – total	8,913	74.8	100.0
Disqualified in editing	10	0.1	0.1
Included in survey estimates	8,903	74.7	99.9

Among the households that were not investigated, some refused to participate in the survey, some provided only limited information on household characteristics in Questionnaire A, and a few began to fill out a diary but did not complete it.

Households not investigated	Absolute numbers	Percentages
Households not investigated – total	2,996	100.0
Did not respond at all	2,096	70.0
Responded to Questionnaire A at least	900	30.0

E. Data Processing

Editing and coding: Questionnaires submitted by households underwent initial editing at the district offices of the Central Bureau of Statistics. Afterwards, the questionnaires were sent to the subject unit at the main office for data entry, which included keying in, editing, checking for logic and quality, and coding of goods.

Estimating the components of the household budget: Most of the estimates of consumption were obtained on the basis of **net expenditure** for the purchased good, i.e., the positive difference between the household's expenditure for the good, and receipts (if any) from the sale of the same type of good. For example, the difference between a household's expenditure for a new refrigerator and its receipts from the sale of an old refrigerator constitutes that household's estimated expenditure for the purchase of a refrigerator. This method was used for most goods and services in the survey.

As of 2013, **expenditure on a purchase of a motor vehicle** was obtained on the basis of net expenditure as well. Until 2012, purchase of a motor vehicle was defined in the Household Expenditure Survey as an investment product. This definition originated from the old classification of a motor vehicle as an asset or capital product (like a dwelling) and not as a durable good. Additionally, in the item "Transportation and communications" of the Household Expenditure Survey, the component "consumption of motor vehicle services" was included in "owned motor vehicle". Additionally, expenditure on a motor vehicle was estimated on the basis of "value of services" received from the asset. Furthermore, until 2012, the value of services received from the asset was estimated for each household that owned a motor vehicle according to the depreciation of the asset and the interest that would have otherwise accrued on the capital which was invested in that asset. The alternative interest was imputed as income for that household as well.

However, in accordance with international definitions and the treatment of purchase of a motor vehicle in the Consumer Price Index basket, purchasing a motor vehicle was no longer viewed as an asset. As of 2013, the purchase of a motor vehicle was equated to the purchase of any other durable good.

Housing

The two main components of housing expenditure are rent payments in rented dwellings and consumption of housing services in owned dwellings. For rented dwellings, the rent expenditure was obtained directly from the households that occupied the dwellings. For owned dwellings, consumption of housing services was imputed on the basis of weighted rent in other dwellings of the same size in the same locality or in similar parts of the country.

The imputed data on rentals in 2016 were obtained from three sources:

- (1) The current survey of rentals, which was conducted within the framework of the Consumer Price Index;
- (2) Rental data on households living in rented dwellings, from the Household Expenditure Survey itself;
- (3) Outside sources.

For key-money dwellings, consumption of housing services was calculated by imputing the difference between actual rent paid and the full amount of rent

according to average rental rates on the free market, as obtained from the three above-mentioned sources.

Imputations from outside sources were performed on several additional budget components, when the households did not provide data on these items. Imputations were also conducted for items that usually have uniform prices, or items that have a known method of calculation: various fees (such as motor vehicle licenses), the values of motor vehicles and compulsory payments (income tax, national insurance and national health insurance).

All budget components for each household were reduced to a common denominator: an estimate per month at a uniform price level of the mean of the survey period. Hence, the expenditures culled from the diary were multiplied by 4.34 to convert them to a monthly value, and the estimates based on the questionnaire were obtained by dividing by 12 or by 3, depending on the period to which the question referred.

The average price index for the period of the 2016 survey was 220.59 points, base 1993 = 100.0 points.

Estimation method: The method aimed to minimize potential sampling errors and biases deriving from the fact that households that did not respond to the survey may have characteristics that differ from those of the participating households.

In order to obtain estimates for the entire survey population, a "weighting coefficient" was determined for each household investigated, with all members of a given household having the same weighting coefficient. A household's weighting coefficient reflects the number of households and persons in the survey population represented by that household.

The set of weighting coefficients was derived in a multi-stage process by the "Raking" method, in which the distribution of the weighted sample is adjusted to ensure consistency with external distributions according to selected distribution variables. The adjustment was performed separately for characteristics of households and for individuals (without combining the two) in each of the distributions.

For households, the adjustment was made for two groups:

1. The population of Jewish and mixed localities.
2. The population of non-Jewish localities.

For these distributions, the division differs according to household characteristics:

- Homogeneous groups of households in terms of their expenditure, determined by statistical methods.
- Groups by type of households, defined according to household size and age composition of household members (elderly persons living alone, young couples, households with children, etc.).
- Groups of households defined on the basis of the time they were investigated. These groups were intended to balance the weighted sample over the survey year, and to prevent biases that might result from the fact that the survey sample was not retroactively distributed over the months of the year in a uniform manner due to fieldwork constraints.

The distributions by characteristics of households, to which the survey data were adjusted, were obtained from estimates of the Labour Force Survey, which is based on a large sample.

With regard to persons in households, the weighting coefficients for the various groups of households were determined in a way that would also assure full correspondence between the survey estimates and the distribution of the survey population by sex and age groups in geographic cross-sections based on the current demographic data of the Central Bureau of Statistics.

F. Reliability of the Estimates

The estimates presented in this publication are based on a sample survey, and may therefore be subject to two main types of errors:

- (1) **Sampling errors** arise from the fact that the survey investigated only one sample of households and their individual members, and did not cover all the households and individuals in the population.
- (2) **Non-sampling errors** result from other factors that may be present, even when a full census of the entire population is conducted.

(1) Sampling Errors

The sample on which this survey is based is one of very many possible samples of the same size that could have been drawn from the same population by the same method.

Estimate X' is the estimated value, based on the specific sample of this survey, for the corresponding value X that would have been obtained if a full census had been conducted.

The sampling error of the estimate, $\sigma(X')$, is the mean difference between all estimates that could have been obtained from all possible samples of the same size and the same method, and the value that would have been obtained if a full census had been conducted under the same data-collection conditions.

In some cases, it is convenient to estimate the accuracy of the estimates on the basis of the **relative sampling error**, which is defined as the sampling error of the estimate divided by the estimated value.

The confidence interval for the estimate is an interval that contains the census value X at a given predetermined level of confidence. The estimate X' , based on the sample, and the estimate of its sampling error, $\sigma'(X')$, make it possible to construct a confidence interval at a predetermined confidence level, so that the interval contains the census value X at the stipulated confidence level.

The confidence interval is usually presented at a confidence level of 95%. Therefore, the boundaries of this confidence level are calculated as $X' \pm 2\sigma'(X')$. For every table in this publication, the sign " \pm " and the values of the two sampling errors for this estimate are presented beneath the estimate (in small letters).

Example: According to Table 7, the estimated average monthly expenditure for women's outerwear per household in households with 2 earners is NIS 186, and the 95% confidence interval for this estimate is NIS 186 ± 14 , i.e., it can be claimed with 95% confidence that the average monthly expenditure for women's outerwear in households in this group ranges from NIS 172 to NIS 200.

The confidence level can be set higher or lower, and the confidence interval can be computed in the following way:

α	67%	80%	90%	95%	99.5%
$K(\alpha)$	1.0	1.3	1.7	2.0	2.8

where $K(\alpha)$ (the number of sampling errors in either direction) is determined in accordance with the requisite confidence level, α .

Continuing with the previous example: If a higher confidence level of 99.5% (near certainty) is desired, the value of the sampling error is divided by 2 and the result multiplied by $2.8 = K(\alpha)$. In this example, one sampling error of 7 is obtained, and therefore a 99.5% level of confidence will be:

$$186 \pm 2.8 \times (14/2), \text{ i.e. } 186 \pm 19.6$$

It can therefore be argued with almost total confidence (99.5%) that the average monthly expenditure for women's outerwear, in households where there are 2 earners, ranges from NIS 166.4 to NIS 205.6.

Notes:

1. The confidence intervals are usually symmetrical around the estimate, but they are asymmetric for estimates based on a small number of cases in the sample (less than 40). In these cases, both the estimate itself and the estimate of its sampling error are subject to a high error.
2. In order to warn the reader about the use of estimates that are subject to high errors, estimates with relative sampling errors between 15% and 30% are shown in parentheses "()", and estimates with relative sampling errors of over 30% cannot be published, and "—" appears instead.

Comparisons of Estimates Related to Mutually Exclusive Groups

Sampling errors can be used to compare estimates related to mutually exclusive population groups (e.g., households of different sizes) and to determine whether the difference between the two groups is statistically significant.

If the estimates for Group 1 and Group 2 are $X'(1)$ and, $X'(2)$, respectively, the estimated difference between the groups is $D' = X'(1) - X'(2)$.

In order to determine whether $X'(1)$ is different from $X'(2)$ in the population itself, it is necessary to determine the sampling error of the estimated difference, D' :

$\sigma'(D') = \sqrt{\sigma'(X'(1))^2 + \sigma'(X'(2))^2}$, where one sampling error of the estimates is obtained by dividing the values shown in the tables by 2.

If $\sigma'(D')$ is given, it is possible to determine a confidence interval for the difference at a confidence level α : $D' \pm K(\alpha)\sigma'(D')$.

If the confidence interval contains the value 0, the difference D' is not statistically significant. In other words, on the basis of the specific sample in the survey at the stipulated confidence level, it cannot be argued that $X'(1)$ is different from $X'(2)$ in the population itself (even though the two values are different in the sample).

If the confidence interval does not contain the value 0, there is a statistically significant difference between the two groups, and at the stipulated confidence level the difference will be between $D' - K(\alpha)\sigma'(D')$ and $D' + K(\alpha)\sigma'(D')$.

For the reader's convenience, a chart is attached at the end of the Hebrew Introduction and can be used to obtain 95% confidence intervals for the difference between mutually exclusive groups. The chart should be used in the following way:

For the estimates and sampling errors presented in this publication, the tables present two confidence intervals for the two estimates $X'(1)$ and $X'(2)$. These values are marked in the two columns at either end of the chart. If a line is drawn between them, the value $\sigma'(D')$ will be found in the middle column in the figure. (To facilitate use of the chart, the scale of the limits can be adjusted.) If, for example, for two estimates, the values of two sampling errors are 120 and 150, they can be divided by 2, with the results of 60 and 75, respectively. The line connecting 60 and

75 in the extreme columns intersects the middle column at the value of 96.

Therefore, the value of the two sampling errors of the difference is $192=2*96$.

If the difference D' is smaller than $2\sigma'(D')$ in absolute terms, the difference is not statistically significant. I.e., according to the specific sample in the survey, at the set confidence level, it is impossible to state that X1 is indeed different than X2 in the population itself (despite the fact that in the sample they are different).

If the difference D' is greater than $2\sigma'(D')$ in absolute terms, the difference is statistically significant and lies within the range $D' \pm 2\sigma'(D')$.

Example: Based on Table 8, average monthly expenditures for health insurance (in NIS) are compared for households in different cities, at a 95% confidence level.

Average expenditures for maintenance and renovation were:

NIS 135 ± 23 for households in Jerusalem.

NIS 245 ± 37 for households in Tel Aviv-Yafo .

The question is whether the difference between these groups is statistically significant. Based on these estimates alone, there would appear to be a difference in average monthly expenditures for maintenance and renovation by households in Tel Aviv-Yafo versus Jerusalem.

This difference is estimated at $D' = \text{NIS } 110$ ($245-135=110$).

According to the sampling errors chart that appears at the end of the Hebrew introduction, the line connecting 23 and 37 in the extreme columns intersects the middle column at 43, and therefore the value of the two sampling errors of the difference is 43. One may calculate a 95% confidence margin for the estimate of the difference: $D' \pm 2\sigma'(D') = 110 \pm 43$.

This range does not contain the value 0 [the difference is between NIS 110 and NIS 43]. Therefore the difference D' is statistically significant. That is, for the specific sample in the survey, at a 95% confidence level, it can indeed be concluded that the average monthly expenditure for maintenance and renovation by households in Tel Aviv-Yafo is different from the average monthly expenditure for the same purpose by households in Jerusalem.

A more accurate computation of the two sampling errors of the difference is based on the following formula:

$$2\sigma'(D') = 2 * \sqrt{(37/2)^2 + (23/2)^2} = 2 * 21.8 = 43.6$$

(The result obtained through using the chart).

Ratio of estimates among mutually exclusive groups: The ratio R' of $X'(1)$ to $X'(2)$ for two mutually exclusive groups, 1 and 2, is estimated as follows:

$$R' = \frac{X'(1)}{X'(2)};$$

And the estimate for the sampling error of the ratio estimate $\sigma'(R')$ will be:

$$\sigma'(R') = R' * \sqrt{\left(\frac{\sigma X(1)}{X'(1)}\right)^2 + \left(\frac{\sigma X(2)}{X'(2)}\right)^2}$$

Therefore, a 95% level of confidence for R' will be $R' \pm 2\sigma'(R')$.

If the confidence interval includes the value 1, the ratio is not significantly different from 1.

If the confidence interval does not include the value 1, the ratio is significantly different from 1 and falls within the aforementioned confidence interval.

(2) Non-Sampling Errors

The obtained estimate and its sampling error make it possible to deduce the census value. However, this value may be different from the real value for the population because it may be affected by non-sampling errors. In this survey, these errors fall into the following categories:

- 1. Non-response biases:** About 28.1% of the households that should have been investigated in the sample did not participate in the survey for various reasons (see Section “Results of the Field Work”). Since the characteristics and consumption habits of this group of households may be different from those of households that participated in the survey, the survey estimates may be biased.

The method of estimation used in the survey (“weighting”) substantially reduces errors of this type but does not eliminate all of them.

2. Response errors: The survey estimates are based on data provided by interviewees and, therefore, may be subject to response errors.

The detailed expenditure records in the biweekly diaries were not always complete and accurate. Deficiencies in recording may be attributed to several causes: the family got tired of keeping the diary during the course of the two-week period; omission of "small" expenses (such as children's pocket money and purchases at kiosks, etc.); deliberate omission of "socially unacceptable" expenses (such as alcoholic beverages, gambling, etc.); insufficient detail in the list of purchased products; inclusion of purchases made prior to the two-week period of the diary; and omission caused by failure to keep a current record of expenses as they are incurred.

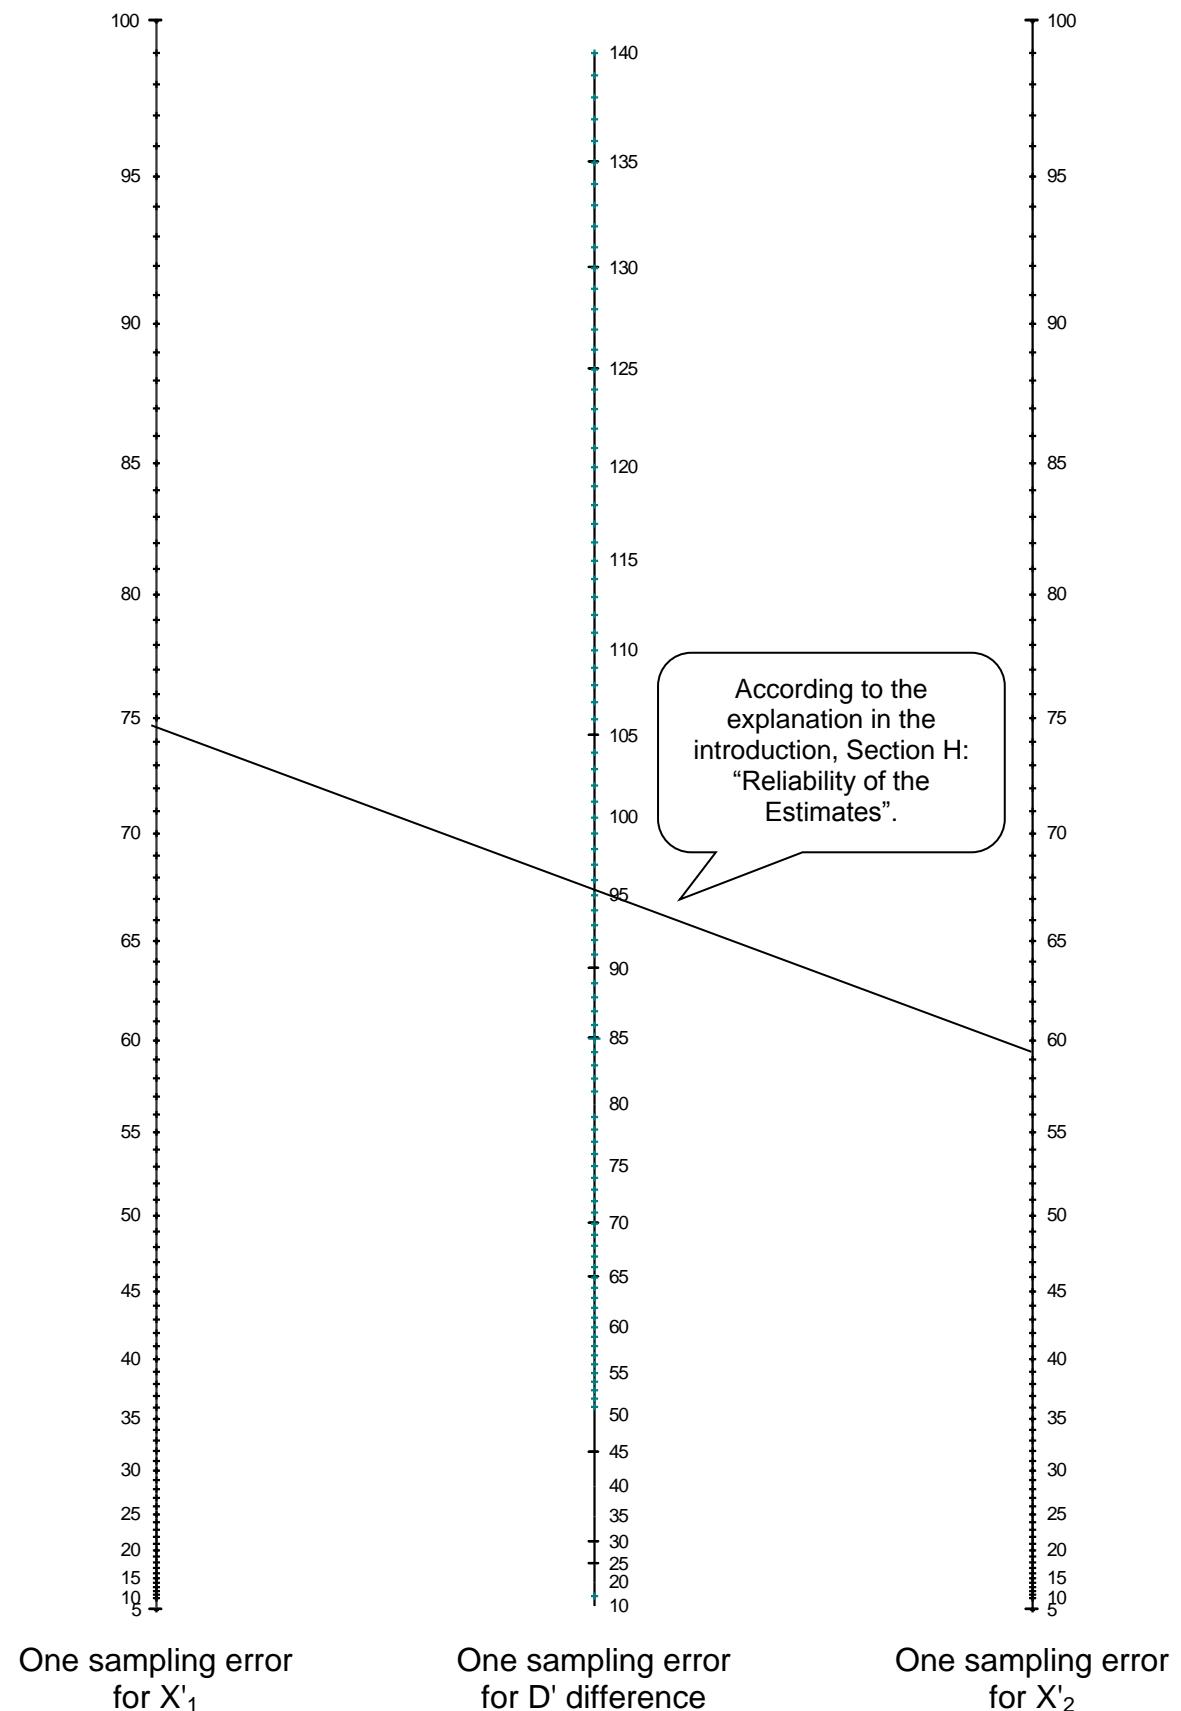

Information collected about the various questionnaire items may also be subject to errors of various types. Since the responses were based on interviewees' memory (with reference to three months or an entire year), some current expenses may be excluded or, alternatively, expenses incurred prior to the relevant period may be included. Inaccurate reporting of details related to various expenses may also be caused by reliance on memory - unless the information is based on documents. Moreover, response errors may be generated by misinterpretation of the questions or failure to follow instructions for filling out the questionnaire.

The interviewers asked household members to base their reports on documentation, and in cases where data seemed unreliable they would return to the households and make corrections when necessary. Despite these attempts, and notwithstanding various tests performed in the course of data processing, the responses may still contain inaccuracies that can bias the survey estimates.

3. Processing errors: In the various stages of processing, which include entry of data from the questionnaires, coding the commodities, and logical checks, there is potential for errors that affect the reliability of the estimates.

It is usually very difficult, if not impossible, to estimate the effect of non-sampling errors on the survey estimates. Nevertheless, it should be noted that the biases caused by these errors are sometimes in opposite directions and may therefore partially offset each other.

A Chart for Finding the 95% Confidence Interval for the Difference between Groups

List of Localities, by Size and Type of Locality, 2016

Type of Locality	Name of Locality	Locality Code

TABLES

As of 2012, Tables 2.1–2.2 thru 11.1–11.2 were united and appear as Tables 2–11, since as of that year Income and Expenditure data are taken from one source – Household Expenditure Survey

(PRESENTED IN HEBREW ORDER – FROM RIGHT TO LEFT)

EXPLANATORY NOTES

Area Covered by the Statistical Data

The statistical data relate to the economic territory of the State of Israel, unless otherwise stated.

A. The economic territory of a country (according to the definition of the OECD-SNA. For a detailed definition, see: OECD, Glossary of Statistical Terms):

The economic territory of a country consists of the geographic territory administered by a government within which persons, goods and capital circulate freely.

The economic territory of the State of Israel: According to this definition, the economic territory of the State of Israel is as indicated in paragraph B, below.

B. District and Sub-District: The districts and sub-districts are defined according to the official administrative division of the State of Israel, which includes 6 districts and 15 sub-districts.

Including Israeli localities in the Judea and Samaria Area.

Special Symbols in the Tables

Blank space = no cases.

() = estimates with high relative sampling errors (between 15%-30%).

~ = not for publication (sampling error of over 30%).

± = the range of sampling errors above and below the value of the estimate.

n.e.c. = not elsewhere classified.

- (1) This budgetary item is included in expenditures not for consumption and includes current monetary transfers in Israel and abroad and monetary gifts
- (2) Item not published last year.
- (3) Until 2012, included in "other flour"
- (4) Until 2012, included in "various cereals"
- (5) Until 2012, included in "rice"
- (6) Until 2012, included in "snacks".
- (7) Until 2012, included in "frozen dough"
- (8) Pastry products, frozen - incl. frozen bourekas, frozen pizza, frozen blintzes, and other frozen pastry products.
Pastry and pastry products, not frozen - incl.
bourekas, pancake, croissant, and other not frozen products.
Other products from grains and pastry, frozen - incl.
frozen eggrolls, frozen dumplings, frozen cigar-shaped appetizers, frozen ravioli
frozen kubbeh etc.
- (9) Until 2012, included in "sunflower oil, corn oil and other oils"
- (10) Fresh fish - incl. carp, tilapia, mullet, bass, denis, etc.
Other fish, including: Salmon, Bakalao etc.
- (11) Until 2012, included in "soft white cheese".
- (12) Until 2012 it was included in "baby food"
- (13) Incl. yogurt, milk and cheese delicacies and cheese replacement made from soy or tofu.
- (14) Until 2012, included in "other dried fruit"
- (15) Other tradesmen, incl. glass cutter, exterminator, gardener and others.
- (16) Incl. paint, whitewash, electrical tools such as drills, and non-electrical tools such as rakes.
- (17) Mainly incl. bags, wax paper, aluminum foil, clothespins and matches.
- (18) Incl. community tax, education fee, mutual responsibility and other municipal taxes.
- (19) Incl. kitchen table and chairs and service closet. In previous years it was included in "outdoor furniture".
- (20) Incl. cooking and baking stove, baking stove only, ventilation hood, grill, toaster oven or toaster, microwave and stove-topfor cooking
- (21) Incl. dishwasher, mixer and food processor, electric frying pan, electric juicer, hotplate, coffee maker, water purification device, and other electrical kitchen appliances.
- (22) Incl. strainers, graters, soda water apparatus, and other kitchenware.
- (23) Not including health tax.
- (24) Incl. expenses for orthodontist, oral surgery and x-rays.
- (25) Until 2012, fees for private physicians and specialists at Health fundss were separated.
- (26) Incl. bandages, Q tips, thermometer, etc.
- (27) Until 2014, included in "Drama and dance lessons and courses"
- (28) Incl. professional courses, computer courses, natural sciences courses, and preparation courses for screening exams and others.
- (29) Since 2016, includes other transmission, such as Internet or satellite dish by Monthly payment
- (30) As of 2013, "consumer services for owned car" was replaced with "buying a car". See introduction.
- (31) Until 2014, included in "Legal services".

- (1) סעיף זה כולל הוצאות שאינן לתצתורת וככל העברות כספיות
שוטפות בראץ ובחול ונתנות כספיות לאירועים.
- (2) מוצר שלא פורסם בשנה הקודמת.
- (3) עד שנת 2012 כולל ב"קמח אחר".
- (4) עד שנת 2012 כולל ב"דגנים שונים".
- (5) עד שנת 2012 כולל ב"אורז".
- (6) עד שנת 2012 כולל ב"טיפוס".
- (7) עד שנת 2012 כולל ב"צביך קפוא".
- (8) מוצר מאפה מבזק קפואים מולדים: בורקס קפוא, פיצה קפואה,
בלינץ' קפוא ודבר מאפה פראום אחרים.
- (9) מוצר בזק לא קפואים כוללים: בורקס, פנקייק, קרואוון
ובביר מאפה לא פראום אחרים.
- (10) מוצרים אחרים מבזק דוגניים - קפואים מולדים: אגרול קפוא,
יכסים קפואים, סיגרים קפואים, רביולי קפוא,
קובזה קפואה וכדומה.
- (11) עד שנת 2012 כולל ב"שם חמניות, תירס ואחרים".
- (12) דגים מסוימים כולל דגים בסוג סלמון, בקרל, בס, דביס, מושט וכדומה.
- (13) כולל: מיען, יוגרט, משקה גבינה וחילוף גבינה העשויים מסונה או טופו.
- (14) עד שנת 2012 כולל ב"פירות יבשים אחרים".
- (15) בעלי מלאכה אחרים מולדים: זג'י, מדברים, גנים ואחרים.
- (16) כולל בעז וסיד, כל' שעודה חשמליים כגון מכדרה, ולא חשמליים
כגון מגנטה.
- (17) כולל בעזר: שקיות למיניהן, כיר אפייה, נייר אלומיניום,
אטבים וגפרורים.
- (18) כולל: מס קהילתי, אגרת חינוך, מס איזון ומס יישוב אחר.
- (19) כולל שלוחן מטבח, סאותה לטבח ואורו שירות.
- (20) בשנים שעברו כולל ב"ירחות לנו ולמרפסת".
- (21) כולל: תנור לבישול ואפייה, תנור לאפייה בלבד, קולט אדים, אריל,
טוסטר או טוסטר אובון, פירירגאל, ווריים לבישול.
- (22) מהותם מיץ חשמלי, מכונת קפה, מתיקון חשמלי, פלטת שבת,
ומשרי שחולן ארורים או מבוקחים.
- (23) כולל: מסנן, פפמיות, מכשיר להנקנת סודה,
מזרעולי אולר וכייל מטבח אחרים.
- (24) כולל חולצות ברוור אורתודונטייה, ניתוח פה ולסת וצילומי שיניים.
- (25) עד שנת 2012 תשלומים לרופא פרטי ורופא מקצועני בקופ"ח
חופשי בפודר.
- (26) כולל: פלטטים, קסמי אונוניים, מדחום וכדומה.
- (27) עד שנת 2014 כולל ב"שיעורים וקורסים לרדרמה ומוחול".
- (28) כולל קורסים מקצועיים, חוגים בממחבים,
וחוגים למדעי הברען וקורסי הכנה לבחינות מין ואחרים.
- (29) החל מעתה 2016 כולל: שידור אחר, כון אינטנס או צלחת לוין בתשלומים חדשים.
- (30) החל מעתה 2013 בוטל הסעיף: "שירותי צרכיה למוכנית בנסיבות"
ובמקרה נסנו והעף "שירותי מוכנית". ראה מבוא.
- (31) עד שנת 2014 כולל ב"שירות משפט".

(1) As of 2016, an online shopping investigation has been added in Israel and abroad, the distinction between websites in Israel and abroad websites is still not clear to some of the respondents, as a result, in Israel there is no clear distinction between purchases made in Israel and abroad, therefore the answers are exposed to high responding errors in the survey, the Total Internet purchase column includes both.

(2) Incl. surfboards, helmets, heart rate monitor watches, and sports racks, inter alia.

(3) Incl. chargers, speakers and microphones, mouse pads, USB cables and other accessories.

(2) Between the total number of respondents, there were 100% of respondents who purchased from abroad, and 100% of respondents who purchased from Israel.

(3) Between the total number of respondents, there were 100% of respondents who purchased from abroad, and 100% of respondents who purchased from Israel.
